

JUN 5 1962

404 S. Grove St.
Waupun, Wisconsin
June 2, 1962

Professor J. Lederberg
Department of Genetics
Stanford University
Palo Alto, California

Dear Professor Lederberg:

I was happy to receive your letter of May 28 and am anxious to spend some time in the library preparing myself with some background articles, however, your secretary apparently misplaced the article you intended to send me since I received only your letter. I will be leaving Wisconsin on Monday or Tuesday (6/4 or 6/5) but if you send the article to me in care of a friend I will be visiting around the 12th of June (Mr. D. May, 7130 Chabot Road, Oakland 18, California), I suspect there will be an opportunity to do some library work before I join your group on July 2nd (July 1st is on Sunday).

Incidentally, a couple of weeks ago I received a report on the work done at Tracerlab with chlorate compounds as oxidizing gas detectors from the U. S. Atomic Energy Commission, but as yet I have not had a chance to study it. I expect to have it digested and know more of its potential usefulness by the 2nd.

Sincerely,

Jerry Lundstrom

*Why don't you drop by the lab here or at least phone?
We have some extensive bibliographies
you might want to chew over.*
