Dear Lederberg

It was a surprise to see these letters when I opened yours! Thanks for the trouble. Hope you got the anti-λ serum, not as good as I had hoped but I am injecting this rabbit some more; so in a few weeks I hope to have another 50cc of K ≅ 400 to 500. But at K = 150, as the one I sent you it is quite useful.

With your strains so far the results are that they do multiply the λ HFT Gal+ not as efficiently as C600 Gal+ but quite well (Remember: C600 Gal+ multiplies the λ HFT about 50% while) Gal_1^- and Gal_2^- give about 10% and 25% resp. of HFT in their burst of about 60 to 80 ph/bact)

Am preparing the Gal_1^- Gal_2^- and already have the Gal_1^- and Gal_2^- homogenates...

Will keep you posted after the visit of Morse this week end.

Thanks again Weigle.
