Personal memo from
JOSHUA LEDERBERG

Dr FL Black ✓
Yale

DEC 4 1994

HLA polymorphism maintenance.

Dear Dr Black –

For the past 20 or 30 years I have queried whether viruses emerging from cells of a given HLA type might not carry a phenotypic auto-tolerant masking. *

Of the host-controlled restriction of bacteriophages, though I had more by way of immune interactions in mind. ?

* and v.v., re rejection of heterologous?

Why else would we have evolved the rejection of allografts?

Do you know of any evidence on this possibility?

Sincerely,
Josh Lederberg
