The preparation and custody of medicines, as it was the primitive custom with the princes and great patrons of physick, asserted and proved to be the proper charge and grand duty of every physician successively. The new mode of prescribing, and filing recipe's with apothecaries, manifested an imprudent invention and pernicious innovation. Demonstrated from the treble damage and disadvantages that arise thence: to physician, patient, and the medical science. With enforcing arguments for a return and general conformity to the primitive practice. All objections to the contrary answered and fully cleared. 4°. *London*, 1671.

LETTER (A.) from a physician in the Highlands, to his friend in London, on the subject of a consumptive habit, wherein he demonstrates that temperance, or a proper regimen of diet, a moderate exercise, without the aid of medicine or regard to climate, may with safety be depended on for a cure in all such cases; the whole illustrated by a distinct account of the regimen of diet observed by the oldest men now living in that country, especially of one in the Island of Jura who in his youth recovered a decayed constitution, and tho' confined to a sharp air and a moist climate, yet, by the mere force of temperance, arrived to the age of 119, and enjoyed his health and senses to the last; to which is prefixed the editor's case, which gave rise to the publication of this letter. 8°. *London*, [1747, *vel subsequ.*].

Physical (A) dictionary, or an interpretation of such called words and terms of art as are derived from the Greek or Latin, and used in physick, anatomy, chirurgery, and chemistry; with a definition of most diseases incident to the body of man; and a description of the marks and characters used by doctors in their receipts. Published for the more perfect understanding of Mr. Tomlinson's translation of Rhenodeus dispensatory, and whatever other books of physick and surgery are extant in the English tongue. This dictionary will be as useful and sufficient to all our late English practitioners in physick, or chirurgery (especially such as are not scholars) as any dictionary of ten shillings price. Approved by several doctors, surgeons, and apothecaries; and recommended by them in an epistle to all English practitioners in physick and chirurgerie. 28 l. 4°. *London, J. Garfield,* 1657.

Physician (A). A physical dissertation on drowning: in which submersion, commonly call'd drowning, is shewn to be a long time consistent with the continuance of life, from a variety of unexceptionable tho' surprising facts, related by the most eminent and judicious authors, and confirm'd by incontestable evidence; which facts are reconcil'd and accounted for, from the strictest laws of the animal œconomy. To which is subjoined, the proper measures for recovery and relief; the obligations we lie under to practice them are clearly suggested, and strongly enforc'd; intended for the good of mankind, by restoring life to many persons who are erroneously supposed to be irretrievably drowned. Recommended particularly to the consideration of the navy and army, who have frequent opportunities of practicing the methods recommended. With an appendix, containing some methods for the recovery of those who hang themselves, and of children supposed to be born dead. 80 pp., 1 pl. 12°. *London, J. Robinson,* 1746.
