STANFORD RESEARCH INSTITUTE JUN 14 1962

To: J. Lederberg Date: June 13, 1962
From: F. R. Mayo

Thanks for thinking of me, and my apologies for a tardy reply.

At the moment, I don't have any ideas to contribute to the use of biological processes for making inorganic polymers. If Dr. Knox cares to discuss his problem with me, I might get some ideas. Presently, I don't know of any inorganic polymers (except glass and some minerals) of special interest.

F. Mayo

My present approach to polymers of biological interest is to see if I can raise some money for studying rates and equilibria in the copolymerization of phosphoric acid and a number of glycols, and then consider the template aspects of the problem when I have some polymerization data.

I propose to try the NIH or NSF but any suggestion from you is welcome.
