Price List of  
Pharmaceutical Preparations

From the Laboratories of  
THE  
UPJOHN PILL & GRANULE CO.  
KALAMAZOO, MICHIGAN.

NEW YORK, 92 Fulton Street.

LONDON, 104 Golden Lane.

Cable Address, "Friable" New York.

## Relating to Our Goods.

The commercial manufacture of pills has grown to occupy a conspicuous place in modern pharmacy, and, owing to the marked improvement in the physical condition of commercial pills as compared with that of former times, it is no longer necessary for the dispensing pharmacist to resort to extemporaneous preparation of pill formulae.

When permanency of product, accuracy of subdivision and honesty of purpose can be relied upon, the advantages to be gained by resorting to the use of pills made in a large way by some reliable house are very manifest, and, from these standpoints, great care should be exercised in the selection of a line of goods for use in the dispensing case. 

From the outset our aim has been to produce a line of pills that would meet the requirements of the profession and the trade and not be subject to the deteriorating influence of age. If the increased proportions of our business can be looked upon as an index to the measure of success attained, we certainly have ample assurance that our products have been highly acceptable; in fact, the business has long since outgrown our expectations, and we have been obliged, from time to time, to increase our plant to meet the ever-increasing demand.

The "Friable Pill" has ceased to be a novelty, and has grown to a recognized position in the foreground of progressive pharmacy. It may not be out of place, however, to point out some of the peculiar characteristics of our goods, in contradistinction to pills made by the use of methods employing some gummy excipient or agglutinating material.

## Physical Condition.

(Friability)

By examining the physical condition of our pills it will be observed that most of them can readily be crushed and reduced to a powder by pressure under the thumb, showing a friable condition not found in pills made by any other process.

This distinguishing feature of our pills is permanent, and as they are all made without excipient or pressure, the process employed leaves the pills in a dry, powdery and porous condition, which does not harden by age, and insures their rapid disintegration by the digestive juices, leaving the drug in the same condition for absorption as when administered in powdered form.

This condition of friability is, of necessity, subject to certain variations in degree in the large numbers of formulae appearing on our list.

A pill may be extremely friable, admitting of being crushed by slight pressure under the thumb, a condition typical of a great majority of goods of our manufacture.

Again, a pill may be friable and still be broken with some difficulty by pressure under the thumb. In many such instances the firmer condition is accounted for by the necessity of a thicker, although not less soluble, coating.

## Coating.

(Important)

The pill coating is an important feature that should engage the attention and careful inspection of every pharmacist and physician; therefore we take the liberty of presenting a few points on that subject.

In coating Mass pills, it is necessary, in order to retain sufficient moisture to keep the mass soft, even for a short time, to use some impervious sub-coating. This is accomplished by using some insoluble material (frequently shellac) as a

sub-coat, and afterwards coating in the regular way with sugar or gelatin.

It will be readily understood that while this does not prevent the pill from drying out and becoming hard after a little time, it does materially retard its solution and frequently prevents it entirely.

In view of these facts it appears to us that by doing away with the mass entirely and using no excipient, the presence of moisture in the pill is rendered unnecessary, as the dry powdered drugs will not harden as when mixed with some gummy excipient. Thus the necessity of an impervious and insoluble coat is obviated, and we are enabled to use a coating that is simply protective to the dry drug inside and conceals the taste, but dissolves immediately when taken into the stomach.

It will be noted that the coating is nearly as thin as gelatin and by allowing a pill to dissolve in the mouth the solubility of the coating may easily be demonstrated. Having somewhat the appearance of, and a finish superior to, that of gelatin goods, they would ordinarily be pronounced such.

## Solubility.

In the manufacture of so-called soluble pills the word soluble is in a measure misleading. By no manipulation can a chemist render insoluble material soluble by simple change of form. The word soluble has reference only to the coating and the excipient, in case pills are excipiated. With our pills the word soluble has reference only to the coating. It may be that the contents of the coating are soluble or insoluble, as the case may be. Illustrating this point: Quinine is freely soluble in an acid menstruum, but sparingly soluble in a neutral or alkaline menstruum. This is an occasional condition of the stomach in disease and, of course, may be readily counteracted by the administration of acid drinks. We do not claim to change the peculiarity of the drug by incasing it in a coating. An insoluble material is still insoluble, although our pills being made without excipient and being permeable, the opportunity for solution is greatly increased as against the mass pill, which is impermeable to the natural solvent juices.

## Integrity of Goods.

Having attained an enviable reputation for our products, our endeavor is to maintain the high standard of excellence, and, with this constantly in mind, the greatest precaution is observed and care taken in the selection and test of quality of drugs used and in the methods employed. In fixing prices on our goods we give the purchaser the lowest price consistent with the use of the best material procurable, and the full quantity indicated in the formula, making no effort to compete with parties offering manufactured goods for less than the cost of crude materials.

## Subdivision.

In the manufacture of Pills and Granules, the matter of thorough and equal distribution of the ingredient entering into the formula, and the accurate subdivision of the mixed materials, are questions of vital importance in order to secure uniformity of action.

These questions of thorough trituration of the dry powdered drugs and the subsequent accurate subdivision have received much attention at our hands. Our methods of manufacture insure an accuracy of subdivision which is mathematically exact.

We invite critical comparative tests and believe that physicians and pharmacists, who are best qualified to decide this matter for themselves, will have no reason to discriminate against us.

## Requests for Loose Labels.

We have frequent requests for loose labels, but feel obliged to decline to furnish them as we cannot become responsible for goods not labeled under our own supervision. We recognize that in the large majority of cases the requests are made with the idea that our own interests will best be served, and in such instances we regret that we cannot comply, but for the protection at all times of ourselves and our customers we feel that no exceptions can be made.

## Special or Private Formulae.

We have given much thoughtful attention to this department of our laboratory and, by reason of our exceptional facilities for this class of work, can assure our friends of a superior and uniform product when entrusted with private formulae. Our process of making pills is peculiarly well adapted to special formula work in that the pills are not subject to change by age—the physical condition remains the same—friable once, friable always. All special formulae submitted to us we treat confidentially and consider them as property held in trust. Heretofore, we have confined ourselves rather closely to special formulae in pills only; we are also in a position to submit quotations on fluid and tablet work as well, and will give to the work the same careful attention as applies to our pill department. We guarantee quality of drugs and finished product to be of highest standard, and our prices will be as low as possible consistent with the above points. To enable us to give our customers the benefit of a close price, requests for special formulae should be for not less than 5000 pills or 3000 tablets. We shall welcome all orders for, and correspondence touching, special formula work.

†Sometime ago we made for Prof. B. K. Rachford, of the Medical College of Ohio, a quantity of Potassium Permanganate Pills, Salol coated, to be used as an enteric pill. The Salol coating serves to retard the solution of the pill until it reaches the intestinal tract and there acts as an adjunct to the potassium permanganate in preventing fermentative action.

Prof. Rachford's experience seems to have demonstrated that potassium permanganate pills thus prepared can be taken indefinitely without producing the slightest irritation, and in cases of chronic intestinal fermentation accompanied by the formation of leukomains which produce a well-known chain of symptoms, migraine, hysteria, hystero-epilepsy, neurasthenia, neuralgia and many other neuroses, they exert a most salutary influence and in a large per cent. of cases may effect a cure.

The value of this remedy is well set forth in a paper, "Treatment of Leukomain-Poisoning," by Prof. B. K. Rachford, in the Medical News, Sept. 7th, 1895.

‡We furnish all sizes Quinine Pills, colored black, chocolate or coated pink. In the absence of explicit instructions the white coated will be sent.

## §QUININE PILLS

are sold without protection and we do not render credit memorandum in the event of decline in price after purchase is made.

Special prices made on application.

For Quinine Pills in bottles of 5 ozs. see page 47.

For Quinine Pills in pasteboard boxes with perforated diaphragm, or in handsomely lacquered metal boxes, see page 47.

**Note:** Owing to the fluctuation in price of Quinine, we have found it more satisfactory to issue special slips from time to time giving net prices on Quinine Sulphate and Bisulphate Pills. These slips we aim to distribute as issued but will be glad, at any time, to mail upon application.

Quinine, when administered in the form of Friable Pills, has practically the same value as when given in the form of powder or solution, as our pills are simply the pure, dry Quinine encased in a very thin coating of pure sugar which is applied without heat and is intended only as a covering to disguise the bitter taste of the Quinine, and also to prevent the pill crumbling when in transit or when dispensed. No subcoating is used and we guarantee the pills to remain unchanged by age. The ready solubility of the coating and the fact that there is no subcoating may be easily demonstrated by placing one of the pills in the mouth, when, in less than a minute, the coating will completely dissolve, leaving the pure Quinine, which must quickly break down and dissolve when brought in contact with the solvent fluids of the stomach.

While we bottle Quinine Sulphate and Bisulphate Pills in 100's, 500's and 1000's, we would call especial attention to our 5 oz. package as possessing many desirable features. While varying in number of pills according to size, each bottle contains 5 ozs., full weight, of the salt at uniform price—an advantage readily seen by reference to the following table:

	No. of Pills in 5 oz. package
5 ounces Quinine in $\frac{1}{2}$ gr. Pills.....	4,375
5 ounces Quinine in 1 gr. Pills.....	2,185
5 ounces Quinine in 2 gr. Pills.....	1,092
5 ounces Quinine in 3 gr. Pills.....	728
5 ounces Quinine in 4 gr. Pills.....	546
5 ounces Quinine in 5 gr. Pills.....	437

For price, see special slip accompanying list. Please write for quotations in 5,000, 10,000 or larger bulk.

## QUININE PILLS, one dozen in box.

We put up 2 gr. Quinine Pills in slide boxes, either metal or pasteboard, each holding one dozen pills ready for dispensing. The pasteboard slides have a perforated diaphragm, each pill having separate compartment. Put up only in one size package holding one gross of slides containing one dozen pills each, \$5.00 per gross net.

The metal slides are handsomely lettered and enameled, and put up in attractive counter display boxes holding one gross of slides containing one dozen pills each, \$5.00 per gross net.

Box of  $\frac{1}{4}$  gross of slides, \$1.40 per box net.

§These sizes of Salol pills have been particularly recommended as an intestinal antiseptic in the treatment of Diarrhœa, both in adults and infants.

One of the most recently recognized uses of this valuable remedy is for the relief of cystic inflammation. It is spoken of as a specific for this trouble.

From recent investigations and experience of eminent clinicians, we are led to believe that Zinc Sulpho-Carbolate is the ideal intestinal antiseptic for administration in Typhoid Fever, Infantile Diarrhoea, Cholera Infantum, and all allied diseases, where an efficient antiseptic, combined with a mild astringent and stimulant action, is indicated.

## THROAT TROCHES.

The frequent demand upon the general practitioner for an efficient, reliable and at the same time palatable preparation that shall meet the indications in relaxed, irritable or congested conditions of throat or bronchial tubes has led us to list, under the name of Throat Troches, a preparation which will be found to exert a mild local astringent and tonic effect upon the mucous surface, relieving the relaxed or congested condition and allaying irritation. They possess at the same time the desirable features of being convenient for administration and pleasant to the taste.

See page 56.

---

## POWDERED BLUE MASS.

Owing to the impossibility of procuring Blue Mass in fine powder, with the globules of Mercury satisfactorily divided, we have been obliged to resort to the manufacture of this article for our own use in pill making, as our requirements preclude the use of anything but a perfect product. We now therefore offer to our customers this superior article in powdered form.

See page 56.

---

## SACCHARATED EXT. OF GENTIAN.

We have frequently had occasion to manufacture to special order a freely soluble Saccharated Extract of Gentian. The demand has been sufficient to warrant our listing the same.

Its free solubility in water renders it particularly convenient in dispensing in solution where a bitter tonic is indicated, or as an adjunct to other preparations in solution. Its freedom from Tannic Acid makes it especially desirable to dispense with iron salts.

See page 56.

---

## TY-MO-ROL.

TY-MO-ROL is particularly well adapted to meet the demand for an antiseptic solution for use wherever such a preparation is indicated. Its non-toxic properties render it perfectly safe and its efficiency is beyond question, combining as it does the antiseptic properties of formaldehyde, boric acid, thymol, eucalyptus, wintergreen, peppermint and thyme.

For internal administration it is palatable, and when used as a mouth wash or dentifrice it leaves a clean and cooling effect. For local use, wherever desired, it is unexcelled, and can be relied upon to give entire satisfaction.

Put up regularly in one and five pound packages.

For price see page 56.

Special quotations furnished for bulk lots on request.

# HYPO. TABLETS

Our Hypodermic Tablets are freely soluble and contain a small per cent. of boric acid which renders the solution aseptic.

# POWD. EXTS.

## POWDERED EXTRACTS AND CONCENTRATIONS.

We have taken great pains in preparing uniformly good articles in an impalpable powder. In all instances where it is admissible, we use the powdered drug as a diluent, to take the place of the loss of moisture in drying, thus making the powdered extracts fully up to the standard strength of the soft extracts of the Pharmacopœia. In some cases, however, it is impossible to procure the powdered drug in suitable condition to be used as a diluent, and in such cases Sugar of Milk is used.

As Powdered Extracts are hygroscopic the containers should be kept in a cool place, and at all times securely corked.

Special prices quoted for bulk quantities on application.

# FLUID EXTS.

We exercise the greatest care in the selection of crude drugs, and every safeguard possible is thrown around their manufacture into fluid extracts. We have adopted the latest approved methods in the preparation of these goods, aiming for the highest degree of perfection by avoiding all abridged and objectionable methods. These drugs having been carefully selected and tested by physiological and chemical means, and assayed wherever possible to apply such test, we can give assurance that the fluids are true to label.

Any special sample desired, we will be pleased to furnish on application.

The prices given apply only to pint bottles.

For price in 5 pint bottles, deduct 10 cents per pint from list.

For price in 1-2 pint bottles, add 10 cents per pint to list.

For price in 1-4 pint bottles, add 20 cents per pint to list.

No charge for containers.

Please note the numerous additions to this list.
