

PHILADELPHIA, 1811 Spruce Street.

DEAR SIR :

In July last, I sent copies of a circular containing questions on Climatology to a number of leading physicians in the different sections of the country. Many replies have been sent to me, and I shall, on another occasion, have much pleasure in expressing my appreciation of their great value. At the last meeting of the American Medical Association a Committee was appointed to report on the health resorts and mineral springs of America. After consultation, it has been decided that the materials collected by myself shall serve as the basis of the report of this Committee. The following memorandum from the Chairman states this intention:—

*“The Committee of the American Medical Association, finding that Dr. William Pepper was engaged in the preparation of a work on American Climatology, and that the circular he proposed to distribute would cover much important information needed by the resolution under which they were appointed, have thought it best to combine their efforts with his, and thereby accomplish in a more thorough manner the end which they and Dr. Pepper seek to attain. In behalf of the Committee, I earnestly request that answers may be sent to Dr. Pepper, more or less in detail, in reference to the questions contained in his circular. If, throughout the country, each one will help us, even to a small extent, a great fund of valuable and reliable information may be secured.*”

HENRY I. BOWDITCH,

Chairman of the Committee of the American Medical Association.”

This second circular has accordingly been prepared, and is now distributed, with the earnest hope that it will receive the attention deserved by the importance of the subject. In reference to the mode of replying, I would state that the answers may be written on separate slips of paper, marked with the number of the question treated of. It is highly important that the replies should be received as promptly as convenient, in order that the information may be used in the preparation of the report to be submitted to the next meeting of the American Medical Association in May.

Very respectfully yours,

WILLIAM PEPPER.

1. What are the recognized and, in your judgment, deserving places of resort for invalids in your State?

2. What special forms of disease are most benefited by residence in those localities?

And, in particular, are there any places in your State said to be peculiarly beneficial to consumptive patients?

3. What are the peculiarities of these localities, so far as you may be acquainted with them, in regard to climate, and to the following special points:—

*a.* Altitudes?

*b.* Soil—sandy, clay, alluvial, etc.?

*c.* Wind? Is there any regular or prevalent wind? At what hours or seasons does it blow? Are sudden gusts, cold or warm, frequent? Is there much dust?

*d.* Temperature, annual mean; daily extremes at different seasons; variations between day and night, etc.?

*e.* Average readings of hygrometer and barometer?

*f.* Amount and distribution of rain-fall? Average number of rainy days? Does ground dry quickly after rain?

*g.* Water supply and drainage? Bodies of water near?

PHILADELPHIA, 1811 Spruce Street.

N. B.—It is intended to prepare a complete BIBLIOGRAPHY ON AMERICAN CLIMATOLOGY, and it is also important that all publications on the subject should be consulted. You are particularly requested to send a copy of any publication you have yourself made, and of any references to reports, articles, etc., with which you may be acquainted.

10801

A. General aspect of country—topography, mountains, hills, etc.

4. What are the prevalent diseases of the regions in different seasons, and what precautions would you recommend, as to dress, diet, exercise, etc., for the observance of visitors? (This question is intended to include not only the acute affections, but also the most prevalent disease as found on the mortality lists.)

5. What is the general character and the principal occupation of the inhabitants? What is the usual

can be obtained? What opportunities for sports?

6. What mineral springs or baths of established value exist in your State, what is their chemical nature, and in what diseases have you known their use to be of service?

7. Can you refer me to any reliable reports or analyses relating to the meteorology, sanitary statistics, health resorts, or mineral springs of your State?

(M.M.)
