MORSE

11/29/56

I find I have a culture of W3055 which is  
2915(h) but I have no indicator for  $\lambda_h$  (W3140?)  
May be it ~~would~~ be a good idea of along with  
studying  $\frac{2-4+}{2-4-5}$  I should ~~show~~ <sup>show</sup> ~~me~~ <sup>me</sup> to as a  
marker. For this purpose I'd need an indicator  
which you send along with 1210. I find in looking  
through my notes that 2281 (= 1210  $\lambda_h$ ) has given a  
goodly no. of  $\lambda_h$  transduct. with CFT. These results  
are just the early data and may be due also to "old  
 $\lambda$ -sites". To check this, and to see if the  $\lambda_h$ 's from 1210  
are the same is an important step - to find out if one  $\lambda_h$  are  
the same. I believe Esther visited this site, and she may have  
forgotten it too. I'm summarizing CFT  $\times \lambda_h$  data and will send  
along shortly. Larry.
