Dear Joshua & Esther:

2/22/57

While at the Caltech meetings I heard that Calif (Cal Tel.) was getting heterozygotes from Hfs (Hayes) x C crosses. Do you have any info on this? Again people think this may be a characteristic of all KR C crosses. I don't have a copy of Hayes Hfs (W2324?) and would like aggressive one if you can send it. It should have the M⁻ 4p⁺ character if possible. The other day I sent A. Campbell W3079 (rid 4a M⁻ Lac Bac, Gal, 4p⁺ SR) I don't know whether you want to keep a record of that or not.

Sincerely

Larry Morse
