Chatmville, Conn.
August 11, 43.

Dear Heidelberger,

I am glad that you are to write the History of Immunity for Science. You are just the right person to do it. I am taking you at your word and suggesting some changes. I think it may be well to relate Immunity with the Cell-discoveries in immunology just as the stepping for the Graduate in Medicine in 1891 and the Nobel was each of them contributions, Behring's & Diphtheria, Kitasato's, of Inoculation, etc. In a second Immunity we are in the midst of this exciting time in Science: Was Chemical Analysis a mistake? His just published is a little book. We see this influence in the discovery of the Blood Groups, etc. If Tobacco & Wine Immunity came to Nave Comic & it is of great interest & the reader. The Date of the Nobel prize-man's should be given. In Smith at the Institute has it, - was probably it is in Nov. 1901.

You comment a great deal in your words. Some I doubt the desirability of giving the experimental details in any Essay, Lecture, Speech, as it brings it to a dry Manual. Avoid the Italics & Small Type & Statistical details. As a rule there Abstracts Deal with the General rather than with the specific. This does not apply to the Grouping of the Blood Groups & Isohemagglutinins and the significance of those discoveries.

I am uncertain of the precise language in "Immunity" of the chemical Basis of Immunity. Have we included Some had already? The point is an excellent one and it is desirable & Please see reference to Mrs. Richards.

The rest of the orchestra is excellent. You can't know quickly
feel it - out of scope. The emphasis on personal traits is commendable
desirable. This could even be expressed with interest if there is
more to say. I am glad you settled in the town of Munich.

I hope all is well with you, Nina's Charles. I suppose we shall
you can't spend the summer in Munich or Berlin pleasantly too?
We did not venture so far afield this summer. We are all well.
Helen joins me in affectionate regards to you & Nina.

Yours sincerely

Arthur Farwell.
