

July 28<sup>th</sup> 1954

A batch of cultures and  
Phages have just arrived  
from Uetake, mostly groups  
E, E2.

Two of the phage vials were  
empty on arrival, Uetake's 84P  
and EII-3P, two others are rather  
doubtful as the vials were  
open but not empty (EII-1P &  
EII-2P). The two remaining  
Phages & the cultures look O.K.  
I'll sub the latter into stocks.

I thought you might wish  
to mention the receipt of the  
cultures & phages for Uetake's  
Uetake.

Alec
