

COURSE WORKBOOK

INITIAL ONLINE TRAINING CLASS

NATIONAL LIBRARY OF MEDICINE

AGENDA

Initial Online Services Training Class

National Library of Medicine

<u>MONDAY</u>	WELCOME	8:30 - 9:00
	HISTORY OF MEDLARS AND INTRODUCTION TO ALL NLM DATA BASES	9:00 - 9:30
	<u>BREAK</u>	9:30 - 9:45
	SYSTEM MECHANICS	
	A. LOGIN/LOGOFF procedures and use of terminal	9:45 - 10:30
	B. Basic commands/program messages	10:30 - 12:00
	<u>LUNCH</u>	12:00 - 1:00
	C. Terminal exercises	1:00 - 1:45
	D. Discussion of terminal exercises	1:45 - 2:00
	COMPUTER PHYSIOLOGY/BOOLEAN LOGIC	
	A. Computer Physiology	2:00 - 2:45
	B. Search efficiency/time overflow messages	2:45 - 3:15
	<u>BREAK</u>	3:15 - 3:30
	<u>TOUR</u> (MMS, Computer Room, Reading Room)	3:30 - 3:45
	C. Boolean logic slide/tape	3:45 - 4:30
	D. Boolean logic in-class exercise	4:30 - 4:45
	E. Discussion of class exercise	4:45 - 5:00
<u>TUESDAY</u>	MESH AND INDEXING PRINCIPLES	
	A. Use in indexing and searching	
	1. Introductory material/MeSH and related tools	8:30 - 10:10
	<u>BREAK</u>	10:10 - 10:25
	2. Annotations exercise & discussion	10:25 - 11:00
	3. Check tags	11:00 - 12:00
	<u>LUNCH</u>	12:00 - 1:00
	4. Subheadings & coordination	1:00 - 2:15
	5. MeSH Vocabulary file	2:15 - 2:45
	<u>BREAK</u>	2:45 - 3:00

- | | |
|---|-------------|
| 6. Sample search request and analysis of the question | 3:00 - 3:30 |
| 7. Terminal exercises | 3:30 - 4:30 |
| 8. Discussion of terminal exercises | 4:30 - 5:00 |

WEDNESDAY

SEARCH FORMULATION

- | | |
|---|---------------|
| A. MEDLINE/HEALTH | |
| 1. Lecture (including Scope and content, Unit record, Explosions, Pre-explosions) | 8:30 - 10:00 |
| 2. Sample search requests and analysis of the questions | 10:00 - 10:30 |
| <u>BREAK</u> | 10:30 - 10:45 |
| 3. Terminal exercises | 10:45 - 11:30 |
| 4. Discussion of terminal exercises | 11:30 - 12:00 |
| <u>LUNCH</u> | 12:00 - 1:00 |

SYSTEM CAPABILITIES

- | | |
|--------------------|-------------|
| A. Offsearch | |
| 1. Purpose and use | 1:00 - 1:45 |
| B. Storesearch | |
| 1. Purpose and use | 1:45 - 2:15 |
| C. SAVESEARCH | |
| 1. Purpose and use | 2:15 - 2:30 |
| D. SAVE | |
| 1. Purpose and use | 2:30 - 2:45 |
| <u>BREAK</u> | 2:45 - 3:00 |

FREE TEXT SEARCHING

- | | |
|-------------------------------------|-------------|
| A. Text word generation | 3:00 - 3:30 |
| B. Truncation/use of Nbr | 3:30 - 4:00 |
| C. Terminal exercises | 4:00 - 4:45 |
| D. Discussion of Terminal Exercises | 4:45 - 5:00 |

THURSDAY

STRINGSEARCH/SENTENCESEARCH

- | | |
|---------------------------------------|---------------|
| A. Purpose and impact on system | 8:30 - 9:00 |
| B. Format and use with all data bases | 9:00 - 9:30 |
| C. Terminal exercises | 9:30 - 10:00 |
| D. Discussion of terminal exercises | 10:00 - 10:15 |
| <u>BREAK</u> | 10:15 - 10:30 |

SEARCH FORMULATION

- | | |
|-------------------------------------|---------------|
| A. CHEMLINE (chemical searching) | 10:30 - 12:00 |
| <u>LUNCH</u> | 12:00 - 1:00 |
| B. TOXLINE | |
| 1. Lecture | 1:00 - 2:30 |
| <u>BREAK</u> | 2:30 - 2:45 |
| 2. Terminal exercises | 2:45 - 4:15 |
| 3. Discussion of terminal exercises | 4:15 - 5:00 |

FRIDAY

SEARCH FORMULATION

- | | |
|-------------------------------------|---------------|
| A. CANCERLIT, CANCERPROJ, CLINPROT | |
| 1. Lecture | 8:30 - 10:15 |
| <u>BREAK</u> | 10:15 - 10:30 |
| 2. Terminal exercises | 10:30 - 11:30 |
| 3. Discussion of terminal exercises | 11:30 - 12:00 |
| <u>LUNCH</u> | 12:00 - 1:00 |

ADMINISTRATIVE INFORMATION 1:00 - 2:00
(includes distribution of codes, explanation of Automatic SDI's and the functions of the MEDLARS Management Section, especially the MMS Service Desk)

INTEGRATION OF SUBJECT SEARCHING TECHNIQUES

- | | |
|--|-------------|
| A. Preparation of question | 2:00 - 2:15 |
| B. Terminal hands-on | 2:15 - 2:45 |
| C. Discussion of assigned question including proper data bases, use of OFFSEARCH, alternative strategies, etc. | 2:45 - 3:15 |

CLOSE

INITIAL ONLINE TRAINING

The goal of this course is to provide an overview of the MEDLARS system and the basic ELHILL searching capabilities. The course includes lectures, class participation, audiovisual presentations and supervised hands-on terminal experience.

Objectives are to:

1. introduce new users to the MEDLARS system, its content, its searching capability, and basic commands.
2. provide an understanding of NLM's controlled vocabulary, MeSH.
3. describe the uses and input procedure for the following system capabilities:
 - a. OFFSEARCH
 - b. STORESEARCH/SAVESEARCH/SAVE
 - c. STRINGSEARCH/SENTENCESEARCH
4. describe the MEDLARS rules for text word generation and provide experience with text word searching.
5. describe the scope, coverage, data elements and searching techniques for the following data bases:
 - a. MEDLINE
 - b. HEALTH PLANNING & ADMIN
 - c. CHEMLINE
 - d. TOXLINE
 - e. CANCERLIT, CANCERPROJ, CLINPROT
6. assist trainees in developing the skills necessary to perform efficient subject searches in appropriate data bases (integration of subject searching techniques).

MEDLARS TRAINING CLASS GLOSSARY

access	approach to information through any storage medium
acoustic coupler	a device that permits a telephone handset to be connected to a terminal. Through this device the terminal's signals are transformed into audible signals which the telephone transmits to a computer
address	a label or number identifying a database disk location where information is stored in the computer
alphanumeric	containing both letters and numerals
annotation	descriptive or explanatory comment
backfile	an older portion of a database that is separate from the current material
batch processing	processing procedure for which items must be coded and collected into a group before processing
Boolean operators	see logical operators
call number	combination of letters and numbers assigned (applied) to a book by means of which it can be arranged on the shelf and later located
category	a logical grouping of associated terms syn: tree
CAN #	computer assigned number that uniquely identifies a unit record
category qualifiers	mnemonics that stand for data elements in unit records
central concept	the main point of an article, indicated by an asterisk in MEDLINE
central processing unit	the area of the computer containing the circuits that control and execute the instructions given the computer from peripheral terminals
characters	symbols such as alphabet letters, the digits 0 through 9, punctuation marks or a space
check tags	concepts that need to be considered for every article and are preprinted on the indexing data form needing only to be 'checked'
citation	see reference
classification	systematic distribution or arrangement, in a class or classes

command	word or symbol entered by a user specifying the operation to be performed
concept	an idea of a class of objects, a general notion
connect time	elapsed time that a terminal has been connected to the computer (computer keeps track)
controlled vocabulary	a list of subject terms used to describe records in a database syn: subject authority list, thesaurus
coordinate indexing	a system of indexing using a combination of descriptors or descriptors and qualifiers to show relationships and to indicate more specific conceptual meaning
database	a collection of information, generally related by subject area, usually available via a computer search (MEDLINE database, TOXLINE database)
data elements	specific items of information that make up a unit record
dataphone	a special telephone set that enables transmission and reception of digital data without an acoustic coupler
default database	the database to which a user is automatically connected when logging into an online system
descriptor	a word or phrase used to identify a subject, concept or idea syn: heading, term
disk	a circular plate coated with magnetic material used to store digital or machine readable data (generally stored in disk packs)
disk time	time used by the computer to go to the disk pack, copy something and store the results syn: fetching and putting time, input/output time
down time	see system down
entry term	a synonym or near synonym for a descriptor syn: see reference
exclusion word dictionary	see stop word list
explode (explosion)	a mechanism by which the computer can do a generic search on a term and all the terms subordinate to it in the tree structure or hierarchy (by automatic ORs)
false drop	an item that is retrieved because it corresponds to terminology used in the search strategy but is not relevant

fetching and putting time	see disk time
field	an area of a unit record used to store a defined category of data
file	a collection of related records; usually used as a synonym for database; also sometimes used to refer to part of a database structure, e.g. the index file of a particular database
file maintenance	modification of a file/database, to incorporate changes such as additions, deletions, transfers or corrections
hardware	the machinery and computers used in data processing systems
header file	file that contains all of the complete unit records (identified by a CAN#) for a particular database syn: linear file, print file
heading	see descriptor
hierarchical relation	relation between classes in a chain of subordinated classes, where each foregoing member includes all following members of the chain
hits	see postings
index file	file that contains all the descriptors, numbers, authors, title abbreviations, text words, etc. that are directly searchable in a particular database. In this listing is shown the number of postings to each term, as well as (invisible to the user) the address in the postings file. syn: inverted file
input/output time	see disk time
interactive system	a system that allows direct communication between a user and the computer by means of a natural program language and allows for immediate alterations or modifications of search strategy syn: iterative system
inverted file	see index file
iterative system	see interactive system
ISBN	International Standards Book Number
ISSN	International Standards Serial Number

<i>journal</i>	<i>see serial</i>
linear file	<i>see header file</i>
logging in	getting connected to the computer
Logical operators	words or symbols used to represent the processes to be performed (AND, AND NOT, OR in the NLM system) <i>syn: Boolean operators</i>
magnetic tape	a tape with a magnetic surface used to store digital or machine readable data
major descriptor	any descriptor listed in the alphabetic MeSH that is not a 'see' or 'see under' reference
mapping	the automatic addition to the unit record, by the computer, of the appropriate descriptor to cover the concept indicated by an indexer
minor descriptor	any descriptor listed in the alphabetic MeSH as a 'see under' reference
mnemonic	a symbol or abbreviation to aid the memory; used in the MEDLINE context as a synonym for category qualifier
modem	acronym for MOdulator-DEModulator; a device connected to a terminal, that converts machine readable data to a form that is compatible with telecommunication equipment and vice versa
monograph	a treatise or book on a single subject
multimeaning	a message from the computer when an ambiguous term has been entered, i.e., the term occurs in the index in more than one way, e.g., MH, TA, SH. This message is also received when exploding a term that is in more than one tree
multiword term	two or more words searchable as a unit, without the need to be joined with logical operators
natural language	a language whose rules use natural speech rather than symbols
network	two or more points connected by communications links
noise	any disturbance, or unwanted signal, in the communication system that interferes with the normal operation of the system

offline printing	generation of printed records after the user has given the appropriate command and has logged off of the system
offline searching	computer processing of a search after the user has entered the appropriate strategy and has logged off of the system
online processing	processing of search statements and commands while the user is connected to the computer
periodical	see serial
postings	number of items 'posted' or indexed to the term or combination of terms searched syn: hits, tally
postings file	file that contains the addresses associated with specific terms in the index file. At these addresses are listed the CAN#s in the header file for the unit records that contain the specific term in the index file
precision ratio	the ratio of the number of documents retrieved and relevant to the question to the number of those not retrieved
print file	see header file
programs	see software
recall factor	the fraction of relevant documents retrieved by the system
record	see unit record
redundancy	the part of a message or record that can be eliminated without loss of essential information
reference	an indication of where to find certain information syn: citation
regeneration	rebuilding of file or databases see also update
root	the beginning or middle characters of a word or term syn: stem
scratch pad	see user environment
search	examination of a set of items (documents) for those that have a desired property (content)
search statement	an individual user-entered query that instructs the search program to retrieve a set of records matching the statement

search strategy	a set of planned search statements
see reference	see entry term
sequential access	access to stored information in a 'one after the other' manner
serial	a periodical publication containing articles by various writers syn: journal, periodical
software	the sets or computer readable messages that instruct computers to perform specified tasks syn: programs
stem	see root
stop word list	dictionary of syntactical words, articles and prepositions which are ignored when a machine scans titles or abstracts in the making of a KWIC index syn: exclusion word dictionary
subject authority list	see controlled vocabulary
system down	computer not functioning at that moment due to machine or programming failure
tally	see postings
Telenet	the GTE Telenet Corporation data telecommunications network that enables the user to connect with the NLM computer by dialing a Telenet telephone number local to the user area, eliminating the need of a long distance call
term	see descriptor
terminal	an electronic device for transmitting to and receiving signals from a computer
text word	a single word extracted from directly searchable data elements according to specified rules
thesaurus	see controlled vocabulary
time sharing	method of allowing simultaneous interaction with a computer by many users, each user being given a specified slice of time to perform operations syn: time slicing
time slicing	see time sharing
tree	see category

truncation process of dropping one or more characters from either end of a term or word without altering any of the remaining characters. For direct searching only right-hand truncation is allowed. For string searching both right- and left-hand truncation is allowed.

Tymnet (or Tymshare) The Tymshare Corporation data telecommunications network that enables the user to connect with the NLM computer by dialing a Tymnet telephone number local to the user area, eliminating the need of a long distance call

unit record a record containing all the facts or fields relating to a single citation, or a single descriptor or a single concept
syn: record

uniterm a single word; text words are uniterms

update modification of a file or database by addition, deletion or change of information
see also regeneration

user environment a work space on the disk pack reserved for an individual user at LOGIN
syn: scratch pad

WELCOME

I. OVERVIEW OF INITIAL COURSE

- A. Use of Initial Class workbooks
- B. Course objectives
- C. Agenda for week
 - 1. Lectures
 - 2. Lecturers
 - 3. Hands-on exercises
 - 4. Use of terminals
 - 5. Certificates at end of course
 - 6. Codes at end of course
 - 7. Evaluations at end of course (feedback to NLM from trainees)

II. ADMINISTRATIVE

- A. MLA Contact Hours (for recertification requirements)
 - 1. 35 Contact Hours for attending with hands-on
 - 2. 21 Contact Hours for auditing (no hands-on)
- B. Name tags
- C. Emergency notification cards
- D. Phone calls
- E. Lunch facilities
- F. No smoking or food in training room

III. INTRODUCTION OF TRAINEES

HISTORY OF MEDLARS AND INTRODUCTION TO ALL NLM DATA BASES

Objectives of this lecture are to:

1. Introduce trainees to the NLM MEDLARS system including:
 - a. the purpose of computerization at NLM and its historical development, starting with the use of computers to produce NLM publications (particularly INDEX MEDICUS) and leading into the development of an online interactive system to allow for demand searches.
 - b. the AIM-TWX Experiment and the development of MEDLINE.
 - c. current publications produced from MEDLARS.
2. Describe in general terms the scope and content of each of the NLM data bases.
3. Discuss the use of the computer, including hours of availability of the NLM computer and the sister computer at SUNY.
4. Describe the billing structure.
5. Make the trainees aware of the scope of the NLM online network nationwide/worldwide.

HISTORY OF MEDLARS

MANUAL

PART 1

MEDLARS

- Acronym for Medical Literature Analysis and Retrieval System.
- Represents entire computer system, including all the data bases.
- Began in 1964 for the purpose of preparing printed publications.

Elhill software

PRIMARY PUBLICATION -- INDEX MEDICUS

- Began in 1880 as Index Catalog of the Library of the Surgeon General's Office.
- Originally annual publication, produced on cards and assembled by hand, but by 1950's, with proliferation of medical literature, it became difficult to maintain.
- In 1954, began considering use of computers to produce IM.
- Today Index Medicus and all NLM bibliographic publications are produced via computer. *3 months elapsed time*

PREPARING CITATIONS FOR ENTRY INTO COMPUTER (Index Medicus/MEDLINE)

- Indexers in U. S. and foreign countries scan articles in over 2600 journals (Index Medicus).
- Assign subject headings to each article.
- Use MeSH thesaurus for headings:

Two parts to MeSH:

1. Annotated Alphabetic List -- different from "Black & White" public MeSH, i.e., contains terms that can be used in computer search but will not appear in IM.
2. Tree Structures -- categorized list of all MeSH terms.

14 Categories plus geographic category (available online only).

MeSH Categories

Category A -- Anatomy
 Category B -- Organisms
 Category C -- Diseases
 Category D -- Chemicals & Drugs
 Category E -- Procedures & Technics
 Category F -- Psychology & Psychiatry
 Category G -- Biological Sciences, Health Occupations,
 Environment, Biology & Physiology
 Category H -- Physical Sciences
 Category I -- Social Sciences
 Category J -- Technology, Industry, Agriculture & Food
 Category K -- Humanities
 Category L -- Information & Communication
 Category M -- Named Groups
 Category N -- Health Care

Category Z -- Geographics (terms for online use only) *not in IM*

- Most articles indexed with approximately 12 headings plus checktags (e.g., CHILD, HUMAN).
- Only 2-3 headings are asterisked to indicate main point.
- All headings may be searched in computer, citations appear in Index Medicus under asterisked terms only.
- All information for MEDLINE/Index Medicus is recorded on data forms and input into the computer. (Data forms will be discussed in MeSH lecture.)

THE UNIT RECORD

-- A unit record represents in the computer one complete bibliographic citation (in MEDLINE and other NLM bibliographic data bases). This includes:

- Title (TI)
- Author (AU)
- Source (SO) - a composite field in MEDLINE derived from the fields:

- TITLE ABBREVIATION (TA)
- ISSUE/PART/SUPPLEMENT (IP)
- VOLUME/ISSUE (VI)
- PAGINATION (PG)
- DATE OF PUBLICATION (DP)

- Main Heading (MH)
- Abstract (AB) - if present
- And all other fields containing information pertinent to the citation. Many fields are directly searchable via computer.

-- In a non-bibliographic data base, a unit record may represent, e.g., one chemical compound (as in CHEMLINE) and contains all the information pertaining to that compound in the data base.

INPUTTING INFORMATION INTO THE COMPUTER

-- Originally information was input into the computer on magnetic tape.

-- Allowed for production of publications and for computer searching in batch mode. Batch mode searching on the computer was particularly slow because it was sequential searching; i.e., each unit record (representing a citation in MEDLINE) had to be searched individually for the term of interest.

-- With the advent of new technology in hardware (the machinery of the computer), software (programs or instructions that run the computer) and communications systems (TELENET, TYMNET), it became possible to communicate with the computer directly in a real time/online fashion. Slow sequential/batch mode searching gave way to faster online interactive searching.

INPUTTING (continued)

- Disks, which look like stacks of phonograph records, replaced the magnetic tapes. Disks allow for direct access to the stored information unlike the tapes which allow for sequential searching only; much faster searching.

THE AIM/TWX EXPERIMENT -1970

- Abridged Index Medicus via TWX lines.
- First NLM online system began in June 1970.

MEDLINE

- Acronym for MEDLARS onLINE.
- Outcome of AIM/TWX Experiment; began in October 1971.
- Originally contained previous 3 years' citations plus current year and covered 1100 - 1200 journals.
- Now contains previous 2 years' citations plus current year and covers 3000 journals (Index Medicus covers approximately 2600 journals; MEDLINE coverage is broader due to the inclusion in the data base of Special List journals. (Manual 7.3.14))
- Older citations for MEDLINE contained in the BACKFILES (MED79, MED77, MED75, MED72, MED69, MED66). MED75, MED72, MED69, MED66 are available through OFFSEARCH only. (OFFSEARCH mechanism will be discussed in lecture later in week).

OTHER PUBLICATIONS PRODUCED VIA COMPUTER FROM NLM DATA BASES

- Computer use developed originally to produce publications; demand searches came much later.

- Current publications include:

Recurring Bibliographies (produced from MEDLINE and other NLM data bases with the cooperation of various sponsoring organizations):

ANESTHESIOLOGY BIBLIOGRAPHY
INDEX OF AUDIOVISUAL SERIALS IN THE HEALTH SCIENCES
CRANIO-FACIAL -- CLEFT PALATE BIBLIOGRAPHY
INDEX TO DENTAL LITERATURE
RECURRING BIBLIOGRAPHY ON EDUCATION IN THE
ALLIED HEALTH PROFESSIONS
FAMILY MEDICINE LITERATURE INDEX
HOSPITAL LITERATURE INDEX
RECURRING BIBLIOGRAPHY OF HYPERTENSION
INTERNATIONAL NURSING INDEX
BIBLIOGRAPHY ON MEDICAL EDUCATION
NEUROSURGICAL - BIBLIO - INDEX
ANNUAL BIBLIOGRAPHY OF ORTHOPAEDIC SURGERY
PHYSICAL FITNESS/SPORTS MEDICINE
CURRENT BIBLIOGRAPHY OF PLASTIC AND
RECONSTRUCTIVE SURGERY
BIBLIOGRAPHY OF PODIATRIC MEDICINE & SURGERY
PSYCHOPHARMACOLOGY BIBLIOGRAPHY
INDEX OF RHEUMATOLOGY
SCHISTO UPDATE
CURRENT CITATIONS ON STRABISMUS, AMBLYOPIA, AND
OTHER DISEASES OF OCULAR MOTILITY
BIBLIOGRAPHY OF SURGERY OF THE HAND
INDEX OF TISSUE CULTURE
QUARTERLY BIBLIOGRAPHY OF TROPICAL MEDICINE

-- Current publications (continued)

Literature Searches -- individualized bibliographies produced by MEDLARS deemed to be of wide interest are reprinted for distribution by NLM without charge. About 100 different bibliographies are available, including such topics as "Suicide or Depression in Childhood and Adolescence," "Hospices" and "Hypertension." A list of available titles appears in Index Medicus and Abridged Index Medicus; this list may also be obtained by writing to: Literature Search Program, Reference Section, National Library of Medicine, 8600 Rockville Pike, Bethesda, MD 20209. The name and address of the requestor, typed on a gummed label, must accompany the request (no return postage necessary). *10-12 a year*

BIBLIOGRAPHY OF THE HISTORY OF MEDICINE -- produced from the HISTLINE data base.

ABRIDGED INDEX MEDICUS (and CUMULATED ABRIDGED INDEX MEDICUS) -- from MEDLINE

LIST OF JOURNALS INDEXED IN INDEX MEDICUS

LIST OF SERIALS AND MONOGRAPHS INDEXED FOR ONLINE USERS

INDEX OF NLM SERIAL TITLES -- from SERLINE

NATIONAL LIBRARY OF MEDICINE AUDIOVISUALS CATALOG -- from AVLINE

NATIONAL LIBRARY OF MEDICINE CURRENT CATALOG -- from CATLINE

A complete list of all NLM publications is available by writing to MEDLARS Management Section.

NATIONAL LIBRARY OF MEDICINEONLINE FILE DESCRIPTIONS

Following are brief descriptions of data bases available through the National Library of Medicine's (NLM) computerized Medical Literature Analysis and Retrieval System (MEDLARS):

AVLINE (AudioVisuals onLINE) contains citations to about 10,000 audiovisual teaching packages used in health sciences education at the college level and for the continuing education of practitioners. All titles in AVLINE are screened for technical quality; all but lecture-type recordings are also reviewed for currency, content accuracy, and teaching effectiveness. AVLINE may be searched by words in abstracts, medical subject headings, titles, names, source, and elements of physical description such as medium and playing time.

BIOETHICSLINE (BIOETHICS onLINE) is a file of about 10,000 references to materials on bioethical topics such as euthanasia, human experimentation, and abortion. They are selected from the literature of the health sciences, philosophy, law, religion, psychology, and from the popular media. BIOETHICSLINE is produced in cooperation with the Kennedy Institute of Ethics, Center for Bioethics, at Georgetown University.

CANCERLIT (CANCER LITerature), formerly called CANCERLINE, is sponsored by NIH's National Cancer Institute (NCI) and contains about 225,000 references dealing with various aspects of cancer. All references have English abstracts. Over 3,500 U.S. and foreign journals, as well as selected monographs, meeting papers, reports, and dissertations are abstracted for inclusion in CANCERLIT.

CANCERPROJ (CANCER research PROJects), also sponsored by NCI, contains 20,000 descriptions of ongoing cancer research projects from the current and two preceding years. The descriptions are provided by cancer researchers in many countries and are collected for NCI by the Smithsonian Science Information Exchange.

CATLINE (CATalog onLINE) contains about 210,000 references to books and serials cataloged at NLM since 1965. CATLINE gives medical libraries in the network immediate access to authoritative cataloging information, thus reducing the need for these libraries to do their own original cataloging. Libraries also find this data base a useful source of information for ordering books and journals and for providing reference and interlibrary loan services.

CHEMLINE

CHEMLINE (CHEMical dictionary onLINE) is a file of some 1,000,000 names for chemical substances, representing 500,000 unique compounds. CHEMLINE, created by NLM in collaboration with Chemical Abstracts Service (CAS), contains such information as CAS Registry Numbers, molecular formulas, preferred chemical nomenclature, and generic and trivial names. The file may be searched by any of these elements and also by nomenclature fragments, making chemical structure searches possible.

CLINPROT

CLINPROT (CLINical cancer PROTOcols) is another NCI-sponsored data base. It contains summaries of clinical investigations of new anticancer agents and treatment techniques.

EPILEPSYLINE

EPILEPSYLINE (EPILEPSY onLINE) is sponsored by NIH's National Institute of Neurological and Communicative Disorders and Stroke. The file contains about 25,000 references and abstracts to articles on epilepsy that have been abstracted by Excerpta Medica.

HEALTH

HEALTH PLANNING & ADMIN (Health Planning and Administration) contains about 200,000 references to literature on health planning, organization, financing, management, manpower, and related subjects. The references are from journals indexed for MEDLINE, Hospital Literature Index, and other journals selected for their emphasis on health care matters. This data base will eventually also contain references to nonserial items such as books and technical reports. This file is produced in cooperation with the American Hospital Association and the Health Resources Administration.

HISTLINE

HISTLINE (HISTory of Medicine onLINE) contains some 40,000 references to articles, monographs, symposia, and other publications dealing with the history of medicine and related sciences. This data base is the source of NLM's annual Bibliography of the History of Medicine. Although there are selected references back to 1964, most of the material cited in the HISTLINE file was published after 1970.

MEDLEARN

MEDLEARN is a computer-assisted instruction (CAI) program which teaches the novice user how to search the NLM online system. Track A of MEDLEARN is currently available and is designed to teach the user to perform basic MEDLINE searches. The program provides online, interactive instruction including simulated subject searching and a final quiz which is programmed to evaluate the user's understanding of the material presented. Additional tracks are under development which will provide user education for other data bases and more advanced search techniques and system capabilities.

MEDLINE

MEDLINE (MEDLARS onLINE) contains approximately 600,000 references to biomedical journal articles published in the current and two preceding years. An English abstract, if published with the article, is frequently included. The articles are from 3,000 journals published in the U.S. and 70 foreign countries; MEDLINE also includes a limited number of chapters and articles from selected monographs. Coverage of previous periods (back to 1966) is provided by backfiles that total some 2,700,000 references. MEDLINE is updated monthly and is used to publish Index Medicus and other recurring bibliographies.

MeSH

MeSH Vocabulary File (Medical Subject Headings Vocabulary File) is an online vocabulary file of the 14,000 Medical Subject Headings that are used for indexing and retrieving references and for subject cataloging. Also included are approximately 20,000 chemical records. Specific chemicals with their associated Registry Numbers or Enzyme Commission Numbers and MeSH index terms will then be extracted from the vocabulary records and inserted into the MEDLINE unit records as they appear in indexed articles. The file consists of a complete description of each main heading and qualifier including such information as cross references, scope notes, and date of entry into the system.

NAF

NAF (Name Authority File) is an authority list of 110,000 personal names, series names, corporate names and series decision records used in the descriptive cataloging of NLM's monograph and serial collection. The NAF is primarily a support file for CATLINE, SERLINE, AVLINE and HISTLINE.

POPLINE

POPLINE (POPulation Information onLINE) contains about 80,000 citations and abstracts to journal articles, monographs, and technical reports in the field of population - including basic research in reproductive biology, applied research in contraceptive technology, family planning, and demography. POPLINE is produced in cooperation with the Population Information Program of Johns Hopkins University and the Center for Population and Family Health of Columbia University.

RTECS

RTECS (Registry of Toxic Effects of Chemical Substances), formerly the Toxic Substances List is an annual compilation prepared by the National Institute for Occupational Safety and Health (NIOSH). RTECS contains toxicity data for approximately 40,000 substances. Threshold limit values, recommended standards in air, and aquatic toxicity data are also included in this file.

SDILINE

SDILINE (Selective Dissemination of Information onLINE) contains references to the most current month of MEDLINE. The entire contents of the file are changed monthly and usually consist of approximately 20,000 citations. Users may store searches and have them run automatically by NLM each month against the new SDILINE file as a current awareness service.

SERLINE

SERLINE (SERIALS onLINE) contains bibliographic information for about 35,000 serial titles, including all journals which are on order or cataloged for the NLM collection. For one-fifth of these, SERLINE has locator information for the user to determine which U.S. medical libraries own a particular journal. SERLINE is used by librarians to obtain information needed to order journals and to refer interlibrary loan requests.

TDB

TDB (Toxicology Data Bank) contains chemical, pharmacological, and toxicological information and data on approximately 2,500 substances. Information on additional substances is being prepared. Data for the TDB are extracted from handbooks and textbooks and reviewed by a peer review group of subject specialists.

TOXLINE

TOXLINE (TOXICology information onLINE) is a collection of about 800,000 references from the last six years on published human and animal toxicity studies, effects of environmental chemicals and pollutants and adverse drug reactions. Older material (400,000 references) is in TOXBACK. Almost all references in TOXLINE have abstracts or indexing terms and most chemical compounds mentioned in TOXLINE are further identified with Chemical Abstracts Service Registry Numbers. The references are from five major published secondary sources and five special literature collections maintained by other organizations.

NATIONAL LIBRARY OF MEDICINE'S
 CHARGES TO U.S. CENTERS FOR ONLINE USAGE
 January 1, 1982

TOXLINE/TOXBACK74/TOXBACK65

<u>Online Hourly Rates</u>		<u>Page Charges</u>
Non-prime	\$45.00 (includes royalty charges of \$30.00)	
		\$0.35
Prime	\$52.00 (includes royalty charges of \$30.00)	(includes royalty charges of \$0.20)
Automatic SDI Profile Execution: \$1.00/month/search		

CHEMLINE

<u>Online Hourly Rates</u>		<u>Page Charges</u>
Non-prime	\$94.00 (includes royalty charges of \$79.00)	
		\$0.45
Prime	\$101.00 (includes royalty charges of \$79.00)	(includes royalty charges of \$0.30)

SYSTEM MECHANICS

Objectives

Trainees will be able to:

- 1. use the Phones and Terminal Identifiers lists to locate the proper phone number (or node) and terminal ID necessary to access the NLM or SUNY computers via direct dial, TYMNET and TELENET.
- 2. login and off the NLM and SUNY computers using direct dial (NLM only), TYMNET and TELENET access procedures, and explain program messages frequently encountered in the login process.
- 3. locate and explain the function of the following terminal settings:

CPS
 ONLINE
 DUPLEX
 PARITY
 AUTOMATIC LINE FEED

- 4. describe the purpose, entry format, and results of the use of the following ELHILL commands:

"TIME
 "CAPS
 PRINT
 PRINT FULL
 PRINT DETAILED
 PRINT AR
 TAILORED PRINTS
 PRINT INCLUDE
 PRINT EXCLUDE
 PRINT SKIP
 PRINT SS #
 PRINT OFFLINE
 PRINT INDENTED
 PRINT COMPRESSED
 NEIGHBOR
 NEIGHBORDET
 ERASEALL
 ERASEBACK
 RESTACK
 EXPLAIN
 FILES
 FILE
 USERS

4. (continued)

- NEWS
- COMMENT
- DISPLAY
- STOP Y
- PROFILE

5. explain the meaning of most commonly received ELHILL program messages and identify appropriate user responses for each.

INSTRUCTIONS FOR PHONE LIST

MANUAL

3.3

Look up your state on the attached PHONES list and locate your city or one nearest to yours. If your terminal operates at 10, 15 or 30 characters per second (cps) look for a blank, or a number, 10, 15 or 30, in the "SPEED" column. Usually, in the "TYPE" column either the letter 'B' or a blank will appear. Dial the TYMNET or TELENET telephone number in your city with the 'B' or a blank in the "TYPE" column. (If there are both TELENET and TYMNET telephone numbers (or nodes) for your city, you may elect to use either number.)

Follow the instructions for logging on that correspond to the telephone number you dialed (e.g., if you dial a TELENET number, use the TELENET logon instruction).

If your terminal operates at 120 characters per second (cps) you must look for the number "120" in the "SPEED" column. In addition, one of three modem or data set model numbers will appear in the "TYPE" column: 1) V3405, 2) B202, or 3) B212A. To use the TELENET or TYMNET 120 cps telephone number, you must have a modem that corresponds to one of the three types above, that is: 1) VADIC 3405 modem (for TYPE V3405), 2) BELL 202C or 202S DATA SETS (for TYPE B202), or 3) BELL 212A DATA SETS (for TYPE B212A).

If there is a 120 cps telephone number near your city, and your modem corresponds to the "TYPE" listed, dial the TYMNET or TELENET telephone number to access NLM and follow the instructions for logging on which correspond to the number you dialed (e.g., if you dial a TELENET number, use the TELENET logging on instructions).

If you have a 120 cps terminal, and do not live near a city with a 120 cps telephone number, or do not have the requisite modem, call the MEDLARS Management Section Service Desk (8:30 - 5:00 p.m. E.T.) 301/496-6193 or 800/638-8480 (toll free) for assistance.

PLEASE NOTE: The PHONES list is published every 3 months in the NLM Technical Bulletin. One copy of the Bulletin is sent every month to each USERID. Please check this list periodically for possible new phones access in your area.

INSTRUCTIONS FOR TERMINAL IDENTIFIERS LIST

(TYMNET and TELENET; no terminal identifier is necessary for Direct Dial)

MANUAL

I. TYMNET

3.5.2

If you will be using the TYMNET communications network (i.e., the telephone number you chose from the "PHONES LIST" is listed in the TYMNET column), you must know the appropriate terminal identifier for your particular type of terminal. This identifier will be either one letter (A, B, C, etc.) or a 'carriage return' depending on your terminal. Look at the attached list of TYMNET terminal identifiers. Find the "brand name" and model of your terminal on the list. Use the letter listed under the column marked "ID" as your terminal identifier. You will use the terminal identifier in the login process to NLM through TYMNET.

II. TELENET

3.5.3

If you will be using the TELENET communications network (i.e., the telephone number you chose from the "PHONES LIST" is listed in the TELENET column), you must know the appropriate terminal identifier for your particular type of terminal. For most terminals with thermal printers, pressing a 'carriage return' in response to the TELENET query "TERMINAL=" will be a sufficient terminal identifier. However, you should look at the attached list to see if a specific terminal identifier is listed for your terminal. If so, use the indicated terminal identifier instead of the 'carriage return' in the login process to NLM through TELENET.

III. DIRECT DIAL

3.5.1

Direct Dial login does not require a terminal identifier.

PHONES LIST

UNLESS OTHERWISE NOTED, THE SPEED OF THE NUMBERS IS 10-30 CHARACTERS PER SECOND (CPS).

* = DIRECT DIAL NUMBER

FOR 120 CPS USE COMPATIBLE MODEMS INCLUDE:

V3405 = VADIC 3400 SERIES COMPATIBLE. THE FOLLOWING VADIC EQUIPMENT IS COMPATIBLE: VA3455P AND VA3451P MODEMS AND VA3434 COUPLER. THE FOLLOWING ANDERSON JACOBSON EQUIPMENT IS COMPATIBLE: AJ1255 MODEM AND AJ 1234 COUPLER.

B/V = VADIC SUPER MODEM (V3467) NODE. USERS WITH BELL 103, 113, OR 212A MODEMS OR V3400 SERIES COMPATIBLE MODEMS MAY USE THESE NUMBERS. NOTE: BELL 103 AND 113 ARE LOW SPEED MODEMS.

B202 = INDICATES NODE IS BELL 202C OR 202S DATA SET COMPATIBLE.

B212A = BELL 212A DATA SET COMPATIBLE.

FOR IBM 2741 TERMINAL ACCESS:

B = INDICATES THAT BOTH CORRESPONDENCE AND EBCDIC CODED TERMINALS ARE SUPPORTED BY TYMNET. THE USER MUST TYPE A P FOLLOWED BY A CARRIAGE RETURN SO THAT TYMNET CAN DETERMINE THE "CODE" TO BE USED. USE CORRECT TERMINAL IDENTIFIER FOR TELENET ACCESS VIA 2741'S. THE NETWORKS DO NOT SUPPORT BCD CODED 2741'S.

ALL PHONE NUMBERS ARE SUBJECT TO CHANGE OR DELETION WITHOUT PRIOR NOTICE.

TELENET TERMINAL IDENTIFIERS

C-16

Telenet has published a new list of terminal model identifiers as of January 1981. They suggest that these identifiers be used to get the best performance from your terminal. If your terminal model is not listed, simply enter a CARRIAGE RETURN to the TERMINAL = prompt during the login procedure.

<u>Terminal Model</u>	<u>ID</u>	<u>Terminal Model</u>	<u>ID</u>

(CR) - CARRIAGE RETURN

ELHILL COMMANDS

GENERAL

MANUAL

- commands available in all data bases
- using a command does not use up a Search Statement number (except one command, FIND; that's why you may use a command after SF,C)
- a command may be given after any USER: cue
- as of July 3, 1978, initial double quotes are no longer required when inputting commands

EXCEPTIONS:

"TIME - not ELHILL command but TCAM (Telecommunications Access Method) command; initial quotes still required. (NLM command only.) 4.9.27

function: displays cumulative search or connect time from /login or from last "TIME command and computer connected to (NLM only); gives Eastern time.

example: USER:
"TIME
TIME 0:00:12 NLM TIME 7:16:30

NOTE: This command does not work at SUNY in this form. Instead at SUNY, to get time, type one @ (at sign) if connected through TYMNET communications network; type two @@ (at signs) if connected through TELENET.

"CAPS - not ELHILL command but TCAM command; 4.9.1
4.9.1 initial quotes still required

function: allows users with a terminal in upper and lower case to receive online output in upper case only

- does not affect OFFLINE/OFFSEARCH PRINTS
- online command only
- stays in effect for entire terminal session; cancelled by STOP Y logoff command only

NOTE: No CAPS capability is available at SUNY.

MANUAL

Double quotes are still required for commands at NLM and SUNY when the command is entered after certain system prompts. Two such prompts are:

MORE NEWS (Y/N) when printing NEWS

REPLY (Y/N) when sending a comment

NOTE: With elimination of initial quotes, if you want to search on a term that is also a command name or command name abbreviation, you must either enter the term preceded by a space or preceded by a qualifier.

e.g. to search on the term PRINT, enter:

USER USER:
 PRINT or (TW) PRINT

I. PRINT COMMANDS

Note: MEDLINE will be used as standard reference in discussion.

-- used to display full or partial unit records of postings received in any search statement.

Three standard PRINT commands:

4.9.16

PRINT (PRT) *av, ti, so*

PRINT FULL (PRT FU) *language + MH*

PRINT DETAILED (PRT DL) *everything*

a. display different unit record elements in different databases (e.g., MEDLINE, TOXLINE)

b. response to each standard PRINT command for each database in unit record description for each database in ONLINE SERVICES REFERENCE MANUAL (see specific database section) or available online

-- all PRINT commands display data elements of postings from Search Statement immediately preceding PRINT command

-- unit records most recently entered to database displayed first

MANUAL

- prints 25 lines at a time (if PROFILE has not been changed), finishes printing unit record it started printing even if 25 line limit reached
- any data element which is part of the standard print not present in the unit record will not have a "space" left in its place; the element will not be printed

IN MEDLINE

PRT - AU, TI, SO

PRT FU - AU, TI, LA, MH, SO,
CA (if present),
NM/RN (if present)

PRT DL - every printable element in the
unit record (all databases)

STANDARD PRINT MEDLINE/HEALTH/~~POPLINE~~ only

7.6/23.6

PRINT AR - AU, TI, SO, AB (if present) *40% here*

TAILORED PRINT COMMANDS

4.9.16.4

- indicate specific data elements to be displayed using mnemonic for data elements; commas necessary between mnemonics

e.g. PRT TI, MH (prints title and MeSH headings only -- good to browse titles for relevancy and to see how relevant citations indexed)

e.g. PRINT 5 TI (to limit browse to 5 titles only; comma not necessary between number and mnemonic)

OTHER PRINT COMMANDS

- 1) PRT INCLUDE -- gives basic elements for standard PRINT in database, plus elements specified 4.9.16.4

e.g. PRT INCLUDE MH (prints AU, TI, SO, MH;
same as PRT TI, AU, SO, MH)

Also: PRT FU INCLUDE
PRT AR INCLUDE

- 2) PRT EXCLUDE -- gives basic elements for standard PRINT in database, omitting elements specified 4.9.16.4

Also: PRT FU EXCLUDE
PRT DL EXCLUDE
PRT AR EXCLUDE

- 3) PRT SKIP -- used to print out only selected citations/postings from those retrieved; used with standard PRINTS, tailored PRINTS, etc. 4.9.16.5

e.g. PRT 1 SKIP 5 (prints one citation beginning at 6th citation)

- 4) SPECIFYING SEARCH STATEMENT NUMBER - used to print from Search Statement other than preceding one 4.9.16.6

e.g. SS 10/C?
USER:
PRT SS 5 TI (prints titles from Search Statement 5; overrides default to previous statement)

OTHER PRINT-COMMANDS (continued)

5) PRT OFFLINE -- used to avoid printing a large number of postings at your own terminal; instead, printing is done at night at NLM or SUNY (depending on which computer connected to when command issued) and mailed the next morning

4.9.16.8

-- limit on OFFLINE print = 300 postings; if postings greater than 300 and PRT OFFLINE command issued, a message will be received:

"LIMIT OF 300 DOCUMENTS FOR OFFLINE PRINT.
COMMAND DELETED."

-- to print more than 300 postings, issue more than one command using SKIP option

e.g. SS (5) PSTG (355)

```
SS 6/C?  
USER:  
PRT OFFLINE 300
```

```
SS 6/C?  
USER:  
PRT OFFLINE 55 SKIP 300
```

NOTE: In second or any subsequent PRT OFFLINE commands for the same search statement, exact number of remaining postings (in this case 55) must be specified or command will not work.

REMEMBER: There are page charges on OFFLINE prints; this should be considered when requesting a large number of postings to be printed at NLM or SUNY OFFLINE.

OTHER PRINT COMMANDS (continued)

-- OFFLINE prints may be used with standard prints or tailored

e.g. PRT OFFLINE TI SS 3
PRT OFFLINE AR SKIP 25
PRT FU EXCLUDE MH OFFLINE

COMPLETE FORMAT

SS (10) PSTG (112)

SS 11/C?

USER:

PRT OFFLINE

PROG: (PROGRAM PROMPTS FOR MAILING INFORMATION)

NAME?

ADDRESS?

CITY, STATE (PLEASE DO NOT ABBREVIATE) AND ZIP-

REQUESTOR'S NAME OR SAME

SEARCH TITLE, OR NONE?

OK? (Y/N/C/ADDRESS)

Y - program replies "OFFLINE PRINT COMPLETED"

N - program re-prompts for NAME, ADDRESS, etc.

C - program gives message:

"OFFLINE PRINT COMMAND HAS BEEN CANCELLED"

ADDRESS - program lists STORED ADDRESS if one exists

CANCELLING AN OFFLINE PRINT

entering C in response to Y/N/C/ADDRESS as above

entering a space and carriage return after any
USER: cue during the NAME, ADDRESS, etc. portion above

NOTE: After the message "OFFLINE PRINT COMPLETED" has been received, an OFFLINE PRINT may not be cancelled.

OTHER PRINT COMMANDS (continued)

PRESPECIFICATION OR ERROR CORRECTION IN OFFLINE PRINTS

4.9.16.8.1

- any user supplied information (i.e., address information) may be prespecified and/or corrected when inputting information for an OFFLINE print; the user may enter as much of the address information as will fit on one line (prespecification may not be continued on a second line).

e.g. PROG:
 NAME?
 USER:

JANE DOE, ADDRESS = 718 MAIN STREET

PROG:
CITY, STATE (PLEASE DO NOT ABBREVIATE), AND ZIP-
USER:

BETHESDA, MARYLAND 20014

PROG:
REQUESTOR'S NAME OR SAME MAIL = PROMPT
USER:

SAME, TITLE = HOSPICES

- specific keywords followed by a space, an equals sign (=) and another space must be used in place of program prompts during prespecification:

<u>program prompt</u>	<u>corresponding keyword</u>
NAME?	NAME =
ADDRESS?	ADDRESS =
CITY, STATE (PLEASE DO NOT ABBREVIATE, AND ZIP-	CITSTAZIP =
REQUESTOR'S NAME OR SAME	REQUESTOR =
SEARCH TITLE OR NONE	TITLE =

OTHER PRINT COMMANDS (continued)

- 6) PRT INDENTED -- mnemonics which are used with all prints are spelled out in full 4.9.16.7

e.g. PRT INDENTED
PROG:

{	AUTHOR	WALD FS
	TITLE	TERMINAL CARE AND NURSING EDUCATION
	SOURCE	AM J NURS 1979 OCT; 79(10):1762-4

-- may tailor:

PRT AR INDENTED
PRT TI, AU, SO, MH INDENTED
PRT OFFLINE INDENTED

-- good PRINT command for demonstrations and with new databases (for unfamiliar mnemonics)

- 7) PRT COMPRESSED (alias: PRT COMPR; PRT COMPRESS) 4.9.16.7

-- data elements having more than one item of information (e.g. AUTHOR (multiple authors)), will print out across the page rather than listing down, one item per line

-- online PRINT command only (OFFLINE & OFFSEARCH PRINTS already in compressed format)

e.g. PRT COMPR
PROG:

1
AU - HOUFF SA ; BURTON RC ; WILSON RW ; HENSON TE ;
LONDON WT ; BAER GM ; ANDERSON LJ ; WINKLER WG ;
MADDEN DL ; SEVER JL
TI - HUMAN-TO-HUMAN TRANSMISSION OF RABIES VIRUS BY
CORNEAL TRANSPLANT.
SO - N ENGL J MED 1979 15 MAR;300(11):603-4

II. OTHER COMMANDS

1) NEIGHBOR (alias NBR)

4.9.13

- used to browse Index File of the database connected to (Index File contains all searchable elements in the database listed A-Z; 1-9999)
- displays search terms alphabetically or numerically identical to or adjacent to term entered entered and the number of postings for that term in the database connected to
- can enter up to 36 characters

EXAMPLE:

```
SS 1/C?  
USER:  
NBR EYE

POSTINGS

TERM

1	EYDOUX P (AU)
2	EYDT JN (AU)
829	EYE (MH)
2428	EYE (TW)
10	EYE BANKS (MH)

UP N OR DOWN N?

USER:

1) NEIGHBOR (continued)

- displays term and 2 terms above it in Index File and 2 terms below
- if the term is not there, it takes you to the area of the index where it would be

QUESTION "UP N OR DOWN N?"

To browse further, answer question with any of the following:

To continue down (toward Z) enter:

DOWN (with a number 1-10)
D (with a number 1-10)
a number 1-10

DOWN by itself defaults to 5
D may not be entered by itself

To continue up (toward A) enter:

UP (with a number 1-10)

UP entered by itself defaults to 5
a number 1-10 will not page up; UP must be used to page up or the system will assume DOWN.

U may not be entered by itself or with a number to page up.

To cancel a NEIGHBOR command, in response to the question, enter:

N	a space followed by a carriage
NONE	return
NO	another command
0	anything except a number

Find ()

1) NEIGHBOR (continued)

To NEIGHBOR specific part of the Index, use mnemonic.

EXAMPLE: SS 1/C?
 USER:
 NBR EYE (MH)
 PROG:

POSTINGS	TERM
498	EXTREMITIES
198	EXUDATES AND TRANSVDATES
977	EYE
9	EYE BANKS
79	EYE BURNS

-- mnemonic not shown after term since only MH requested

-- may get TIME OVERFLOWS limiting NEIGHBOR by mnemonic

2) NEIGHBORDET (alias NBRDET) *detailed* 4.9.13

-- more detailed NEIGHBOR used for NBRing MeSH Headings

-- lists every form of the heading, alone, with the asterisk, with subheadings, and with both asterisk and subheadings

-- terms may not be NBRed with asterisk; must page down

-- qualifier required

astereis = main point

nbrdet eye (inh)
PROG:

POSTINGS	TERM

UP N OR DOWN N?

USER:

3) ERASEALL (alias ERSLL)

- erases all previous search statements
- returns user to SS 1/C?
- after ERASEALL, previous search statements may not be used in searching or printing
- use anytime; most common after SF,C *25 SS limit*

4) ERASEBACK (alias ERASEBAK; ERSBK; BACKUP)

4.9.6

- to delete search statements selectively
- command entered alone, deletes last search statement having postings

e.g. PROG:
 SS (20) PSTG (277)

 SS 21/C?
 USER:
 ERASEBACK

 PROG:
 SS 20/C?

- command entered with a number, deletes all search statements with numbers greater than or equal to the one entered with the command

e.g. PROG:
 SS 23/C?
 USER:
 ERASEBACK 9

 PROG:
 SS 9/C?
 USER:

- use to give more room on scratch pad, when overflow messages received

5) RESTACK (continued)

EXAMPLES:

Assume search statement 7 just completed

COMMAND ENTERED	RESULT	PROGRAM RESPONSE
RESTACK	SS 1,2,3,4,5,6 erased; SS 7 becomes SS 1	SS 2/C? USER:
RESTACK 4,7	SS 1,2,3,5,6 erased SS 4 becomes SS 1 SS 7 becomes SS 2	SS 3/C? USER:
RESTACK TO 4	SS 1,2,3 kept SS 5,6 erased SS 7 becomes SS 4	SS 5/C? USER:
RESTACK 5,7 TO 2	SS 1 retained SS 2,3,4,6 erased SS 5 becomes SS 2; SS 7 becomes SS 3	SS 4/C? USER:
RESTACK 5 TO 7	ERROR A lower SS number may not be renumbered to a higher SS number	SS 8/C? USER:

-- NOTE: smallest search statement number always put to lowest search statement number

e.g

RESTACK 7,4

SS 7 will become SS 2;
SS 4 will become SS 1 regard-
less of order entered

-- commas necessary when RESTACKing multiple numbers

6) EXPLAIN (alias EX)

- command entered alone explains last program message received
- entering EXPLAIN EXPLAIN gives list of explainable items
- command entered with explainable term, i.e., program message, command, database name, etc. gives explanation of requested term

USEFUL EXPLAINS

EXPLAIN UNIT RECORD -- gives detailed explanation of the unit record of the database connected to.

To obtain unit record explanation of data base not connect to, use EXPLAIN with database name.

e.g. in MEDLINE to obtain explanation of CHEMLINE unit record, enter:

EXPLAIN CHEMLINE

7) FILES (alias FILE ?)

4.9.9

- names all ELHILL databases available to your USERID and available at the computer connected to (NLM & SUNY have different databases available)

-- tells which data base connected to

8) FILE

4.9.8

- command used to change from one database to another
- erases scratch pad, i.e., all search statements from database previously connected to
- at SS 1/C? in new database

9) USERS

- enter to obtain the number of ELHILL users currently connected to system
- if connected to NLM, multiply number of users by 3 to obtain actual number of users (three copies of ELHILL at NLM)
- if connected to SUNY response to command is actual number of users
- 30-40 users, response time slows; SUNY usually has fewer users

10) NEWS - *use at least once a week*

4.9.14

- to receive general system news while connected to system
- contains news of such things as updates to databases, system news, closing news (around holidays), and other items of immediate interest to users
- gives news one item at a time, most recent item first and asks user if wishes to continue
- next to last item in news contains list of most used databases with date of most recent update, dates of coverage and number of unit records
- added to almost daily
- kept about one week (unless of ongoing interest)
- should get news every day
- gives news faster than Technical Bulletin

12) DISPLAY (continued)

-- Entered with a NUMBER: DISPLAY 5 (gives logical structure of search statement 5 only)

-- Entered with a STORESEARCH or SAVESEARCH name

DISPLAY DR JONES HOSPICES
(gives logical structure of a STORESEARCH or SAVESEARCH stored under USERID)

13) STOP or STOP Y

4.9.24

-- to disconnect from system

-- gives total connect time

entered without Y:

STOP

TIME 0:18:32 NLM TIME 13:26:57

PROG:
DONE? (YES/NO)

USER:
YES

PROG:
GOODBYE!

entered with Y (or YES), preanswers DONE question:

USER:
STOP Y

PROG:

TIME 0:13:22 NLM TIME 10:32:12

. . .

GOODBYE!

14) PROFILE (series of commands)

-- These commands are used to display or change data in the Unified User Specification File (UUSF) attached to a user ID code. There are two ways to manipulate data in the UUSF: 1) use the PROFILE MODIFY command and deal with each item individually as the system prompts you, or 2) use the PROFILE MODIFY command with one or more of the following keywords (separated by commas): PASSWORD, STORAD, NAME, ADDRESS, CITSTAZIP, PAGELENGTH, PAGEWIDTH.

In the first option, the user enters the command -

```
USER:
PROFILE MODIFY
PROG:
PASSWORD?                (The system prompts for data)
```

```
USER:
SAME                      (The user elects to keep the same
PROG:                    passowrd)
NAME?
```

```
USER:
JANE DOE                 (The user chooses to enter a value)
PROG:
ADDRESS?
```

```
USER:
SAME
PROG:
CITSTAZIP?
```

```
USER:
SAME
```

. . . . The system will continue to prompt for each item and will list the latest value for every one after the last interaction:

```
PROG:
PASSWORD = DAFFODIL
NAME = JANE DOE
ADDRESS = 15 MAIN ST.
CITSTAZIP = NEW YORK, NY 10021
PAGELENGTH = 40
PAGEWIDTH = 80
OK? (Y/N/C/LIST)        (The NO reply will begin the MODIFY
                        process again from the beginning,
                        the CANCEL reply will put the user
                        at the next search statement, and
                        the LIST reply will list the entire
                        UUSF data again)
```

An item of data may be removed with the REMOVE response to the prompt, e.g.,

```
PASSWORD?  
USER:  
REMOVE
```

but an error message will be received if you attempt to remove a necessary item.

In the second option, the user enters one or more keywords:

```
USER:  
PROFILE MODIFY PASSWORD, NAME  
PROG:  
PASSWORD?
```

```
USER:  
DAFFIDIL           (The user has accidentally  
PROG:              misspelled the word DAFFODIL)  
NAME?
```

```
USER:  
MARY JONES  
PROG:  
(the system lists the entire contents of the UUSF,  
including the new values)  
OK? (Y/N/C/LIST)
```

```
USER:  
PASSWORD = DAFFODIL (The keyword is used to correct  
OK? (Y/N/C/LIST)   the misspelling)
```

```
USER:  
YES  
PROG:  
PROFILE COMPLETED.
```

Limitations on the UUSF data include:

- 1) Password must be no more than 8 alphabetic characters or fewer than 3 characters.
- 2) Stored address may be only 3 lines of up to 50 characters each.
- 3) Page length may vary from 10 to 100 lines between CONTINUE PRINTING? (Y/N) message; page width may vary between 40 and 132 characters.

III. PROGRAM MESSAGES

1) NO POSTINGS MESSAGE

4.10.3

-- indicates that no unit records have been found by the computer having the term entered in the field entered

-- common reasons why message received:

- a. misspelling a term (most frequent reason)
- b. entering a term with the wrong qualifier or without a qualifier when one needed, e.g. entering a Text Word in MEDLINE (which defaults to searching MeSH headings) without the qualifier (TW)
- c. when subheadings have been applied to search statements using the SUBHEADINGS APPLY command (MEDLINE only) and no MeSH headings with the specified subheadings are found
- d. term does not exist in data base as a search term

e.g. SS 1/C?
 USER
 LIBER DISEASES (LIVER misspelled)
 PROG:
 NP (LIBER DISEASES)

NP in a search statement containing Boolean AND.

-- if a term which retrieves postings is ANDed in a single search statement with a term for which there are no postings, a NO POSTINGS message will result and no retrieval will be saved

e.g. SS 1/C?
 USER:
 LIVER DISEASES AND HUMEN

 PROG:
 NP (HUMEN)
 *NONE

-- nothing is saved; entire search statement must be correctly reentered

1) NO POSTINGS MESSAGE (continued)

NP in a search statement containing Boolean OR. 4.10.3

-- if a term which retrieves citation is ORed in a single search statement with a term for which there are no postings, a NO POSTINGS message will be generated only for the term with no retrieval

e.g. SS 1/C?
 USER:
 LIVER OR LIBER NEOPLASMS

 PROG:
 NP (LIBER NEOPLASMS)

 SS (1) PSTG (5875)

 SS 2/C?
 USER:

-- retrieval for LIVER saved

-- LIVER NEOPLASMS must be reentered and ORed with SS 1 retrieval to obtain same results

NOTE: Always be leary of NP Message
 Make sure of spelling
 Make sure connected to right file (MeSH headings work only in MEDLINE and HEALTH)
 Make sure using correct subheading
 Make sure embedded AND disguised in MeSH heading

2) NONE, NO MATCH, *NONE

4.10.4

-- appears when there are no records having EACH term connected by the Boolean AND

e.g. SS 1/C?
 USER:
 LIVER AND DOUGLAS R
 PROG:
 *NONE-
 SS 1/C?

Basic Commands/Program Messages

Initial Training Class

NOTE: PLEASE USE SUNY COMPUTER

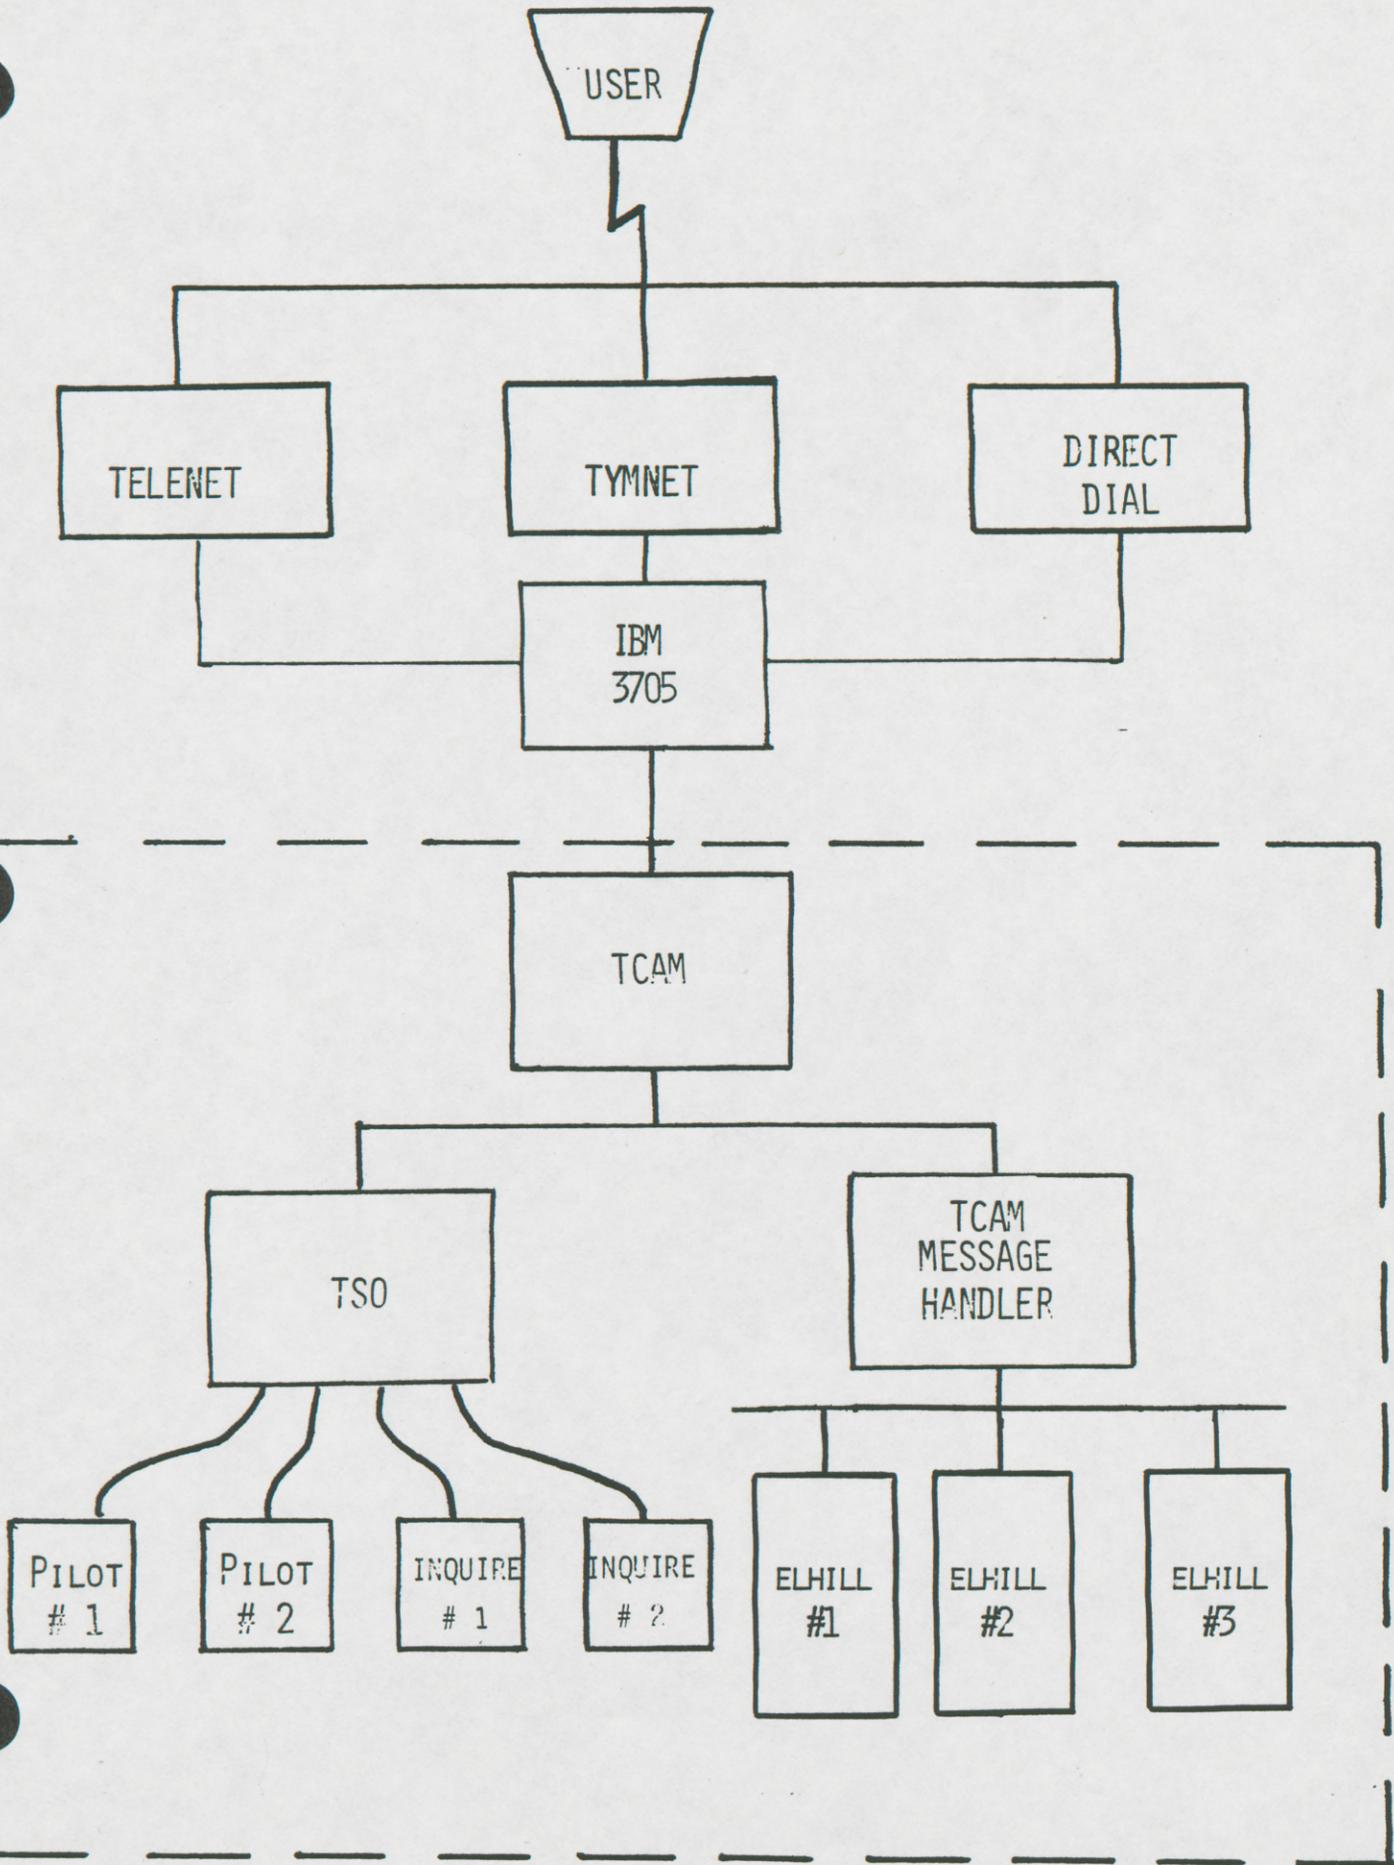

1. Which authors are filed alphabetically around your name?
2. Using the NBR or FIND command, find the number of postings for the term BRAIN CHEMISTRY.
3. Cause a *NONE message to appear by using two terms with the AND logical operator.
4. Cause a NP--NO POSTINGS message to appear.
5. Type OBESITY AND HEART DISEASES. Now combine those terms using 2 search statements, then 3.
6. From the postings received in #5 (above):
 - a. Print 2 citations (author, title, source)
 - b. Print 3 titles
 - c. Print the 2nd citation in full
 - d. Print the source and journal title code of 1 citation
 - e. Print indented the 2nd and 3rd citations
 - f. Print 1 detailed
 - g. Print offline, using the following information:
Your name (ONLINE TRAINING CLASS)
MMS
NLM
****Be sure to cancel the offline printout****
 - h. Print 3 titles from search statement 2
7. DISPLAY your search.
8. Using RESTACK, save your first and last search statements.
9. Use ERASEALL.
10. List the first two items in the NEWS.
11. Send a COMMENT to MEDLARS Management Section.
12. Which files are available to your code?
13. Type EXPLAIN CHEMLINE to print out an explanation of the database.
14. Neighbor WATER without a qualifier, with a qualifier.
15. Log off the system.

Computer Physiology

Objectives

Trainees will be able to:

1. identify the parts of a communications network and the NLM computer configuration, and the corresponding steps in transmission of messages to and from the user.
2. recall the typical ELHILL data base structure and processing rules, and identify search techniques which make efficient use of the system based on this knowledge.
3. understand the various overflow messages of the ELHILL system and the proper action to take in response to each.

AFTER A CARRIAGE RETURN...

1. TYMNET/TELENET COMPUTER NETWORK.
2. MESSAGE CONTROL PROGRAM (MCP) & Q.
3. MEDLINE (ELHILL) PROCESSING.
4. BACK TO MCP & OUTPUT QUEUE.
5. TYMNET/TELENET COMPUTER NETWORK.
6. RESPONSE PRINTED AT TERMINAL.

TERMINOLOGY
(SIMPLIFIED)

DATA BASES -- MAKE UP THE MEDLARS SYSTEM; STORED ON
DISK PACKS.

FILES -- PARTS OF EACH DATA BASE.

UNIT RECORD -- REPRESENTS ONE COMPLETE CITATION IN THE
COMPUTER (IN A BIBLIOGRAPHIC DATA BASE)
OR ONE COMPLETE RECORD (IN A DATA BANK).

CPU TIME -- COMPUTER THINK TIME.

DISK (I/O) TIME -- FETCHING/PUTTING.

USER ENVIRONMENT -- SCRATCH PAD.

INTERMEDIATE RESULTS -- "SET ASIDE".

HEADER FILE

- contains all of the unit records for a data base.
- arranged one after another; no particular order.
- unit records most recently put into the data base are on top.
- all have CAN Number (CAN = Computer Assigned Number).
- printing done from Header file.
- stringsearching/sentence searching done on header file.

INDEX FILE

- contains all the terms, numbers, title abbreviations, etc. that are directly searchable in the data base connected to.
- alpha-numeric index A-Z followed by numbers.
- has the number of postings to any particular term listed with term.
- transparent to user, has computer address of the place in the POSTINGS FILE where CAN numbers of particular term are listed.

POSTINGS FILE

- contains addresses associated with specific term from Index file.
- lists CAN numbers from Header file for unit record which contains the specific term in Index file.

COMPUTER PHYSIOLOGY
REVIEW

THREE FILES....

INDEX FILE - (TALLIES, ADDRESSES).

POSTINGS FILE - (ADDRESSES).

"HEADER" OR DATA FILE - (CITATIONS).

PROCESSING RULES

A AND C OR B AND C

- 1) MOVE A TO SCRATCH PAD
- 2) MOVE C TO SCRATCH PAD
- 3) COMPARE LISTS A AND C
- 4) SAVE (SET ASIDE) INTERMEDIATE RESULTS
- 5) MOVE B TO SCRATCH PAD
- 6) MOVE C TO SCRATCH PAD
- 7) COMPARE LISTS B AND C
- 8) FETCH INTERMEDIATE RESULTS (FROM 4)
- 9) COMPARE 2 INTERMEDIATE RESULTS LISTS
- 10) STORE FINAL RESULTS

OPTIMIZATION

(A OR B) AND C.....

SS2 EXPLODE F2.54 AND SELF CONCEPT
SS3 EXPLODE F2.54 AND SICK ROLE
SS4. 1 OR 2 OR 3

OVERFLOW MESSAGES

Two kinds of limits to system:

- 1) to size of scratch pad/user environment.
- 2) to time computer allocates each user for any interaction or process.

1. LIMIT TO SIZE OF SCRATCH PAD

(NOTE: Scratch pad/user environment not really measurable; contains certain limits; whichever hit first is one that inhibits further searching unless user takes some type of action.)

A. Only 25 search statements may be entered 4.10.15

- receive message SF, ^{erase}C, ^{command}
- can only enter commands (not FIND).
- use ERASEALL, ERASEBACK, RESTACK to make more room.

B. STORPSTG OVFL 4.10.18

- received when user has reached the limit on the number of cumulative postings (or CAN numbers) which may be stored on scratch pad (approximately 100,000 postings).
- use ERASEALL, ERASEBACK, RESTACK to make more room.

C. PROCPSTG OVFL 4.10.19

- received when the total number of postings generated in the "Intermediate Results" of one search statement exceeds 160,000.
- to remedy, refine search statement and reenter.

MANUAL

D. ^{word} KEBTRM OVFL 4.10.20

--received when more search terms have been entered in a series (from SS1 onward) than allowable by ELHILL (380 terms or 5800 characters, whichever comes first).

--does not include EXPLODES or truncations.

--to remedy use ERASEALL, ERASEBACK, RESTACK.

E. GENTRM OVFL (PX) 4.10.21

--received when the number of terms, in one search statement, generated by an EXPLODE or truncation, exceeds 450.

--to remedy, use more specific EXPLODE or less general truncation.

2. LIMIT TO PROCESSING TIME

A. TIME OVFL: CONT? (Y/N) 4.10.17

--received when the procedure requested (e.g., an EXPLODE) required more computer time (CPU) than in one time slice.

--answers:

Y - computer continues processing
(assumes Y if anything typed in place of Y)

N - stops processing; saves nothing;
gives NP (No Postings) message

B. Time OVFL in TS/SENS 4.10.5
(STRINGSEARCH/SENSEARCH)

--received in TS/SENS after certain number of Header File records have been searched for character string (approx. 50).

--answers:

Y - continues searching next 50 records

N - writes CAN Numbers of those records that already matched string on scratch pad; gives number of pstg.

C. DYNAJECT

4.10.22

--received when too many users have time
overflows at same time.

--processing of all requests stops.

--remedy:

reenter search statement immediately

ONLINE BOOLEAN LOGIC SEARCHING - INITIAL TRAINING CLASS
MONDAY P.M.

Formulate search statements for each of the requests below using the logical connectors: AND, OR, AND NOT

VOCABULARY for numbers 1-6

CANNABIS
DRUG ABUSE
FOREIGN
ENG

MEMORY
MESCALINE
PERSONALITY

STUDENTS
THINKING

1. The effects of cannabis on memory.
2. The effects of cannabis on memory or thinking.
3. The effects of cannabis or mescaline on memory or on thinking.
4. Any effects of cannabis on personality but exclude studies involving students.
5. English language articles on drug abuse among students.
6. All articles on mescaline but since I've read all the English language journals, just retrieve the foreign literature.

MeSH

Trainees will be able to:

1. describe and define the structure of MeSH including the following:
 - alphabetic arrangement
 - Latin, Greek and English roots
 - inversions
 - hierarchical arrangement
 - subject groups (Tree Structures)
 - specificity
 - references
 - see
 - see under
 - see related
2. select appropriate subheading(s) to cover a particular aspect of a MeSH heading, applying (as appropriate) category permissions and restrictions, common groupings, and hierarchical groupings
3. use and combine terms in the vocabulary to retrieve relevant citations from the data base(s) indexed with those terms
4. retrieve relevant citations from the data base(s) given subject requests.

I. Background

A. Index Medicus (IM) compared with MEDLINE 7.1

- | | |
|---|---|
| 1. Hardcopy | Online |
| 2. Only IM journals | IM journals plus Special List journals |
| 3. Citations listed under Major Descriptors only | Citations retrievable using Major or Minor Descriptors |
| 4. Citations listed under central point of article only | Citations retrievable by central or peripheral concepts |

B. Journals

1. Index Medicus - approximately 2500 titles
2. Special Lists - approximately 500 titles
 - a. Dental (D)
 - b. Nursing (N)
 - c. Communication Disorders (C)
 - d. Foreign (F)
3. List of Journals Indexed (LJI)
 - a. Separate publication, January IM, Cumulated IM
 - b. 4 listings--Title Abbreviation (TA), Full Title, Subject, Geographic
4. List of Serials and Monographs Indexed for Online Users
 - a. IM journals, Special List journals, Monographs
 - b. 1 listing--Title Abbreviation (TA)
5. Priority
 - a. 1 or 2--Use enough descriptors to cover content of article fully
 - b. 3 --Use only enough descriptors to cover major points of article
6. Selective
 - a. Journals that are not exclusively medical, biomedical; we index only the medical, biomedical articles (F)

C. Index Medicus (IM) vs Non Index Medicus (NIM) Concepts (CHART I)

- | | |
|---|--|
| 1. Central, primary points of the article | Peripheral, secondary point of the article |
| 2. Organs, diseases, therapies, substances, physiological processes | Technics, age groups |
| 3. Veterinary animals | Experimental animals |
| 4. Main Subject | Delimiters of the subject |

*Search *

main
point*

II. Introduction to MeSH

A. Introductory Material

1. Scope and Content
 - a. Authority list for subject analysis of biomedical literature at NLM
 1. Used for Index Medicus
 2. Used for computer searching
 3. Used for cataloging of books and audiovisuals at NLM
 4. Revised annually
 - b. Primary aspects--organs, organisms, diseases, treatments, drugs and chemicals
Secondary aspects--physiological functions, chemistry, biochemistry, paramedical areas
2. Comparison of Black & White MeSH (IM MeSH) with Annotated MeSH *(preferred)*

	6.2
<ol style="list-style-type: none"> a. Number of headings b. Geographis c. Checktags - <i>subject</i> d. NonMeSH terms - e. Annotations - 	6.3
3. Forms of Headings

	6.4
<ol style="list-style-type: none"> a. Normal, Inverted b. Greek, Latin roots c. Precoordinated d. Speciality Headings e. NonMeSH terms 	
4. Alternate Entries for MeSH Headings

	6.9
<ol style="list-style-type: none"> a. Data Form Abbreviations b. Omitted AND Abbreviations c. Embedded Subheading Abbreviations d. Hyphenated Descriptors e. Descriptors with words ending in 'ic' or 'ical' f. Descriptors with the word DISEASE, DISEASES, DISORDER or DISORDERS 	
5. Terminology Changes

(Front of Annotated MeSH)

- | | |
|--|-------------|
| a. New Headings with Previous Indexing | X-XVIII |
| b. New Headings with Scope Notes | XIX-XXX |
| c. New Headings by Subcategory | XXXI-XXXIII |
| d. Replacement Headings | XXXIV-XXXVI |
| e. Deleted Headings | XXXVII-XLI |
| f. Majors changed to minors and minors changed to majors | XLII |

*major descriptors
minors "
+ refer to
tree*

B. Descriptor types

- | | | |
|----------------------|---|-------|
| 1. Major descriptors | <i>- stands on its own, large type</i> | 6.3.1 |
| 2. Minor descriptors | <i>always see under, can be searched on line</i> | 6.3.2 |
| 3. Entry terms | <i>to descriptors, synonyms. either side of x ref</i> | |

C. Cross References

6.3.3

- | | | |

Introduction | 6.2.3 |
| | A. To find a specific heading | | |
| | B. To identify (locate) related headings | | |
| | C. To identify possible "noise" in Text Word searching | | |

VI. Check Tags

usually added

A. Check-list vs Subject Indexing

6.3.1.2

B. Data Form

Workbook

1. Preprinted Concepts

2. Indexer typed Concepts

C. Representative Groups

Workbook

1. Citation Types (Never IM)

a. Historical Article

1. Historical note or historical aspects of a subject

b. Historical Biography

1. Substantive material relating to persons who died before the calendar year preceding the date of publication of the journal in hand

c. Biog Obit

1. Substantive material relating to living persons or those who died within the current or previous year in relation to the publication date of the journal in hand

d. Monograph

1. Indicates individual papers within selected nonjournal items, i.e., symposia, congresses

e. English Abstract

1. Indicates presence in journal of substantive English language abstract with foreign language article

2. Chronologic Tags

- a. Used in conjunction with 1a,b, or c
- b. May be IM or NIM

3. Author Abstract (AUTHOR (AA))

- a. Indicates presence on computer unit record of substantive English language abstract text taken from journal
- b. Used with English or Foreign articles

*1975 or later
PRE AR*

4. PREGNANCY

- a. Normal is IM
- b. Useful redundancy--this check tag is used (NIM) even when an indexing descriptor has an obvious relation to pregnancy, i.e., ABORTION, LABOR, PREGNANCY COMPL.

MANUAL

5. Age Groups
 - a. Usually NIM
 - b. Sometimes IM
 1. When age group is discussed from social, sociological, political, psychological aspect
 - c. INFANT, NEWBORN
 1. Normal is IM
 2. Useful redundancy--this check tag is used (NIM) even when an indexing descriptor has an obvious relation to the newborn infant, i.e., HYDROCEPHALUS; ANEMIA, NEONATAL; SYPHILIS, CONGEN.

6. ANIMAL and specifics
 - a. Specifics sometimes IM
 1. Importance of animal as species or genus
 2. Comparative anatomy, physiology, etc.
 3. Veterinary
 - b. ANIMALS vs ANIMAL
 1. ANIMALS seldom used, prefer specifics
 2. ANIMAL never IM
 3. Useful redundancy--this check tag is used even when an indexing term has an obvious relation to any animal, i.e., HINDLIMB; DISTEMPER; HEPATITIS, ANIMAL

7. HUMAN
 - a. Never IM
 - b. Useful redundancy--this check tag is used even when an indexing term has an obvious relation to humans, i.e., CHILD BEHAVIOR, MEN, WOMEN

8. FEMALE, MALE
 - a. Never IM
 - b. Animal or human
 - c. Useful redundancy--this check tag is used even when an indexing term has an obvious relation to either sex, i.e., OVARY, TESTIS, CERVIX NEOPLASMS, PROSTATIC NEOPLASMS

9. IN VITRO
 - a. Never IM
 - b. Limited use
 1. Not used for any research routinely performed in vitro
 2. Restricted to human or animal tissue

10. CASE REPORT
 - a. Never IM
 - b. Human or veterinary
11. COMPARATIVE STUDY
 - a. Never IM
 - b. Comparison of any two or more concepts
12. Support Tags
 - a. Never IM
 - b. Indicates source of financial support that is acknowledged in the article *support,*
13. Author Affiliation (Address(AD))
 - a. Indicates institutional affiliation of first author listed
 - b. Not directly searchable
 - c. Available only on the SDILINE *most recent month*

VII. Subheadings - 76

Workbook

A. Common groups and pairs

1. /Anatomy & Histology (AH)
 - a. /Anatomy & Histology (AH)--gross, visible, normal condition
 - b. /Cytology (CY)--cellular, microscopic, normal condition
 - c. /Pathology (PA)--a or b in disease state
 - d. /Ultrastructure (UL)--subcellular, normal or disease state
 - e. /Blood Supply (BS)
 1. Arterial, capillary or venous
 2. Used with neoplasm headings also
 - f. /Innervation (IR)
 - g. /Embryology (EM)
 1. Embryonic and fetal development of organs, regions, animals
 2. Embryologic factors contributing to postnatal disorders
 - h. /Abnormalities (AB)
 1. Congenital defects producing structural changes
2. /Physiology (PH)
 - a. /Physiology (PH)
 1. Normal function of organs, tissues, cells
 2. Physiologic role of endogenous substances (i.e., hormones)
 - b. /Physiopathology (PP)
 1. Disordered function of organs, tissues, cells in disease state
 2. Not a substitute for disease concept
 - c. /Growth & Development (GD)
 1. Used with plants, microorganisms
 2. Used for postnatal growth and development of animals or organs or anatomical parts

3. /Metabolism (ME)
 - a. General concept--process, change over a period of time
 - b. Specifics
 1. /Biosynthesis (BI)
 - a. Formation of substance in organisms, cells or subcellular fractions
 2. /Enzymology (EN)
 - a. Enzyme studies of organisms, organs, tissues
 - b. Also enzyme aspect of disease
 3. /Secretion (SE)
 - a. Only with endogenous substances
 4. /Blood (BL) /Urine (UR) /Cerebrospinal Fluid (CF)
 - a. Presence of substances in these fluids
 - b. Examination of or changes in these fluids
 - c. Differentiation from /Analysis (AN)
 5. /Deficiency (DF)
 - a. Used for absence or diminished amount relative to the normal requirement of an organism or biologic system
4. /Analysis (AN)
 - a. General concept--identification or determination of a substance or its constituents--at a given time
 - b. Specifics
 1. /Enzymology (EN)
 2. /Blood/Urine/Cerebrospinal Fluid
 3. /Isolation & Purification (IP)
 - a. Used with D category terms
 - b. Also used with bacteria, fungi, protozoa, and viruses
5. /Etiology (ET)
 - a. General concept, unspecified
 - b. Specifics
 1. /Chemically induced (CI)
 - a. HEPATITIS, TOXIC/et not HEPATITIS, TOXIC/ci
 2. /Congenital (CN)
 - a. Used for conditions existing at or even before birth
 - b. Excludes birth injuries and morphologic abnormalities
 3. /Genetics (GE)
 - a. Mechanisms of heredity in organisms
 - b. Genetic aspects of endogenous substances

4. /Immunology (IM)
 - a. Used with tissues, organs, microorganisms, fungi, viruses, animals
 - b. Used with diseases in immune activity sense; for diagnostic, preventive, therapeutic senses use the other respective subheadings
 - c. Used with substances when discussed as antigens or haptens
 5. /Microbiology (MI)
 - a. Used for microbiological studies of organs, animals, plants, diseases
 6. /Parasitology (PS)
 - a. Used for parasitological studies of organs, animals, plants, diseases
 7. /Transmission (TM)
 8. /Complications (CO)
 - a. Etiology-Complications
 - b. Complications-Complications
 9. /Secondary (SC)
 - a. Used only with neoplasm terms
 - b. Relation to NEOPLASM METASTASIS
-
6. /Diagnosis (DI)
 - a. General aspect, unspecified
 - b. Specifics
 1. /Familial & Genetic (FG)
 - a. Genetic, hereditary basis of disease
 2. /Microbiology (MI)
 3. /Parasitology (PS)
 4. /Radiography (RA)
 - a. X-ray diagnosis
 5. /Radionuclide Imaging (RI)
 - a/ Imaging or scanning, using radioisotopes
-
7. /Pharmacodynamics (PD)
 - a. Only with D category terms
 - b. Relation to /Drug Effects (DE)
 - c. /Adverse effects (AE)
 1. Unexpected results or effects
 - d. /Poisoning (PO)
 1. Acute or chronic
 2. Accidental, suicidal, medication error
 3. Environmental exposure
 - e. /Toxicity (TO)
 1. Experimental studies to determine 'if' and at 'what dose' toxic effects occur
 - f. /Chemically Induced (CI)

8. /Diagnostic Use (DU)
 - a. Used with D, H category terms
 - b. Relation to Adverse Effects (AE)
9. /Therapeutic Use (TU)
 - a. Used with D, H category terms
 - b. Relation to /Adverse Effects (AE)
10. /Therapy (TH)
 - a. General, unspecified concept
 - b. Specifics
 1. /Diet Therapy (DH)
 2. /Drug Therapy (DT)
 3. /Nursing (NU)
 4. /Prevention & Control (PC)
 5. /Radiotherapy (RT)
 6. /Rehabilitation (RH)
 7. /Surgery (SU)
 - a. /Transplantation (TR)
11. Other Subheadings
 - a. /Occurrence (OC), /Mortality (MO)
 - b. /Injuries (IN), /Radiation Effects (RE)
 - c. /Psychology (PX)
 - d. /Veterinary (VE)
 - e. /Pathogenicity (PY)
 - f. /Analog & Derivatives (AA)
 - /Antagonists & Inhibitors (AI)
 - /Chemical Synthesis (CS)
 - g. /Classification (CL), Economics (EC)
 - /Education (ED), /History (HI)
 - /Instrumentation (IS), /Methods (MT)
 - /Standards (ST)
 - h. /Legislation & Jurisprudence (LJ)
 - /Manpower (MA), /Organization & Administration (OG), /Supply & Distribution (SD), /Trends (TD)
 - /Utilization (UT)

subs apply
subs display
subs add
subs cancel

B. Searching using subheadings

(CHART II)

4.9.25

1. MH/sh
 - a. Individual subheading applied to individual descriptor
 - b. *allowed-- *MH/sh
2. SUBHEADINGS APPLY command
 - a. One or more subheadings to be used with MHs, explosions or tree numbers searched in subsequent SS/C?s
 - b. Separate the subheadings by commas, which act as ORs
 - c. Can use * with MH, EXP or tree #

- d. SUBS APPLY remains in effect during search session until cancelled by searcher
 - 1. Do another SUBS APPLY to change list of subheadings required
 - 2. Do SUBS ADD to add to list of subheadings required
 - 3. 'Bald' Subheadings *or floating*
 - a. Search for the presence of the subheading regardless of MH to which it may be attached
 - b. *not allowed

- C. Subheading vs same Main Headings (Descriptors)
 - a. MH/sh combination is preferred
 - b. MH which is same as SH is used for broad concept, general picture

6.4.1

VIII. Coordination (CHART III)

A. Types of Coordination

- 1. Main Heading + Main Heading (+ MH + MH etc.)
 - a. Terms of equal emphasis (all IM, all *, all NIM)
 - b. Terms of unequal emphasis (IM or NIM, * or not *)
- 2. Main Heading + Check Tag
 - a. Use Check tags to cover routine aspects (age groups, pregnancy, experimental animals)
- 3. Main Heading/subheading
 - a. Ties aspect directly to main point
- 4. Precoordinated Main Headings
 - a. Main point and facet combined in one term
 - b. Two main points combined in one term

- B.. Coordination for single concepts not expressed in MeSH
 - a. Use alphabetic list and trees
 - b. Use two or more descriptors

IX. MeSH Vocabulary File - *Validation*

A. Content

- 1. Descriptor Records (MH)
 - a. Major Descriptors
 - b. Minor Descriptors
- 2. Qualifier Records (SH)
 - a. Topical (Indexing) Subheadings
 - b. Cataloging Subheadings
- 3. Chemical Term Records
 - a. Records for chemical terms which are not in any printed version of MeSH

no terms term used

- B. Format
1. Dictionary File
 2. Only one unit record for each descriptor, qualifier or chemical term
- C. Availability
1. NLM and SUNY
- D. Uses
1. Validation for proper use of terms
 2. Generation of publications (Public MeSH, Annotated MeSH, Permuted MeSH, Trees)
 3. Consolidation of information in one place
 4. Presentation of information not found in publications
- E. Data Elements - Descriptor Records
- | | | |
|---|--|----------------|
| | Workbook | 6.7.1 |
| 1. (MH) MeSH Heading | | 6.8.24 |
| a. Form of descriptor used in NLM publications and printouts | | |
| b. Directly searchable | | |
| c. Textword searchable | | |
| 2. (DE) Descriptor Entry Version | Front of
Annotated MeSH
<u>VIII-IX</u> | 6.8.7
6.9.1 |
| a. Abbreviated form of descriptor | | |
| b. Data Form abbreviations | | |
| c. Omitted AND abbreviations | | |
| d. Embedded subheading abbreviations | | |
| e. Alternate forms for hyphenated terms | | |
| f. Alternate forms for terms with words ending in 'IC' or 'ICAL' | | |
| g. Alternate forms for terms with the word DISEASE(S) or DISORDER(S) | | |
| h. Directly searchable | | |
| 3. (MN) MeSH Tree Number | | 6.8.25 |
| a. Alphanumeric string designating position of the term in the trees | | |
| b. May be more than one MN for a term | | |
| c. Directly searchable | | |
| 4. (FX) Forward Cross Reference | | 6.8.18 |
| a. Indicates the major descriptor to which the MH refers in a 'see related' cross reference | | |

5. (DX) Date Major Descriptor Established 6.8.13
a. YYYYMMDD
b. First day this descriptor was available for searching as a major descriptor
c. Not searchable
6. (DY) Date Minor Descriptor Established 6.8.14
a. YYYYMMDD
b. First day this descriptor was available for searching as a minor descriptor
c. Not searchable
7. (MS) MeSH Scope Note 6.8.27
a. Free text giving the meaning and scope of a descriptor
b. Textword searchable
8. (PI) Previous Indexing 6.8.33
a. Current MeSH descriptor(s) or MH/sh combination(s) for the searcher to use to search the concept before the present descriptor became available
b. Textword searchable
9. (EC) Entry Combination 6.8.15
a. Indicates a 'legal' by category MH/sh combination which is synonymous with a precoordinated MH
b. Textword searchable
10. (TH) Thesaurus ID 6.8.48
a. Identifies thesauri other than MeSH in which the MH or one of its entry terms (BX type 0 or type 1) is included
b. Directly searchable
11. (BX) Backward Cross Reference 6.8.3
a. Type 0 = entry term nonprint = alternate forms of a descriptor other than the entry version (DE)
b. Type 1 = entry term print = 'see' cross reference
c. Type 2 = 'see under' cross reference
d. Type 3 = 'see related' cross reference
e. Only type 0 and type 1 are directly searchable
f. Only type 0 and type 1 are textword searchable
12. (AN) Annotation 6.8.1
a. Informative note
b. Initially for indexers and catalogers, but subsequently useful to searchers
c. Textword searchable

MANUAL

13. (HN) History Note 6.8.21
 a. Indicates the year since 1963 when the current form of the MH entered the system as a major or a minor descriptor
 b. Those without dates assumed to be in system since the beginning
 c. Textword searchable
14. (OL) OnLine Note 6.8.31
 a. Information helpful for online searching
 b. Indicates if MH ever existed in another form
 c. Textword searchable
15. (PM) Public MeSH Note 6.8.34
 a. Gives the year since 1963 when the current form of the descriptor entered the system as an Index Medicus term and traces certain changes in the descriptor and its cross references
 b. Textword searchable
16. (RY) Record Type 6.8.44
 a. D = Descriptor--Major or Minor
 b. Q = Subheading
 c. C = Chemical term record
17. (B##) Backfile Postings 6.8.2
 a. Any of several data elements B66, B69, B72, B75, B77, B79 that give the postings for a term in each backfile
 b. Each element has two entries: total postings; IM postings
 c. Not directly searchable
18. (RN) CAS Registry Number/EC Number 6.8.42
 a. Unique 5 to 9 digit number, in hyphenated format, assigned by CAS
 b. Code with a maximum of four nodes separated by periods, from Enzyme Nomenclature
 c. Directly searchable
- Workbook
- F. Data Elements - Subheading Records 6.7.2
1. (SH) Subheading (Qualifier Print Version) 6.8.45
 a. Form of qualifier used in NLM publications and printouts
 b. Directly searchable
2. (QE) Qualifier Entry Version 6.8.36
 a. Abbreviated form of qualifier used in indexing and cataloging
 b. Directly searchable

MANUAL

- | | | |
|----|---|----------|
| 3. | (QA) Topical Qualifier Abbreviation | 6.8.35 |
| | a. The two character abbreviation used in online searching | |
| | b. Directly searchable | |
| 4. | (QT) Qualifier Type | 6.8.39 |
| | a. type 1 = topical qualifier (etiology) | |
| | b. type 2 = form qualifier (popular works) | |
| | c. type 3 = time qualifier (19th cent.) | |
| | d. type 4 = geographic qualifier (france) | |
| | e. type 5 = language qualifier (german) | |
| | f. types 2 through 5 are used exclusively in cataloging | |
| | g. Directly searchable | |
| 5. | (MS) MeSH Scope Note | 6.8.27 |
| | a. Free text giving the meaning and scope of a qualifier | |
| | b. Textword searchable | |
| 6. | (TN) Tree Node Allowed | 6.8.49 |
| | a. A letter of a category or the first node of a subcategory of the Trees with which the qualifier may be used | |
| | b. Not searchable | |
| 7. | (NO) Note | 6.8.30 |
| | a. Indicates the date the qualifier was established | |
| | b. YYMMDD | |
| | c. Not directly searchable and not rangeable | |
| 8. | (B##) Backfile Postings | 6.8.2 |
| | a. Any of several data elements B66, B69, B72, B75, B77, B79 which give the postings for a qualifier in each backfile | |
| | b. Only one entry for total postings | |
| | c. Not directly searchable | |
| G. | Data Elements - Chemical Term Records | Workbook |
| | | 6.7.3 |
| 1. | (NM) Name of Substance | 6.8.29 |
| | a. The preferred name used as the main entry for the chemical | |
| | 1. Generic, common, nonproprietary names | |
| | 2. Trade (proprietary) or experimental names | |
| | 3. Chemical or systematic name | |
| | b. Directly searchable | |
| | c. Name fragment searchable | |

MANUAL

2. (RN) CAS Registry Number/EC Number 6.8.42
 - a. Unique 5 to 9 digit number, in hyphenated format, assigned by CAS
 - b. Enzyme Commission number
 - c. Directly searchable
3. (SY) Synonyms 6.8.47
 - a. Names for the chemical, other than those entered in the NM and N1 fields, which have been identified in MEDLINE journals
 - b. Directly searchable
 - c. Name fragment searchable
4. (N1) CAS Type 1 Name 6.8.28
 - a. Systematic name assigned by CAS
 - b. Systematic name from MEDLINE literature
 - c. Name fragment searchable
 - d. Not directly searchable
5. (HM) Heading Mapped-to 6.8.20
 - a. Indicates the MH(s) and/or MH/sh(s) used to index the chemical in MEDLINE
 - b. Directly searchable
 - c. Name fragment searchable
6. (PA) Pharmacological Action 6.8.32
 - a. MH(s) describing observed biological activity of chemical in MEDLINE literature
 - b. Directly searchable
 - c. Name fragment searchable
7. (PI) Previous Indexing 6.8.33
 - a. Suggests MH(s) or MH/sh(s) used to index the concept before the current term became available
 - b. Not searchable
8. (DA) Date of Entry 6.8.5
 - a. Represents date the chemical term was first identified in a MEDLINE journal
 - b. YYMMDD
9. (SO) Source 6.8.46
 - a. Indicates citations in MEDLINE to articles in which the chemical has been identified
 - b. Not searchable
10. (TH) Thesaurus ID 6.8.48
 - a. Indicates authoritative references where the chemical is listed (e.g., Merck Index, Negwer, USAN)
 - b. Not searchable

MANUAL

- | | | | |
|-----|------|--|--------|
| 11. | (NO) | Note | 6.8.30 |
| | | a. Consists of narrative information about the chemical, such as biological properties, additional registry numbers, salts | |
| | | b. Not searchable | |
| 12. | (UI) | Unique Identifier | 6.8.50 |
| | | a. Dummy accession number for internal use | |
| | | b. Directly searchable | |

MeSH and Related Tools

ANNOTATED MeSH

Exercise

1. What do the following abbreviations mean?

GEN	65	SPEC: SPEC qualif
IM	70(65)	All qualif
NIM coord	no qualif	TN

2. When did "habitual abortion" come into the system?
3. Missed abortion is permitted with animals. Is eugenic abortion?
Is legal abortion?
4. How do I index "blood physiology"?
5. What is a synonym for "blister"?
6. Where is "blood picture" indexed?
7. May I search for an article using EXPEDITIONS/manpower?
8. How is "exercise" searched?
9. May I search SNOW/adverse effects for frostbite from walking
in the snow?
10. When did WATER MOVEMENTS come into the system?
11. Where is "chemical water pollution" searched?
12. May a cataloger catalog a book entitled "Chemical Water Pollution in
the United States" under WATER POLLUTION, CHEMICAL/UNITED STATES?
13. Where was "water-electrolyte imbalance" indexed before 1976?
14. Is WATER/poisoning permitted?
15. How do I search micro-organisms in water?
16. An article on calcium absorption would be indexed under CALCIUM
and ABSORPTION. Is CALCIUM printed in INDEX MEDICUS? Is
ABSORPTION printed in INDEX MEDICUS?
17. Why is BIOMETRY wrong for articles on a comparison of the size
of men's and women's hands?

D. Other Descriptors

Pregnancy

SUBHEADING GROUPS

Since subheadings fall into natural groups it is possible to conceive of a display of subheadings to show relationships similar to the way MeSH headings are arranged in the MeSH Tree Structures. Like MeSH categories, the groups below should always be examined for the most specific application in the permitted category.

- | | |
|--|--------------------------------|
| /anatomy & histology | /pharmacodynamics |
| /blood supply | /administration & dosage |
| /cytology | /adverse effects |
| /embryology | /poisoning |
| /abnormalities | /toxicity |

SUBHEADINGS

Common Combinations

The groups below are commonly encountered pairings of combinations of subheadings. Add others to the list as you meet them:

(Disease A) *etiology
(Disease B) *complications - where the cause-and-effect relationship is known

(Disease A) *complications
(Disease B) *complications - where the diseases are associated but cause-and-effect is not stated

(Disease) *drug therapy
(Drug) *therapeutic use

(Organ) *drug effects
(Drug) *pharmacodynamics

(Organism) *drug effects
(Drug) *pharmacodynamics

(Organ) *metabolism
(Substance) *metabolism

(Organism) *metabolism
(Substance) *metabolism

(Disease) *metabolism
(Organ) *metabolism
(Substance) *metabolism

(Disease) *chemically induced
(Drug) *adverse effects

(Organ) *radiation effects
RADIATION EFFECTS
specific radiation

SUBHEADINGS

/metabolism

The following words appear in titles and texts frequently. In MEDLARS they are properly covered by the subheading /metabolism.

absorption	release
binding	secretion = /secretion
breakdown	splitting
conversion	storage
degradation	synthesis = /biosynthesis
distribution	transport
elimination (consider /urine)	turnover
excretion (consider /urine)	uptake
incorporation	utilization (but not the
mobilization	subheading /utilization)

/metabolism may be used with the names of organs (Category A), names of organisms (Category B), names of diseases (Category C) and names of drugs and chemicals (Category D).

PANCREAS /metabolism	(A)
SALMONELLA /metabolism	(B)
PANCREATITIS /metabolism	(C)
SODIUM /metabolism	(D)

Note that concepts such as hydrolysis, oxidation, demethylation, deamination, alkylation, etc. would fall within the definition of /metabolism also if taking place in tissue. If taking place in a test tube, without tissue present, the concepts would be considered "chemical" rather than metabolic and /metabolism would not apply.

SUBHEADING RESTRICTIONS: HEART & MYOCARDIUM

These notes appear in another form in the Indexing Manual, 14.18.

HEART and MYOCARDIUM are frequently used interchangeably by authors. The Analyst will differentiate between them in the following way, regardless of the term used by the author either in the title or the text. If the organ is viewed as a pump, the correct heading is HEART; if viewed as tissue, the correct heading is MYOCARDIUM.

Only the following Subheadings are permissible with HEART:

/anatomy & histology	/microbiology	/radiation effects
/drug effects	/parasitology	/radiography
/embryology	/physiology	/radionuclide imaging
/growth & development	/physiopathology	/transplantation

Only the following Subheadings are permissible with MYOCARDIUM:

/analysis	/immunology	/ultrastruct
/cytology	/metabolism	
/enzymology	/pathology	

Do not use the following Subheadings for these Subheadings with the concept "heart" exist in MeSH as a pre-coordinated main heading:

/abnormalities	this is	HEART DEFECTS, CONGENITAL
/blood supply	this is	CORONARY VESSELS
/injuries	this is	HEART INJURIES
/surgery	this is	HEART SURGERY

Articles on a foreign body of the heart will be indexed as HEART (IM) and FOREIGN BODIES (IM), not HEART DISEASES and not FOREIGN BODIES (NIM).

Articles on the heart in relation to pregnancy, will be indexed as HEART (IM) or any of the pre-coordinated PREGNANCY headings or any of the concepts related to pregnancy (e.g., LABOR; ANESTHESIA, OBSTETRICAL; ABORTION).

/secretion do not use with either HEART or MYOCARDIUM

USING SUBHEADINGS IN SEARCHING

Here are some reminders on the use of subheadings in doing searches:

- + subheadings are used freely by indexers so they should be used freely as applicable by searchers
- + pair a given subheading ONLY with a MeSH heading from the SAME category
- + search on the same MeSH heading with as many different subheadings as you need or want, as long as the subheading is paired with the legal MeSH heading. Indexers often use the same MeSH heading in an article with many different subheadings if these many different aspects are discussed
- + avoid searching nonsensical combinations (e.g., DIGESTION/manpower) for they should have been equally nonsensical to an indexer
- + some MeSH heading/subheading combinations are legal by category but illegal in use. Remember to search both the correct and the illegal on the off-chance that the invalid combination was forgotten by the harassed indexer
- + avoid searching on a MeSH heading which is a duplicate of a subheading for indexers never, never use them as substitutes for subheadings
- + follow announced subheading restrictions
- + do not force a borderline or questionable application into a questionable interpretation
- + use good sense

CHART I

Index Medicus (IM) vs Non Index Medicus (NIM) Concepts

1. Central, major point of the article vs Peripheral, minor points of article.

The rate of accidental injuries in childhood morbidity and lethality.

*ACCIDENTS	ADOLESCENCE
*WOUNDS AND INJURIES/oc	CHILD
	CZECHOSLOVAKIA
	HUMAN
	MORTALITY

Accidents in a geriatric department.

*ACCIDENTS	AGED
*GERIATRICS	DRUG THERAPY
*HOSPITAL DEPARTMENTS	FEMALE
	HUMAN
	INTERIOR DESIGN AND FURNITURE
	MALE
	PROSPECTIVE STUDIES

2. Organs, diseases, therapies, substances vs technics, age groups, physiological processes.

Dynamics of adaptive reactions of the heart of athletes during training.

*HEART/ph	ADAPTATION, PHYSIOLOGICAL
*PHYSICAL EDUCATION AND TRAINING	ADULT
*SPORTS MEDICINE	ELECTROENCEPHALOGRAPHY
	HUMAN
	MALE
	WRESTLING

Neurological sequelae of acute carbon monoxide intoxication.

*BRAIN DISEASES/et	BRAIN DISEASES/di
*CARBON MONOXIDE POISONING/co	CARBON MONOXIDE POISONING/di
	CASE REPORT
	CHILD
	COGNITIVE DISORDERS/di
	ELECTROENCEPHALOGRAPHY
	FEMALE
	HUMAN
	PERSONALITY DISORDERS/et
	TOMOGRAPHY, X-RAY COMPUTED

3. Animal as veterinary subject vs experimental animal.

Spontaneous degenerative lesions of peripheral nerves in aging rats.

*AGING	ANIMAL
*PERIPHERAL NERVES/pa	FEMALE
*RATS/ah	MALE
	SEX FACTORS
	SPECIES SPECIFICITY

An approach to ameliorating aggressive behavior of dogs toward children.

*AGGRESSION	ANIMALS, DOMESTIC
*BEHAVIOR THERAPY	HUMAN
*DOGS	
*CHILD	

Effect of intrapulmonary heparin in lipoprotein lipase activity in mice.

*HEPARIN/pd	ANIMAL
*LIPOPROTEIN LIPASE/me	DOSE-RESPONSE RELATIONSHIP, DRUG
*LUNG/de	INJECTIONS, INTRAVENOUS
	MALE
	MICE
	TIME FACTORS

The regulation of glucose and pyruvate formation from glutamine and citric-acid-cycle intermediates in the kidney cortex of rats, dogs, rabbits and guinea pigs.

*GLUCONEOGENESIS/de	ANIMAL
*GLUTAMINE/me	COMPARATIVE STUDY
*KIDNEY CORTEX/me	DOGS
*KREBS CYCLE	GUINEA PIGS
*PYRUVATES/bi	IN VITRO
	KETOGLUTARIC ACIDS/me
	KIDNEY CORTEX/de
	KIDNEY TUBULES/de
	KIDNEY TUBULES/me
	LACTATES/me
	PICOLINIC ACIDS/pd
	RABBITS
	RATS

4. Concept as point of the article vs concept as delimiter of the point.

Data and statistics.

*NURSING CARE	DATA COLLECTION
*RESEARCH DESIGN	
*STATISTICS	

The scientific foundation for prevention of coronary heart disease.

*CORONARY DISEASE/pc	AGING
	BEHAVIOR THERAPY
	CARDIOLOGY/mt
	HUMAN
	HYPERTENSION/pc
	LONG TERM CARE
	RISK
	SOCIOLOGY
	STATISTICS

CHART I (cont)

Clinical utility of ambulatory EEG monitoring.

*AMBULATORY CARE/mt

Examples of searching using subheadings

1. MH/sh

Articles with any mention of metabolism of imipramine

1. IMIPRAMINE/me

Articles with major emphasis on the chlorpropamide treatment of diabetes

1. *DIABETES MELLITUS/dt and
*CHLORPROPAMIDE/tu

2. Subs Apply

Articles on the causes of any urologic tumors, in English

1. Subs apply ci, cn, et, fg, sc
1. EXP *UROLOGIC NEOPLASMS
2. Subs cancel
2. 1 and ENG (LA)

Review articles on diagnosis and prognosis of myocardial infarct

1. Subs apply di, en, fg, im, ra, ri
1. *MYOCARDIAL INFARCTION
2. Subs cancel
2. *MYOCARDIAL INFARCTION and PROGNOSIS
3. 1 or 2
4. 3 and REVIEW

3. 'Bald' Subheadings

Articles on the effect of drugs (any drug) on insulin metabolism

1. INSULIN/me and pd(SH)

Articles on methods of diagnosing endocrine diseases

1. exp *ENDOCRINE DISEASES/di
2. 1 and mt (SH)
3. 1 and METHODS
4. 2 or 3

4. Use of subheading vs same main heading (descriptor)

A. Split-hand deformity

HAND/ab not HAND and ABNORMALITIES

Birth defects and counseling

ABNORMALITIES

B. Chemotherapy of kidney diseases

KIDNEY DISEASES/dt not KIDNEY DISEASES and
DRUG THERAPY

Drug therapy: from compliance to cooperation

DRUG THERAPY

Adverse reactions to drugs in general practice

DRUG THERAPY/ae

C. Metabolism of streptomycin

STREPTOMYCIN/me

On the physiological meaning of secondary metabolism

METABOLISM

Metabolic effects of clofibrate in experimental animals

METABOLISM/de
CLOFIBRATE/pd

CHART III
EXAMPLES OF COORDINATION

MeSH - Hands-On Exercises

Initial Training

1. Search for the MeSH heading Intestinal Fistula in the following ways:
 - 1) Find the number of postings; 337
 - 2) Search with the subheading "etiology"; 153
 - 3) Find the number of articles cited under this heading in Index Medicus. 75
2. Retrieve citations on the treatment of basal cell carcinoma in the elderly. 15
3. Retrieve citations on breast neoplasms resulting from mammography. 18
4. Retrieve citations on the occurrence of corneal cancer in young women. 2
5. Retrieve citations on the availability of radiologists and pharmacists in Great Britain.

MEDLINE

Updated monthly F-1
20,000 - at largest
SDILINE - current months --
- 20,000

Trainees will be able to:

1. describe the subject content, primary publication coverage and time span of the MEDLINE data base
2. describe the purpose and content, data element mnemonic, and search entry format for the following fields in the MEDLINE unit record:

MeSH Headings (MH)
MeSH Tree Number (MN)
Abstract Author (AA)
Date of Entry (DA)
Entry Month (EM)
ISSN (IS)
Language (LA)
Year (YR)
Journal Title Abbreviation (TA)
Personal Name as Subject (PS)
Date of Publication (DP)
Subheadings (SH)

3. recognize and explain the meaning of MeSH heading/subheading(s) with and without a central concept indicator, as displayed in a "PRINT" command.
4. write the proper format for searching MeSH headings/subheading combinations with and without a central concept indicator
5. identify highly posted search terms required for searching on a given set of search requests
6. explain what is meant by redundant searching
7. formulate efficient search strategies for given search requests which displays your understanding of #4 and #5 above
8. describe the purpose, entry format and results of the use of the MeSHNO and TREE commands: compare and contrast the TREE command display with the hard copy Tree Structures publication
9. identify the appropriate use of the EXPLODE search capability and its relationship to the logical OR
10. describe the entry format and results of use of the EXPLODE with and without the central concept indicator

 ABSTRACT AUTHOR Author
 ENTRY MONTH 8112
 ABSTRACT On the occasion of a recent observation in our Centre of a case of congenital renal arteriovenous fistula, we make a review of the literature and give a detailed description of the clinical case presented. We stress the difficulty in differentiating between congenital and acquired fistulae and explain the course of therapy currently used.

 TI - [Ultrasound hearings by humans: objectivation with brain stem potentials (author's transl)]
 AB - Early acoustic evoked potentials (brain stem evoked response) may be received by bone conduction after ultrasound irritation (40 kHz). In comparison with the brain stem potential which is received by the same bone conduction by 4 kHz there are differences in the pattern of the potential and in the latency shift. It may be thought of a retro-cochleare perception of the ultrasound because of the 1 msec earlier potential.

PRE-EXPLODES IN MEDLINE FILES

The Pre-Explode capability has been designed to overcome some of the limitations of the normal "EXPLODE" capability. The following list represents commonly needed large trees which have been exploded in advance and stored in the index, therefore eliminating the usual overflow message.

The Pre-Explodes are searched as NAME (PX). The word "EXPLODE" is not used. For example:

SS 4/C? NEOPLASMS (PX)

The asterisk can be used too with a pre-explode to indicate a central concept:

SS 5/C? *ENZYMES (PX)

Subheadings cannot be appended to pre-explodes, nor can the "SUBS APPLY" command be used. To link a subheading with a pre-explode, one should "AND" the two together. For example, a search on the causative agents of cancer could be searched using the pre-exploded neoplasms combined with the subheading etiology in the following way:

SS 6/C? NEOPLASMS (PX) AND ET (SH)

The available Pre-Explodes are:

MM - qualifier for chem subs.

AVAILABLE PRE-EXPLOSIONS

Pre-explosions added for 1982 are preceded by (82).

Ask end user if all types of medical education are desired. If this is the case, EDUCATION, MEDICAL should be exploded. Since there is only one tree number for this MeSH heading, the term can be exploded.

L1.178.147 should be used since it has a larger number of indentations and included the indentations under I2.903.847.297 for the heading AUDIO-VISUAL AIDS.

Separate the retrieval for each update to distinguish one from the other for end-user's clarity.

2. Mutation which is caused by air pollution.

It is important to browse up and down in MeSH for appropriate MeSH headings. For this search, one should use AIR POLLUTION as well as AIR POLLUTANTS. This is also true for MUTATION and MUTAGENS.

One will receive TIME OVFLOW messages when searching for such highly posted concepts as AUTHOR (AA) and 81 (YR). The only way to avoid this is to STRINGSEARCH for highly posted terms.

It is not necessary to textword search for the concept MANDATORY since the retrieval for this search is small. The user can browse titles for those appropriate to the request.

Health file MM & Summary

HEALTH PLANNING & ADMINISTRATION

- SCOPE: Bibliographic citations to the literature concerning the non-clinical aspects of health care delivery. Special emphasis includes health care facilities and administration, clinical equipment, financial management, legislation, accreditation, manpower and personnel, health insurance, and licensure.
- CONTENT: Includes citations from MEDLINE and an additional 350 selectively indexed health administration journals. Language is limited to English, German, and French.
- COVERAGE: 1975 to present.
- SIZE: Approximately 192,000 citations as of 12/81.
- UPDATE
SCHEDULE: Approximately 2,000 new records are added monthly.

Health Planning and Administration

Trainees will be able to:

1. Describe the scope, coverage and content of the database
2. Describe the relationship between the MEDLINE and HEALTH Unit Records
3. Identify the appropriate use of the Special List (H) tag
4. Explain the special considerations regarding ILL
5. Perform appropriate subject searches using the HEALTH file.

ABSTRACT	

Deaths and their causes in a rural Haitian population of 8820 were studied through hospital records, death registration, a disease survey, and health surveillance. The results were used in selecting eight diseases for the delivery of health services by village-level health workers. The impact of the services was measured by monitoring annual age-specific and disease-specific mortality rates and by comparing them with officially estimated national mortality rates. Mortality rates fell progressively during five years, to levels only one fourth as high as the national estimates. The fall in mortality was associated principally with services that prevented deaths due to tetanus, malnutrition, diarrhea, and tuberculosis. The total program of hospital and village health services saved 495 years of potential life per thousand population per year. Most of the savings was attributable to preventive services. The program eventually served more than 115,000 persons, and it has been replicated by other agencies for an additional 135,000 Haitians.
N Engl J Med 1981 May 28;304(22):1324-30

CORE JOURNALS INDEXED FOR HEALTH FILE

The following is a core list of 34 journals which are indexed cover to cover for the HEALTH file. In addition to these titles, another 300 titles are indexed selectively. Of the selectively indexed titles, many include layman publications such as the Wall Street Journal and U. S. News and World Report which are routinely monitored for relevant articles. All journals indexed for the HEALTH file are non-clinical in scope and emphasize the facilities and costs of health care rather than the patient or disease.

1. American Lung Association Bulletin
2. American Rehabilitation
3. Bulletin - American Protestant Hospital Association
4. Critical Care Quarterly
5. Consumer Health Perspectives
6. Contemporary Pharmacy Practice
7. Cross-Reference on Human Resources Management
8. Family and Community Health
9. Health Care in Canada
10. Health Care Management Review
11. Hospital Administration Currents
12. Hospital Financial Management
13. Hospital Forum
14. Hospital and Health Services Administration
15. Hospital Medical Staff
16. Hospital Supervisors Bulletin
17. Hospital Trustee
18. How to Evaluate Health Programs
19. Journal of Ambulatory Care Management
20. Journal - American Health Care Association
21. Journal of Economics and Business
22. Journal of Health and Human Resources Administration
23. Journal of Long Term Care Administration
24. Journal of Medical Systems
25. Journal - National Association for Hospital Development
26. Journal - National Association of Private Psychiatric Hospitals
27. Law and Contemporary Problems
28. Long Term Care and Health Services Administration Quarterly

SS 6/C?

USER:

5 and h (1i)

PROG:

SS (6) PSTG (21)

AREAWIDE PLANNING is a "see" ref. to REGIONAL HEALTH PLANNING. Either may be used.

The use of Permuted MeSH is helpful for the psychiatric concept. One also wants to retrieve psychiatric facilities both in and out of the hospital setting. Note the use of the data form PSYCHIATR DEP for the MeSH heading, PSYCHIATRIC DEPARTMENT, HOSPITAL which is over 30 characters.

2. Retrieve citations on training the physical therapist.

SS 7/C?
USER:
physical therapy/ed
PROG:
SS (7) PSTG (108)

Since the HEALTH File does not include clinical information, searching PHYSICAL THERAPY/ed retrieves information about educating the therapist and not the patient.

3. Find information about the growing number of mothers who want to have their babies at home.

SS 2/C?
USER:
EXP LABOR OR EXP DELIVERY
PROG:
SS (2) PSTG (1395)

SS 3/C?
USER:
MIDWIFERY OR NURSE MIDWIVES
PROG:
SS (3) PSTG (548)

SS 4/C?
USER:
3 OR HOME NURSING OR EXP HOME CARE SERVICES
PROG:
SS (4) PSTG (2291)

SS 5/C?
USER:
2 AND 4
PROG:
SS (5) PSTG (149)

LABOR, DELIVERY, and HOMECARE SERVICES appear once in their respective trees, so exploding on the terms is appropriate. Since most midwives are involved in home deliveries, MeSH headings MIDWIFERY and NURSE MIDWIVES are used.

*Back 75-66 not online*OFFSEARCHMANUAL

PART 5

Uses:

- Only way to search backfiles not available online
- Only way to execute STORESEARCH
- Search more than one file at a time

To enter OFFSEARCH mode, after any USER: cue type the command

OFFSEARCH

The OFFSEARCH command:

- Does not change the file to which you were connected when you issued the command
- Erases your scratch pad
- Does not allow direct access to the backfiles

3 parts to an OFFSEARCH:

- 1) Search information section
- 2) Search strategy
- 3) User information section

Taskname = 57132015

PART 1: SEARCH INFORMATION SECTION -

When OFFSEARCH command entered, the program gives you the taskname by which this OFFSEARCH is known and asks the question:

ONLINE OUTPUT:--NPS/PSTG/NONE?

The user may respond to this question with one of three options. These are explained as follows:

NONE

-- Gives no feedback during search strategy; not recommended

PSTG

-- Causes the program to perform the search online while the terms are being entered; gives postings from the file to which you were connected when you typed the OFFSEARCH command

-- Results are saved on your scratch pad and can be used in searching after the OFFSEARCH is completed

-- Allows you to print out citations during the OFFSEARCH procedure (browse) in order to check strategy; you may NOT, however, use the PRINT OFFLINE command

NPS

-- Merely checks the terms you enter against the index file of the file to which you were connected when you issued the OFFSEARCH command; will notify you if there are no postings to a given term

-- Does not actually perform the search

-- You must use this option if you are using a STORESEARCH in your OFFSEARCH

The next question you are asked is:

FILES?

Respond by typing the name(s) of the file(s) you want the OFFSEARCH to be performed against

-- A maximum of six files may be requested for a single OFFSEARCH

-- The MEDLINE backfiles have three variations of name:

BACK66	MED66	B66
BACK69	MED69	B69
BACK72	MED72	B72
BACK75	MED75	B75
BACK77	MED77	B77
BACK79	MED79	B79

Any of the variations may be used in response to the files query

-- It is suggested that only similar files be searched together in the same OFFSEARCH because of differences in types of available search terms and in file emphasis

SDILINE, MEDLINE, the MEDLINE backfiles and the HEALTH file are all similar files, and any six could be searched in the same OFFSEARCH

TOXLINE, TOXBACK65 and TOXBACK74 are similar files, and AVLINE and CATLINE are similar files. An example of a pair of dissimilar files is MEDLINE and TOXLINE

The next question is:

PRINTSPECS?

You may respond with one of the standard print format names:

SD (For standard, author, title, source; standard print varies with data base)

FU (For full)

DL (For detailed)

or you may specify data element abbreviations:

For example -

AU, TI, SO, LA, MH

IMPORTANT - If you are searching dissimilar files in one OFFSEARCH, you MUST use one of the three standardized print formats (SD, FU, DL) in response to this query - you may NOT specify individual elements OR use an include or exclude

After you have entered your PRINTSPECS, the program sends you the message:

PRINT ELEMENTS, IF ANY, WILL BE EVALUATED AGAINST THE (FIRST FILE NAME YOU TYPED) FILE.

This means that the data elements you have asked for (if you have not used one of the standardized formats) will be evaluated against a list of which data elements are available for that file. If, for example, you have asked for AB (Abstract) and have requested the BACK66 file first, you will receive an error message, because there are no abstracts in that file.

You will next be asked to agree that all that has been entered so far is correct with this question:

OK? (Y/N/C/ADDRESS)

If you answer Y or YES, the program will proceed with the OFFSEARCH

If you answer N or NO, the program will begin again at the first question (ONLINE OUTPUT?) and let you answer each question again (a new taskname will also be given)

If you answer C or CANCEL, the program will send a message:

OFFSEARCH COMMAND HAS BEEN CANCELLED

and return you to a search statement prompt - SS 1/C?

If you answer address to the question, the program will print out the stored address, if any, attached to the userid code you have used to log in.

PART 2: SEARCH STRATEGY -

The program sends the message:

ENTER SEARCH -

STS SS 1/C?

eraseback to correct

The *STS* is to remind you that you are in a storage mode; enter your search formulation as usual. Remember that:

- If you explode a term that occurs in more than one tree and receive a multi-meaning message online, regardless of which number you type during the OFFSEARCH, when the search is done during the night ALL trees will be used; this sometimes causes a noticeable difference in the number of citations retrieved
- The RESTACK, ELEMENTS and PRINT OFFLINE commands cannot be used
- It is urged that you use the ERASEBACK or BACKUP command to get rid of unnecessary search statements

When you have entered the entire strategy, type:

FINISHED

PART 3: USER INFORMATION SECTION -

You will be asked the question:

SSNOS/OVRIDES? *Search statement nos.*

- Answer with the number(s) of the search statement(s) from which you wish retrieval to be printed
- You may not enter more than five search statement numbers
- A maximum of 500 citations will be printed out from each search statement requested *per data base*
- Separate the numbers with a comma and space
- You may use the LIMIT instruction to limit the number of citations received in the mail by entering the following after any subsequent USER: cue

LIMIT = 100 (any number under 500)

The next question will be:

SEARCH TITLE, OR NONE -

You are advised to use a title on all OFFSEARCHES, as it will make proper tearing and mailing of the printout easier.

Mail = prompt rather than

If you DO NOT have a stored address, the program will ask:

NAME? Enter the name to which the output should be mailed

ADDRESS?

CITY, STATE (PLEASE DO NOT ABBREVIATE) AND ZIP -

NOTE: Only 3 lines are permissible for entry of complete address; do not exceed 50 characters across on any address line)

The last question you will be asked is:

REQUESTER'S NAME, OR SAME-

Either type the name of a person or organizational unit requesting the search, or type SAME

This is your LAST CHANCE to enter the command

OFFSEARCH CANCEL

or to correct any erroneous input

After you have answered this question, the program replies:

OFFSEARCH COMPLETED

If you need to cancel the OFFSEARCH after this message has been received, call MEDLARS Management Section and request that it be cancelled; be sure you can give the taskname and which computer (NLM or SUNY). You must call on the same day the OFFSEARCH was entered.

LIMITS IN OFFSEARCH:

- Processing time cannot exceed 240 seconds; if it does, the entire OFFSEARCH will be purged and you will be notified
- No more than 3000 citations may be stringsearched in one instruction; if such a stringsearch is attempted, the OFFSEARCH will be purged and you will be notified

PRESPECIFICATION IN OFFSEARCH:

You may correct or prespecify (pre-answer questions) items in the search information and user information parts of an OFFSEARCH using these keywords:

ONOUTS	NAME
FILES	ADDRESS
PRINTSPECS	CITSTAZIP
SSNOS/OVRIDES	TITLE
	REQUESTER

To correct or prespecify, type the keyword, space, an equals sign, space, and the correct information

For example:

USER:

PRINTSPECS = AU, TI, SO, MH, AB

FREE TEXT SEARCHING
TEXT WORD EXERCISE

1. Find articles in MEDLINE about the Olympic games.

The important words to consider in this request are OLYMPIC and OLYMPICS. There are two ways in which they might be entered, by ORing the two Text Words together-

(TW) OLYMPIC OR OLYMPICS

or by using the # to substitute for either a blank space or the S -

(TW) OLYMPIC#

To avoid answering ALL in response to the Multi-Meaning Message, the question can be pre-answered in the search statement-

(TW) ALL OLYMPIC#

The same set of citations is retrieved in all three cases. To reduce the number of false drops, such as an article titled "Legislative commentary: the Olympics of politics," the searcher might combine the original retrieval with Text Words GAME, GAMES, SPORT, and SPORTS. Again, this can be done by ORing all four together-

(TW) GAME OR GAMES OR SPORT OR SPORTS

or by using the # for plurals and preceding each term with ALL-

(TW) ALL GAME# OR ~~ALL~~ SPORT#

As an additional option, the searcher might combine the retrieval with the MeSH headings SPORTS and SPORTS MEDICINE, either by entering each term separately-

SPORTS OR SPORTS MEDICINE OR ALL GAME# OR ALL SPORT#

(the ALL allows GAME# and SPORT# to be retrieved as Text Words without being qualified (TW)) or by combining common roots-

ALL SPORT: OR ALL GAME#

The SPORTS MeSH headings will be retrieved as well as the Text Words.

2. Find: Sports as a text word

(TW) SPORTS

Sports as a MeSH heading

SPORTS (no qualifier needed)

Sports as a text word and/or MeSH heading

ALL SPORTS

3. CHINESE RESTAURANT SYNDROME

The two important words are CHINESE and RESTAURANT-

(TW) CHINESE AND RESTAURANT

The retrieval is so small that the titles may be scanned by the searcher for relevance without further time-consuming refinements to the strategy.

4. G6PD - What is the MeSH heading?

When confronted with a word about which no information is available, the searcher should try a preliminary Text Word search-

(TW) G6PD

In MEDLINE this retrieves about 100 citations. By printing out some titles, the searcher can find a likely-looking phrase-

TI - A simple screening procedure for adenylate kinase, hexokinase, and glucose-6-phosphate dehydrogenase deficiencies.

When the abstract of this article is printed, the abbreviation (G6PD) appears after this phrase. Turning now to MeSH, the searcher finds a term GLUCOSEPHOSPHATE DEHYDROGENASE. By ANDing this term with the G6PD retrieval, it is found that many of the citations do contain this heading. Of course, you can't be absolutely sure that G6PD means GLUCOSEPHOSPHATE DEHYDROGENASE to the requester unless you ask.

5. Therapeutic use of chicken soup.

First search for the Text Words -

(TW) CHICKEN AND SOUP

The small number of citations can be read for relevance more efficiently than refining the strategy further with the therapeutic use concept.

6. Tourette's Syndrome - what is the MeSH heading?

The Text Word term generation program turns the word Tourette's into two words: TOURETTE and S. In most cases, only the root is necessary for retrieval (i.e. Tourette); a searcher may also consider the form TOURETTES. If, after browsing some titles, the searcher decides to include the concept of SYNDROME (sometimes also expressed as DISEASE by authors who use the words synonymously) these text words may be included.

```
SS 1 (TW) TOURETTE
SS 2 (TW) DISEASE OR SYNDROME
SS 3 1 AND 2
PRINT TI,MH 5
```

Scan the MeSH headings to see what term from the controlled vocabulary is used for this syndrome; i.e. Gilles De La Tourette's Disease.

STORESEARCH/SAVESEARCH/SAVE

Trainees will be able to:

1. Explain the uses of STORESEARCH/SAVESEARCH/SAVE
2. Define the ELHILL commands associated with STORESEARCH/SAVESEARCH/SAVE
3. List the restrictions for naming a STORESEARCH/SAVESEARCH/SAVE
4. Describe the procedure for execution of a STORESEARCH by the user through OFFSEARCH and the online or OFFSEARCH execution of SAVESEARCH/SAVE

STORESEARCH

Manual

I. Uses

5.6

- A. Perform the same search at repeated intervals (SDI)
- B. Perform a search against various data bases
- C. Store large groups of related concepts as a hedge to be used repeatedly in other searches

Superseded

II. Input Procedure

5.8

A. STORESEARCH

- 1. Command which initiates storing of a search
- 2. User should be connected to the file against which the storesearch will be run

B. SEARCHNAME?

→ SN

- 1. Name cannot be longer than 30 characters
- 2. Only one search per name
- 3. Names cannot be purely numeric
- 4. Names cannot contain Boolean operators or special characters

C. ONLINE OUTPUT -- NPS/PSTG/NONE?

- 1. NPS - search will not be performed online upon input, but search terms will be validated against the index
- 2. PSTG - search will be run online against the file you are connected to
- 3. NONE - search will not be performed online, no validation occurs

D. ENTER SEARCH -

E. FINISHED

Only the last statement will be printed

F. STORESEARCH COMPLETED

G. DISPLAY SEARCHNAME

Check the next day

III. Execution of STORESEARCH

5.9

A. Must be in OFFSEARCH

B. Must be in NPS option

C. Use searchname and (SN) qualifier
STS SS 1/C? HUMAN (SN)

IV. Automatic SDI Service

5.12

A. User stores search at the NLM computer using special naming conventions

B. User tests searching through use of DIAGRAM and OFFSEARCH

C. Automatic SDI Request Form is filled out and sent to NLM

D. Search is automatically run against monthly update and mailed to user

V. Deleting STORESEARCH

5.11

A. PURGESEARCH SEARCHNAME

Do not use (SN) qualifier

STORESEARCH

The following example illustrates the storing of an automatic SDI search formulation:

SS 1/C?
USER:
FILE SDILINE
PROG:
YOU ARE NOW CONNECTED TO THE SDILINE FILE.

SS 1/C?
USER:

(Note: Qualifier (SN) is not used within a command)

SAVE/SAVESEARCH - 2 Commands

MANUAL
4.9.22

USES:

- to perform a search against various data bases
- to retain small frequently used search strategies for use online (for larger searches, hedges, or SDIs use STORESEARCH/OFFSEARCH)

NOTE:

These commands add search formulations to the Unified User Specification File (UUSF) storage area attached to the user ID with which the searcher logged in. Because there is a limited amount of saved search storage space in the UUSF, it is suggested that elaborate search formulations, such as those for recurring SDIs, be stored in the STORE SEARCH area (not part of the limited UUSF), and that the saved search area be used for smaller searches used frequently online or for current searches to be executed against more than one data base.

THE COMMANDS:

A. SAVE

- used AFTER a formulation has been entered
- will not save search statements that retrieved no postings message
- only last search statement in SAVE retrieves postings when executed

EXAMPLE:

```

FILE MEDLINE

PROG:
YOU ARE NOW CONNECTED TO THE MEDLINE FILE.

SS 1/C?
USER:
ALL METHAPYRILENE
PROG:
SS (1) PSTG (9)

```

MANUAL

SS 2/C
 USER:
 (TW) METAPYRILENE OR RESTRYL OR PARADORMALENE
 PROG:
 NP (METAPYRILENE (TW))
 NP (RESTRYL (TW))
 NP (PARADORMALENE (TW))

SS 2/C?
 USER:
 91-80-5
 PROG:

SS 2/C?
 USER:
 SAVE
 PROG:
 SEARCHNAME?

USER:
 METHAPYRILENE
 PROG:
 SEARCH SET FROM SS 1 SAVED AS 'METHAPYRILENE'.

NOTE:

- only SS 1 saved
- all search statements that retrieved no postings are NOT saved
- postings retained online but are not part of the search strategy saved; strategy only saved in UUSF; not current online postings

B. SAVESEARCH

- used BEFORE a formulation is entered
- all search statements entered are saved whether or not they retrieved citations when entered during SAVESEARCH while connected to a particular data base
- only last search statement in a SAVESEARCH retrieves postings when executed

**STS* save everything*MANUAL

EXAMPLE:

FILE MEDLINE

PROG:
YOU ARE NOW CONNECTED TO THE MEDLINE FILE.

SS 1/C?
USER:

SEARCHNAME? (indicates to computer when input
of SAVESEARCH complete)

USER:
METHAPYRILENE MED TOX
PROG:
SEARCH SET FROM SS 1 SAVED AS 'METHAPYRILENE MED TOX'.
SAVESEARCH COMPLETED.

MANUAL

NOTE:

- all search statements saved whether or not they retrieved postings in MEDLINE
- postings retained online but are not part of the search strategy saved; strategy only saved in UUSF, not current online postings

EXECUTION:

- use SAVE or SAVESEARCH name and (SN) qualifier
- enter as any other search term

A. SAVE

MEDLINE

SS 1/C?

USEP:

METHAPYRILENE (SN)

PROG:

SS (1) PSTG (9)

(postings retrieved from last search statement only; search statements that had retrieved no postings are not present)

TOXLINE

SS 1/C?

USER:

METHAPYRILENE (SN)

PROG:

SS (1) PSTG (50)

(postings retrieved from last search statement only; search statements that had retrieved no postings are not present)

B. SAVESEARCH

MEDLINE

SS 1/C?

USER:

METHAPYRILENE MED TOX (SN)

PROG:

SS (5) PSTG (9)

(postings retrieved from last search statement only; search statements that had retrieved no postings are present, but in this case do not increase MEDLINE retrieval)

TOXLINE

SS 1/C?

USER:

METHAPYRILENE MED TOX (SN)

PROG:

SS (1) PSTG (91)

(postings retrieved from last search statement only; search statements that retrieved no postings are present; note increased retrieval over METHAPYRILENE SAVESEARCH where NO POSTINGS statements lost)

NOTE:

The METHAPYRILENE SAVE search and the SAVESEARCH METHAPYRILENE MED TOX when executed retrieved the same postings in MEDLINE even though the search statements that retrieved no postings were retained in the SAVESEARCH. This is because SS 2 and SS 3 retrieved no postings on MEDLINE; SS 4 (combined retrieval of SS 1, SS 2, SS 3) was the result of SS 1 only which was the same search statement as the SS 1 executed in SAVE.

However, in TOXLINE, METHAPYRILENE SAVE search and the SAVESEARCH METHAPYRILENE MED TOX when executed retrieved different postings. This is because SS 2 and SS 3 resulted in postings; therefore SS 4 (the combined retrieval of SS 1, SS 2, SS 3) resulted in a greater retrieval than the SS 1 which was the only search statement saved and executed by SAVE. Here the "saving" of the search statements that retrieved no postings was an advantage.

SEARCHNAME

- name cannot be longer than 30 characters
- only one search per name
- names cannot be purely numeric
- names cannot contain Boolean operators or special characters

SAVE LIST

- to list out all SAVE/SAVESEARCHes stored in UUSF
- gives amount of storage space left in SAVESEARCH/PROFILE AREA

e.g.

```

USER:
SAVE LIST
PROG:
YOU NOW HAVE 2 SAVE SEARCHES.
METHAPYRILENE
METHAPYRILENE MED TOX
THERE IS 90 PERCENT FREE SPACE IN YOUR
SAVESEARCH/PROFILE AREA.

```

DELETING A SAVE/SAVESEARCH

enter: SAVE Searchname REMOVE

e.g.

USER:

SAVE METHAPYRILENE MED TOX REMOVE

PROG:

SAVED SEARCH 'METHAPYRILENE MED TOX' DELETED

DIAGRAM/DISPLAY

-- to display search formulation of SAVE/SAVESEARCH

-- do not use (SN) qualifier

e.g.

USER:

DISPLAY METHAPYRILENE

GENERAL

SAVESEARCH and SAVE are designed primarily to retain small frequently used search strategies and/or for executing the same search in more than one file online. If you save complex or large search strategies e.g., journal holdings, you may quickly use up your SAVESEARCH/SAVE environment or you may be unable to execute the search online due to system limitations. Use STORESEARCH for large, complex searches. Also, be careful if you have included MeSH Headings in your "saved" strategy to execute it only in files containing MeSH headings.

The example in the manual replacement pages, Part 4.9.22 is only for illustrative purposes; it will generate an overflow condition and the search cannot be executed.

FREE TEXT SEARCHING

Trainees will be able to:

1. list the rules for computer generation of text words
2. apply rules of text word generation to a sample text, identifying those strings of characters which are saved and those which are deleted
3. list sources of text words for use in free text formulation
4. develop free text formulations for given search requests, using the NBR command and applying truncation as appropriate
5. describe techniques for browsing the various NLM databases so as to expand or narrow retrieval in an heuristic fashion

TEXT WORD SEARCHING

MANUAL

I. Introduction and Definition

4.7

- A. Subject searching - controlled vocabulary vs. free text
- B. Sources of text words
 - 1. Title
 - 2. Abstract
 - 3. Other defined fields
- C. Definition of text word - single words of up to 39 contiguous alpha or alphanumeric characters
- D. Text word generation computer program for all ELHILL files (except CHEMLINE)

II. Rules for Text Word Generation

4.7.1

- A. Spaces are delimiters
- B. Punctuation and special characters are converted to spaces
- C. Drop common words that appear on Stop Word List
- D. Drop numeric strings
- E. Hyphen rule - these special strings are saved as text words
 - 1. A hyphen followed by a single alphabetic character and preceded by a numeric string
XXX-A
 - 2. A hyphen followed by a numeric string and preceded by one, two or three alphabetic characters

ABC-XXX
AB-XXX
A-XX

III. Text Word Searching

- A. Multi-term concepts - use logical 'AND'
- B. Synonyms and related terms - use logical 'OR'
 - 1. Synonyms
 - 2. Plural and singular forms
 - 3. Variant spellings and endings
 - 4. Latin, Greek and English forms
 - 5. Nouns and adjectives
 - 6. An organ and its various parts
 - 7. Organ, diseases of an organ, causes of diseases
 - 8. Normal and abnormal states
- C. Sources for text words
 - 1. MeSH Trees
 - 2. Online browsing of titles and abstracts
 - 3. Reference tools
 - 4. Requestor

IV. Search Strategy Hints

- A. Use NBR command 4.9.13
- B. Truncation
 - 1. Hash mark (#) *substitutes for one character* 4.4.4
 - 2. Colon (:) " *for longer* 4.4.3

IV. Search Strategy Hints (continued)

- C. Use of ALL preceding term 4.4.2
1. To avoid a Multi-Meaning Message
 2. To override the system default
- D. Use of category qualifiers 4.4.2
1. Prequalification *before term*
 2. Postqualification *after*

TEXT WORD GENERATION RULES

1. A hyphen is a delimiter in an alphabetic string.

EXAMPLE:

Y-BODIES

IN THE INDEX
becomes

BODIES (TW)

•••
Y (TW)

Construct a Search Formulation:

2. Apostrophe S

' is deleted, S is saved.

EXAMPLE:

HASHIMOTO'S DISEASE

in the index
becomes

DISEASE (TW)

•••
HASHIMOTO (TW)

•••
S (TW)

Construct a Search Formulation:

A word ending in an ' (apostrophe), the ' is deleted.

EXAMPLE:

COOMBS' TEST

in the index
becomes

COOMBS (TW)

•••
TEST (TW)

Construct a Search Formulation:

FREE TEXT SEARCHING
TEXT WORD GENERATION RULES

3. Alphanumerics

a. Leading & trailing numbers are deleted. See b. & c. for exceptions.

EXAMPLE:

13-CARBON	<i>in the index</i>	CARBON (TW)
CARBON-13	<i>becomes</i>	
CARBON 13		
CARBON13	<i>in the index</i>	CARBON13 (TW)
	<i>becomes</i>	

Construct a Search Formulation:

b. A numeric string separated by a hyphen and followed by a single alphabetic character is treated as a text word.

EXAMPLE:

PYROZOLO(2,3-A)(1,3,5)TRIAZINES	<i>in the index</i>	PYROZOLO (TW)
	<i>becomes</i>	... TRIAZINES (TW)
		... 2,3-A (TW)

Construct a Search Formulation:

c. One, two, or three alphabetic characters preceding and separated by a hyphen from a numeric string forms a contiguous string and is treated as a text word.

EXAMPLE:

F-5050	<i>in the index</i>	F-5050 (TW)
	<i>becomes</i>	... KF-100 (TW)
KF-100		... SKF-525 (TW)
SKF-525

EXERCISE: TEXTTRACT THE FOLLOWING SENTENCE.

Thus, 36 g of 7-ethyl-4,7-dihydro-2-methyl-4-oxo-thieno(2,3-B)pyridine-5-carboxylic acid was mixed with feed and given to a group of 6000 sweetfish (av. body wt. apprx. 20 g) each day for 4 days.

VARIANT ENGLISH SPELLINGS AND TEXT WORD SEARCHING
Robin Chivers, Index Section, NLM

When text word searching in MEDLINE, in order to insure complete retrieval, one should be aware of variant English spellings. In general, longer spellings of words are used in Britain and countries where British spelling is preferred, such as Australia, India, New Zealand, South Africa, etc.

1. Some British authors use short forms.
2. Some North American authors use longer forms.
3. Some European journals use both forms.

There is no uniformity of word usage in any particular country or journal. In any particular journal, spelling will depend on the whims of the author and editorial policy.

A sample of the more common variants is given below. Note that not all are shorter/longer forms; some involve replacement of one consonant by another, transposition of two letters, etc.

<u>North American</u>	<u>British</u>	<u>North American</u>	<u>British</u>
E	AE	F	PH
Anesthesia	Anaesthesia	Sulf- (sulfates)	Sulph- (sulphates)
Cecum	Caecum		
Cesarean sect.	Caesarean sect.	IZ	IS
-emia (anemia)	-aemia (anaemia)		
Etiology	Aetiology	Organization	Organisation
Feces	Faeces		
Gynecology	Gynaecology	K	C
Hem- (hematuria)	Haem- (haematuria)		
Medieval	Mediaeval	Leukocyte	Leucocyte
Orthopedics	Orthopaedics	L	LL
E	OE	Counseling	Counselling
Celiac	Coeliac		
Edema	Oedema	OR	OUR
Esophagus	Oesophagus		
Estrus	Oestrus	Labor	Labour
Fetus	Foetus	Color	Colour
-rrhea (diarrhea)	-rrhoea (diarrhoea)	Odor	Odour
		Tumor	Tumour

<u>North American</u>	<u>British</u>	<u>North American</u>	<u>British</u>
ER	RE	CTION	XION
Center	Centre	Connection	Connexion
Fiberoptics	Fibreoptics	Reflection	Reflexion
Goiter	Goitre		
Liter	Litre		
Meter	Metre		
Theater	Theatre		

MISCELLANEOUS

Hiccup	Hiccough
Jewelry	Jewellery
Licorice	Liquorice
Program	Programme

Consider, for example, the search topic "Pediatric esophageal tumors presenting to community health centers." Naturally, this could be done using main headings and check tags, but if using text words, consider the following:

PEDIATRIC (TW) OR PAEDIATRIC (TW)
 ESOPHAGEAL (TW) OR OESOPHAGEAL (TW)
 TUMORS (TW) OR TUMOURS (TW)
 CENTERS (TW) OR CENTRES (TW)

Keep in mind also the use of different British words for North American concepts. For example:

MATRON for Director of nurses
 OPERATING THEATRE for Operating room

The trend for the future appears to be for shortened spelling, so this variant spelling should be a diminishing problem. Meanwhile, for thorough text word searching, variant spellings should be included.

MANUAL

TRUNCATION

A. Hash Mark (#) 4.4.4

1. Single character variation symbol
2. Within a term, will not substitute for a lack of a character
3. At the end of a term, will substitute for a space or for a single character
4. Use of the hash mark will often produce a multi-meaning message
5. May use up to two hash marks together - ##

EXAMPLE: SS 1/C? HEART# (TW)

MM (HEART#) (3)
 1. HEART (TW)
 2. HEARTH (TW)
 3. HEARTS (TW)

SPECIFY NUMBERS, ALL, OR NONE -

B. Colon (:) 4.4.3

1. Multiple character variation symbol
2. Within a term and at the end of a term, will substitute for any number of spaces or characters
3. Use of the colon will always produce a multi-meaning message

EXAMPLE: SS 1/C? PASSIV: (TW)

MM (PASSIV:) (8)
 1. PASSIVATED (TW)
 2. PASSIVATION (TW)
 3. PASSIVE (TW)
 4. PASSIVELY (TW)
 5. PASSIVENESS (TW)
 6. PASSIVES (TW)
 7. PASSIVISTS (TW)
 8. PASSIVITY (TW)

SPECIFY NUMBERS, ALL OR NONE -

Risks in Truncating:

1. False Drops
2. Genterm Overflow Message (GENTRM OVFL)
 - 450 terms or more ORed together

FREE TEXT SEARCHING

TEXT WORD EXERCISE

Find articles in MEDLINE on the following topics. Use synonyms and various word endings when using text words; also use MeSH as appropriate.

1. ^(NW) OLYMPIC games 13
2. Find: Sports as a text word
Sports as a MeSH heading
Sports as a text word and/or MeSH heading
3. ^(NW) CHINESE RESTAURANT SYNDROME
4. G6PD - What is the MeSH heading?
5. Therapeutic use of chicken soup

STRINGSEARCH/SENTENCESEARCH

Trainees will be able to:

1. describe the purpose and limitations of stringsearch and sentencesearch and the impact on the NLM system of the use of these capabilities
2. compare and contrast computer processing of a direct search of the database index file with a stringsearch or sentencesearch
3. list four reasons for using stringsearch and sentencesearch
4. discuss similarities and differences between stringsearch and sentencesearch
5. prepare appropriate stringsearch and sentencesearch statements using proper format for required and optional elements for given search requests
6. describe the optional and system limitations on the use of stringsearch in online searches and OFFSEARCH

STRINGSEARCH

MANUAL

I. Definition and comparison with direct search

4.6.3

- A. Method of searching the unit record for a specific character string

- B. Avoid stringsearch in OFFSEARCH, STORESEARCH

- 1. By-passes normal searching procedure

V. Examples

- 2. Goes directly to the "header" file

- B. Requires a previous subset of retrieval of less than 300 postings (approximately)

- C. Performs search on oldest citations first

II. Uses

- A. To determine word adjacency

- B. To search for STOPWORDS, NUMERICS

- C. To perform left-handed truncation

- D. To more efficiently search for highly posted terms (checktags, language) from a small subset

III. Format

4.6.3.1

TS 5 SKIP 100 (TI) :XXXX:

- A. Search strategy name

- 1. TS, STRS, STRINGSEARCH or TITLESEARCH

- B. Search statement number (optional)

- 1. If no number specified, the stringsearch will be performed on the last retrieval

III. Format (continued)

4.6.3.1

2. Enter number alone bounded by spaces
3. SKIP instruction may also be used

C. Category qualifier (optional)

1. Indicate the category qualifier (in parentheses) of the field to be searched
2. This field must exist on the unit record as "hard" data
3. If no field is indicated, the system will stringsearch the "default" field defined for the database being searched

D. Character string to be searched

1. Enclose in colons
2. Spaces are legitimate characters; placement of spaces within colons is meaningful
3. If colons are omitted, right-hand truncation assumed
4. Disguise punctuation characters with (#)

E. Use of boolean connectors

F. Use of category qualifiers; prequalification, postqualification

G. Search is "time-sliced"
(N) SEARCHED AND (N) QUALIFIED

STRINGSEARCH

IV. Limitations

4.6.3.2

EXAMPLE: Searching for highly posted terms

- A. Limit retrieval as much as possible before stringsearching
- B. Avoid stringsearch in OFFSEARCH, STORESEARCH

JUDICIOUS USE OF STRINGSEARCH IN ONLINE AND OFFLINE SEARCHES

David L. Kenton, Staff Assistant, OCCS

In August 1973, an article entitled "MEDLINE Search Optimization for Efficient Processing" appeared in the Library Network/Medlars Technical Bulletin (pp 8-17). Although this article was published before the present ELHILL 3 program was installed and mainly addressed the searching algorithms of ELHILL 2, many of its guidelines remain remarkably current to our present system. We recommend its review by users of the MEDLINE service.

In order to write a sequel to the article, it would be necessary to address all the changes introduced with ELHILL 3 which would dilute the main purpose of this article; therefore this presentation will deal exclusively with one subject. Subsequent articles will cover additional aspects of offsearching.

STRINGSEARCHING (TS, STRS) uses more machine resources than any other function in ELHILL 3. Why? When a user executes this function, the machine is forced to examine each citation individually and interrogate it looking for the requested character string(s). It requires about the same time for the machine to TS one citation as to print it. Hence, the STRINGSEARCHING or printing of large number of citations should be avoided. Sometimes it cannot be avoided, but then one must try to "reduce" the number of citations to be TS'ed. This article will present some ways to limit the number of citations when searching and some suggestions as to when and how to use STRINGSEARCH.

ONLINE USE

The NLM recommends that the user pull ENG (LA), HUMAN (MH) and other highly-posted terms from a subsearch of 200 or less citations in the MEDLINE (not SDILINE) data base by doing a STRINGSEARCH as follows:

```

PROG:
SS 1/C?
USER:
DOPA AND DOPAMINE AND METHYLDOPA
PROG:
SS (1) PSTG (11)
SS 2/C?
USER:
TS : HUMAN : (MH) AND :ENG: (LA)
PROG:
SS (2) PSTG (3)
(note: no time overflows)
  
```

SDILINE should be directly searched for ENG (LA), HUMAN(MH), etc. since it is a comparatively small file.

This use of STRINGSEARCH online is timesaving both for the user and the system. If more than 200 citations are to be subset in MEDLINE, TS should not be used since direct searching is more economical. In the above example, SS 2 would become:

USER:

1 AND HUMAN (MH) AND ENG (LA)

(note: this will result in time overflows
but will still be faster than STRING-
SEARCHing)

If a user actually has a need to TS, looking for particular words or phrases in the title or abstract, after a concept has been searched, then the use of a text word (TW) search before TS will reduce the number of citations considerably. For example, a user constructed a concept in six search statements using MeSH as the selection vehicle. At that point, the user wished to refine the search by requiring that the title field of the last subset contain the words "failure" and "thrive". The search was injudiciously completed as follows:

PROG:

SS (6) PSTG (17491)

SS 7/C?

USER:

TS : FAILURE: (TI) AND : THRIVE: (TI)

This retrieved an answer but took an inordinate amount of time to perform. (The average search takes 10 seconds; this search took 20 minutes.) The same answer would have been achieved by the following example but would have taken only 1% as much of the computer resources:

USER:

6 AND ALL FAILURE: (TW) AND ALL THRIVE: (TW)

PROG:

SS (7) PSTG (150)

SS 8/C?

USER:

TS : FAILURE: (TI) AND : THRIVE: (TI)

SS 7 would contain "failure" and "thrive" in the abstract or title fields; SS 8 restricted it to the title. Note that in the first example 17,491 citations were TS'ed - in the second example only 150 citations. Both got the same answer but the second is much less expensive in computer time.

We do recognize that there are some cases where text word searching cannot be used to further subset a concept before using TS, but every effort should be made to TS the fewest number of citations possible. This basic rule always applies to both online and offline use.

OFFSEARCH

Never STRINGSEARCH a concept to limit the result to the highly posted terms (HUMAN, ENG, ENGLISH ABSTRACT, etc.). Why? When using the PSTG option for online outputs when OFFSEARCHING MEDLINE and/or backfiles, the NLM recommends that the user be connected to the SDILINE data base whenever possible. This creates much less work for the system and fewer time overflows for the user, yet still allows "browsing". Thus, the user has no way to know whether the retrieval is below or above the 200 citation limit. Secondly, even if the user were connected to MEDLINE, one could not anticipate counts in the backfiles. Thirdly, the user might be in NPS mode and not have any idea of posting counts. For these reasons we request that you never TS in OFFSEARCH to restrict your search to highly posted terms. Instead, use the highly-posted terms directly.

The recommendations stated actually lead to a contradiction, namely: what do I do if I am in an OFFSEARCH and specify online outputs of PSTG? The user will be searching online and causing an OFFSEARCH to be run offline. In this case, the search should follow the OFFSEARCH rule and TS should not be used to restrict searches to highly posted terms.

AVOIDANCE OF STRINGSEARCH

Recently, a particular search came to my attention. A user with an intermediate search result of 23,000 citations wished to find the prefix "nephr" in either the title or the abstract field, intending to find words such as nephritis, nephraogenic, nephrosis, nephron, etc. The user had done the following:

```

PROG:
SS (1) PSTG (23000)
SS 2/C?
USER:
TS : NEPHR: (TI) OR : NEPHR: (AB)

```

This is a very expensive search (roughly the equivalent of printing 23,000 citations) which can and must be avoided. Since individual words in the title and abstract are directly searchable as text words (TW), the user should have input the following SS in the previous example:

```

PROG:
SS (1) PSTG (23000)
SS 2/C?
USER:
1 AND ALL NEPHR: (TW)

```

The first search would run several hundred times longer than this one but both retrieve the same citations. Therefore, we hope you will utilize the second example whenever possible.

USE OF STRINGSEARCH

There are cases where TS cannot be avoided. A user may wish to restrict an existing search to a stem (root) which may occur as a prefix or an imbedded concept. An example of this is "fluor" which may occur as a prefix in fluoride, fluorine, fluoridation, etc. and may occur as an imbedded stem in words starting with monofluor, difluor, polyfluor, etc. If "fluor" were being searched as an imbedded concept, then TS would have to be used. It is hoped that the user will have retrieved a small enough subset of citations such that the STRINGSEARCH will not prove to be too expensive.

RECAP OF NLM RECOMMENDATIONS

1. Use TS online to restrict a search to highly posted terms, when the subset is smaller than 200 citations (in the MEDLINE data base). Then use all the terms at once such as:

```

TS HUMAN (MH) AND ENG (LA) AND CHILD: (MH)
(note: CHILD: (MH) will retrieve CHILD
or CHILD, PRESCHOOL)

```

2. Do not use TS in the above example when in OFFSEARCH mode or when connected to SDILINE (regardless of the citation count).
3. When searching a prefix, use text words and text word truncations (# or :).

(Note: rules 1-3 apply to MEDLINE and the backfiles; rule 3 applies to all data bases, including TOXLINE.)

It is imperative that users make every effort to adhere to these searching technics to avoid system degradation and delays in the delivery of OFFSEARCHes and OFFLINE prints. NLM is investigating the imposition of an automatic limit on the duration of individual OFFSEARCHes.

resources
 a substantial number of
 connect time and NLM
 computer resources, we offer the following recommendations:

In General -

- a) Always limit retrieval as much as possible BEFORE string-searching. Examine the word or words to be stringsearched and identify items that might be retrieved as Text Words first:

SS 1 - (TW) MIDLIFE AND CRISIS

SS 2 - TS (T1) : MIDLIFE CRISIS:

or searched directly, e.g., 5 AND ENG (LA). For online postings of over 200, there is no advantage to string-searching for items that can be searched directly, such as languages or MeSH headings.

- b) Stringsearching the same retrieval set in consecutive search statements and then combining them may yield unpredictable results: it may work perfectly, it may give false results of 1 or *NONE, it may cause a RESTART (that sudden HELLO FROM ELMILL ... message you receive in the middle of your search), or it may stop OFFSEARCH processing. For example:

DO NOT

SS (3) PSTG (198)

STS SS 4/C?

USER:

TS (T1): CODEINE SULFATE: OR : CODEINE SULPHATE:

STS SS 5/C?

USER:

TS 3 (AB): CODEINE SULFATE: OR : CODEINE SULPHATE:

PRG:

SS (5) PSTG (136)

STS SS 6/C?

USER:

4 OR 5

SYSTEM EFFICIENCY

Instead, consolidate the instruction, using post-qualification:

AVOID:

-- REDUNDANT SEARCHING, ESPECIALLY REDUNDANT EXPLODES

STS SS 5/C?

-- STRINGSEARCHING WHEN A TEXT WORD (TW) SEARCH CAN GET THE

SAME ANSWER CODEINE SULFATE: OR : CODEINE SULPHATE: OR

PROG:

-- STRINGSEARCHING WITHOUT REDUCING THE SEARCH STATEMENT BY USE OF

TEXT WORDS (TW) : (AB) OR : CODEINE SULPHATE: (AB)

This way is much more reliable than using two separate

-- STRINGSEARCHING IN OFFSEARCH TO RESTRICT A SEARCH TO HIGHLY

POSTED TERMS, CHECK TAGS AND LANGUAGES SUCH AS HUMAN, ENG, string-

ENGLISH ABSTRACT, etc. WHEN OFFSEARCHING, THESE TERMS

SHOULD BE USED IN BOOLEAN SEARCHES, NOT STRINGSEARCHING

will search the title (TI) and Abstract (AB) in MEDLINE but will search the abstract twice in TOXLINE or CANCERLIT. The latter duplication may cause unpredictable results as described in b) above. Whenever you are storing or saving a stringsearch for use in dissimilar data bases (e.g., MEDLINE and TOXLINE) always specify each data element, rather than relying on defaults:

SS 6 - TS (TI) :3-DAY: OR :3-DAY: (AB)

2. In a Storage (OFFSEARCH, STORESEARCH, SAVESEARCH) Mode -

NEVER use stringsearch for items that may be searched directly, such as ENG (LA), EVEN if you are in the PSTG option and there are fewer than 200 citations to stringsearch online. An excellent rule of thumb is that if there is a choice between searching directly or stringsearching, direct searching is more efficient.

EFFICIENT STRINGSEARCHING

MANUAL

4.5.3.3

Stringsearching consumes more processing time and computer resources than any other search operation, and causes a substantial number of OFFSEARCH purges. To help conserve users' connect time and NLM computer resources, we offer the following recommendations:

1. In General -

- a) Always limit retrieval as much as possible BEFORE stringsearching. Examine the word or words to be stringsearched and identify items that might be retrieved as Text Words first:

SS 1 - (TW) MIDLIFE AND CRISIS

SS 2 - TS (TI) : MIDLIFE CRISIS:

or searched directly, e.g., 5 AND ENG (LA). For online postings of over 200, there is no advantage to stringsearching for items that can be searched directly, such as languages or MeSH headings.

- b) Stringsearching the same retrieval set in consecutive search statements and then combining them may yield unpredictable results: it may work perfectly, it may give false results of 1 or *NONE, it may cause a RESTART (that sudden HELLO FROM ELHILL ... message you receive in the middle of your search), or it may stop OFFSEARCH processing. For example:

DO NOT

SS (3) PSTG (198)

STS SS 4/C?

USER:

TS (TI): CODEINE SULFATE: OR : CODEINE SULPHATE:

(after time-slicing)

PROG:

SS (4) PSTG (95)

STS SS 5/C?

USER:

TS 3 (AB): CODEINE SULFATE: OR : CODEINE SULPHATE:

PROG:

SS (5) PSTG (135)

STS SS 6/C?

USER:

4 OR 5

SENTENCESEARCHING

Instead, consolidate the instruction, using post-qualification:

SS (4) PSTG (198)

STS SS 5/C?

USER:

TS (TI) : CODEINE SULFATE: OR : CODEINE SULPHATE: OR

PROG:

CONT 5-

USER:

: CODEINE SULFATE: (AB) OR : CODEINE SULPHATE: (AB)

This way is much more reliable than using two separate search statements.

- c) Remember that different data bases have different string-search defaults, so that entering

SS 6 - TS :3-DAY OR :3-DAY: (AB)

will search the Title (TI) and Abstract (AB) in MEDLINE but will search the abstract twice in TOXLINE or CANCERLIT. The latter duplication may cause unpredictable results as described in b) above. Whenever you are storing or saving a stringsearch for use in dissimilar data bases (e.g., MEDLINE and TOXLINE) always specify each data element, rather than relying on defaults:

SS 6 - TS (TI) :3-DAY: OR :3-DAY: (AB)

USER:

2. In a Storage (OFFSEARCH, STORESEARCH, SAVESEARCH) Mode -

NEVER use stringsearch for items that may be searched directly, such as ENG (LA), EVEN if you are in the PSTG option and there are fewer than 200 citations to stringsearch online. An excellent rule of thumb is that if there is a choice between searching directly or stringsearching, direct searching is more efficient.

(TW) HEART AND LUNG AND PREPAR:

PRT 1 AB

- AB - The development of effective drugs for chronic LUNG disease, especially bronchodilator aerosols, has been a boon to patients and physicians alike, but these agents also may provoke arrhythmias. Fluorocarbon propellants, once regarded as harmless are now known to disrupt cardiac function, sensitizing the HEART to the arrhythmic effects of sympathomimetic amines. Catecholamine drugs as a group have a strong impact on heart rate and contractility. But the danger of rhythm disturbance often can be reduced by cutting the dosage or choosing a PREPARATION with more Beta 2 activity. Methylxanthines, generally safer than catecholamines, nevertheless must be used with caution and preferably alone in patients with heart and lung disease.

Below is the result after SENSEARCHING

- AU - Fischer KJ
 TI - [Myocardial contractility during limited haemodilution (author's trans)]
- AB - The direct cardiac effects of limited isovolaemic haemodilution by low molecular dextran was investigated in the cat HEART-LUNG PREPARATION. This type of preparation does not allow evaluation of the significance of nervous or humoral influences. All haemodynamic and contractile parameters remain unchanged as does myocardial adaptability to acute changes in pressure or volume load. However, cardiac function curves and the estimation of contractility by means of force-velocity-relations reveal a slight increase of the inotropic state.
- SO - Anaesthetist 25(4):143-9, Apr 76
- AU - Szinolenszky T ; Hamm agyi Gy ; R"oth E ; T"aor"ok B
 TI - Autoperfused multi-organ preparations. II. Microcirculation in the autoperfused organs.
- AB - The microcirculation of 46 autoperfused HEART-LUNG -liver-duodenum-pancreas-kidney PREPARATIONS has been studied and the acid-base conditions were determined. The stability of the autoperfused organ preparation was not ensured by the "multi-organ" arrangement, moreover the combination had a detrimental effect, with reduced tissue perfusion leading to hypoxia and acidosis. This general vasomotor breakdown represented a therapeutic drug resistance, so that the organ preparation failed to solve the problem of temporary organ

STRINGSEARCH/SENTENCESEARCH

EXERCISES

Find articles in MEDLARS on the following topics. Use MeSH or text word search capabilities which are most efficient and appropriate. Use string-search as indicated.

1. Using your retrieval from a search on Paget's disease (text word search), stringsearch for articles in English or German. 158
2. Using the original retrieval on Paget's disease, stringsearch for articles that were published in 1981.
3. Articles on PL 93-641.
4. Hepatic infusion. Limit to human and females. 85

CHEMLINE

OBJECTIVES

Trainees will be able to:

1. describe the scope and content of the database and the means by which it is created
2. identify the information contained in each field and write the correct entry format
3. retrieve unit records for compounds, given any of the following:
 - a. registry number
 - b. systematic chemical name
 - c. common name
 - d. molecular formula
4. discuss CHEMLINE's relationship to other NLM databases and use of CHEMLINE information in them.
5. Discussion of sample CHEMLINE searches and CHEMLINE/TOXLINE searches.
6. Calculating molecular formula and brief overview of other capabilities of CHEMLINE, i.e., structural search terms:
 - a. formula fragments
 - b. ring analysis

REPRESENTATIONS OF A CHEMICAL
CHEMLINEMANUAL

Definition:

13.1

- CHEMLINE is an online Chemical dictionary/
thesaurus database.
- contains information on over 500,000 unique
chemical compounds.
- not a citation file; no bibliographic references

Purpose:

- to assist in searching free text databases
(notably TOXLINE) for chemical compounds
required in a search (provides other names
(synonyms) for chemical compound of interest
and registry numbers which can be used in
search)
- also allows for location of generic classes of
chemical compounds.

Initial Class Focus: THIAZOL-3(2H)-ONE, 1,1-DIOXIDE

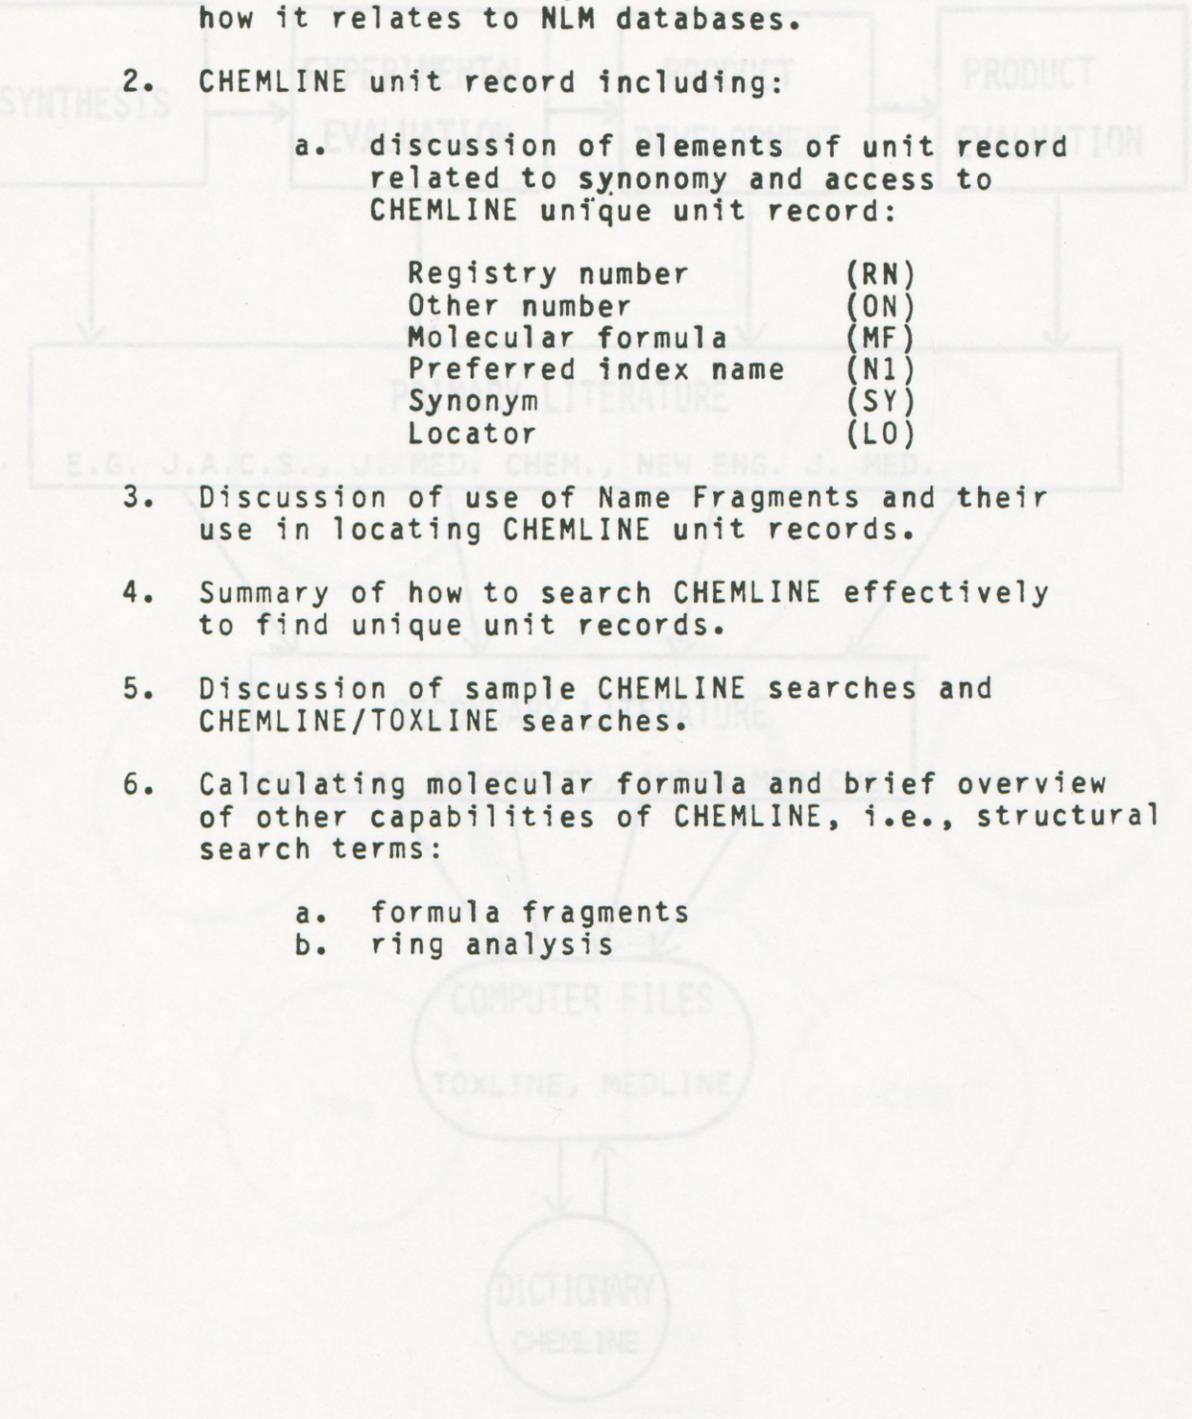

- on use of CHEMLINE to obtain synonyms and CAS
registry numbers for free text searching.

INFORMATION LIFETIME OF A CHEMICAL

Order of lecture:

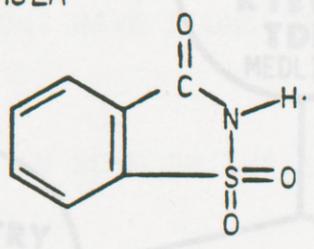

1. Chemical literature, creation of CHEMLINE and how it relates to NLM databases.
2. CHEMLINE unit record including:
 - a. discussion of elements of unit record related to synonymy and access to CHEMLINE unique unit record:

Registry number	(RN)
Other number	(ON)
Molecular formula	(MF)
Preferred index name	(N1)
Synonym	(SY)
Locator	(LO)
3. Discussion of use of Name Fragments and their use in locating CHEMLINE unit records.
4. Summary of how to search CHEMLINE effectively to find unique unit records.
5. Discussion of sample CHEMLINE searches and CHEMLINE/TOXLINE searches.
6. Calculating molecular formula and brief overview of other capabilities of CHEMLINE, i.e., structural search terms:
 - a. formula fragments
 - b. ring analysis

MOLECULAR FORMULA (MF)

MANUAL
MANUAL

CHEMICAL ABSTRACT SERVICE (CAS)
REGISTRY NUMBER (RN)

13.4.3

Description

Description

13.4.1

--Unique number, up to 9 digits, assigned by CAS to a single chemical substance

--searched and displayed without leading zeros

--hyphenated format

HILL CONVENTION

1. Organic Compounds (compounds containing carbon)

- a. C (carbon) - listed first with count
- b. H (hydrogen) - listed second with count
- c. all other elements in alphabetical order (elemental symbols, e.g., C for carbon obtained from periodic chart)

2. Inorganic compounds (compounds without carbon)

- a. listed in alphabetical order

Counts made explicit; counts of 1 are implicit

e.g., C7-H5-N-03-S.Na

DOT DISCONNECT

- 1. For salts, mixtures and molecular addition compounds, molecular formulas of the components are presented individually and separated by a dot; one with highest carbon count first.

MANUAL

OTHER CAS REGISTRY NUMBER (ON)

Description

13.4.2

- superseded CAS registry numbers (RN in record is current CAS registry number)
- same format as RN
- searched the same as RN in CHEMLINE; no qualifier necessary
- retrieves same unique unit record as RN
- listed in CHEMLINE record followed by CAS in parentheses (CAS)
- if ON valid in the NLM databases, TOXLINE, TOXBACK74, TOXBACK65, MEDLINE, RTECS, TDB the ON number is repeated with valid database listed behind number in parentheses, e.g.:

ON - 58667-68-8 (CAS)

ON - 58667-68-8 (TOXBACK74)

- if ON not valid in NLM databases, the ON number is NOT repeated

e.g.

ON - 1360-61-8 (CAS)

ON - 11016-42-5 (CAS)

ON - 1360-61-8 (TOXLINE) (TOXBACK65) (TOXBACK74)

MANUAL

MOLECULAR FORMULA (MF)

SYNONYMS (SY)

Description

13.4.3

--is a summary of the elemental composition of a chemical substance in terms of the numbers and kinds of atoms

13.4.6

--not unique

--format, Hill Convention, dot disconnect, hyphenated

HILL CONVENTION

- 1. Organic Compounds (compounds containing carbon)
 - a. C (carbon) - listed first with count
 - b. H (hydrogen) - listed second with count
 - c. all other elements in alphabetical order (elemental symbols, e.g., C for carbon obtained from periodic chart)
- 2. Inorganic compounds (compounds without carbon)
 - a. listed in alphabetical order

Counts made explicit; counts of 1 are implicit

e.g., C7-H5-N-03-S.Na

DOT DISCONNECT

- 1. For salts, mixtures and molecular addition compounds, molecular formulas of the components are presented individually and separated by a dot; one with highest carbon count first.

NI AND SY SEARCH RECORDS

MANUAL

LOCATOR (LO)

Description

13.4.17

--name of database/file where information on chemical may be found

--shows presence of RN (not names) in databases/files listed

--possible locators:

- TOXLINE
- TOXBACK65
- TOXBACK74
- RTECS
- TDB
- MEDLINE
- TSCAINV (file not present at NLM)

--TSCAINV indicates chemical present on EPA Toxic Substances Control Act Inventory

--additional files may be carried in future

--searchable LO field generated from File Names in ON Field and in printable LO Field

LOCATOR EXAMPLES

N1 AND SY SEARCH RECORDS

MANUAL

- Up to 39 characters of the N1 and SY printable fields are used to create searchable N1,SY records
-thus multiword names can be searched directly

13.4.7

--fragments generated from names in N1 and SY fields according to specific rules

--similar in use to text words but differs in important

- The following qualifying data are not kept in the searchable N1 and SY fields, but are retained in the Name Fragment (NF) Field.

RULES:

- (8CI) or (9CI) 8th or 9th Collective Index Name
- (VAN) Valid Ambiguous Name
- [XXXXX] Anything in square brackets

- Homograph Definitions
- Line Formulas

2. when special characters (i.e., hyphens, colons, parentheses, brackets, commas, periods and other punctuation marks), are preceded or followed by a blank (or space), convert these special characters to blanks and create NF.
3. trailing single quotes are always kept as part of search term
4. all uniquely occurring name fragments are kept; no stopword list
5. no fragment is kept more than once for any unit record

EXAMPLES OF N1 AND SY SEARCH RECORDSEXAMPLES OF NAME FRAGMENTSPRINT RECORD

SY - Vinyl Chloride

SY - Acetonitrile (8CI)

SY - Tris (VAN)

SY - Tris [Buffering Agent]

N1 - Phenol,

4-(5-(4-methyl-1-piperazinyl)(2,5'-bi-1H-benzimidazol)-
2'-yl)-, trihydrochloride (9CI)CORRESPONDING SEARCH RECORDS (as seen during a NBR)

1	BENZIMIDAZOL	

SEARCHING CHEMLINE

MANUAL

NAME FRAGMENTS (NF)

Description

13.4.7

--fragments generated from names in N1 and SY fields according to specific rules

--similar in use to text words but differs in important ways, e.g., all parts of name kept, including numbers

--searchable, non-printable field

RULES:

1. break on (i.e., use as term delimiter):
 - hyphens
 - colons
 - enclosures (e.g., parentheses, brackets)
 - blanks
2. when special characters, e.g., commas, periods and other non-alphanumerics, are preceded or followed by a blank (or space), convert these special characters to blanks and create NF.
3. trailing single quotes are always kept as part of search term
4. all uniquely occurring name fragments are kept; no stopword list
5. no fragment is kept more than once for any unit record

If more than one posting received (NF not unique) PRT N1 or SY to determine correct record

HELLO FROM ELSHILL AT NL SEARCHING CHEMLINE
YOU ARE NOW CONNECTED TO THE CHEMLINE FILE.
SUMMARY

GIVEN CHEMICAL NAME

1. NBR name (enter name as is with multiple terms, hyphens, etc.)
2. If name present as SY or N1, search using appropriate qualifier
3. If cannot locate, or name has greater than 39 characters, use Name Fragments (remember to post-qualify single numbers with NF)
4. PRT DL
 - 1 CHARINIDE (KF)
 - 1 SACCHARINIDE (SY)
 - 12 SACCHARIN (KF)
 - 1 SACCHARIN (SY)
 - 1 SACCHARIN ACID (SY)

GIVEN REGISTRY NUMBER (RN)

1. Enter number in hyphenated format with no leading zeros
2. PRT DL

GIVEN MOLECULAR FORMULA (MF)

1. Enter formula in Hill Convention, hyphenated format
2. Use dot disconnect for salts, mixtures or molecular addition compounds
3. If more than one posting received (MF not unique) PRT N1 or SY to determine correct record
4. PRT correct record DL

TOXLINE

1. FILE INFORMATION

WHAT IS TOXLINE ?

1. TOXLINE

- a. online at NLM
- b. contains _____ records
- c. updated monthly (3rd weekend) with approx. 13,000 records
- d. 1979 - present (with exceptions)
- e. regenerated April 1982

WHAT DO YOU NEED TO KNOW BEFORE SEARCHING TOXLINE?

SCOPE

EASE

2. TOXBACK65, TOXBACK74

Only search

a. TOXBACK65

COST

- 1. pre-1965-1973
- 2. 387,377 records
- 3. duplicates eliminated
- 4. available through OFFSEARCH at NLM

COVERAGE TODAY WILL BE:

BACKGROUND

b. TOXBACK74

SCOPE

- 1. 1974-1978 FILE INFORMATION
 - 2. 474,653 UNIT RECORD EXPLANATION
 - 3. duplicate SUBFILE COMPOSITION
 - 4. available SUBFILE SUMMARY
- SEARCH STRATEGY

I. BACKGROUND

1. Toxicology Information Program

- a. Purpose is to provide computer based toxicology data banks from:
 1. scientific literature
 2. collaborating industrial, academic, & governmental agencies
- b. TOXLINE is one such data base
 1. assembled at NLM
 2. bibliographic
 3. accessible at NLM only

4. Cost

- a. secondary sources hold copyrights on their information, thus we pay royalties; costs can change
- c. Specialized Information Services at NLM manages the toxicology data bases.

II. SCOPE

1. Very general; interpreted broadly
2. Human and animal toxicity studies
3. Areas covered:
 - a. environmental chemicals & pollution
 - b. occupational safety & health
 - c. pharmacology
 - d. toxicity
 - e. adverse drug effects
 - f. poisoning agents
4. If in Medline searching one is using the subheadings AE (adverse effects), PD (poisoning) or TO (toxicity) with chemicals -- think about doing a TOXLINE search.

only NLM { Chemline -
 Toxline -
 RTECS NIOSH
 Toxicology Data Bank - EPA

III. FILE INFORMATION

1. TOXLINE

- a. online at NLM
- b. contains _____ records
- c. updated monthly (3rd weekend) with approx. 13,000 records
- d. 1979 - present (with exceptions)
- e. regenerated April 1982
- f. average growth is 140,000 records/year

2. Abstract (AB)

2. TOXBACK65, TOXBACK74

by
Only offsearch

a. TOXBACK65

1. pre 1965-1973
2. 387,377 records
3. duplicates eliminated
4. available through OFFSEARCH at NLM

b. TOXBACK74

1. 1974-1978
2. 474,653 records
3. duplicates eliminated
4. available online at NLM

AB - IPA COPYRIGHT; ASHP TWENTY GERIATRIC PATIENTS WERE GIVEN EITHER CLOMACRAN (I) 25 TO 150 MG/D ORALLY FOR 12 WEEKS OR THIORIDAZINE (II) 25 TO 150 MG/D ORALLY FOR THE TREATMENT OF THEIR ORGANIC BRAIN SYNDROME. PATIENTS WHO

3.3. Overview

- a. bibliographic file
- b. citations usually have abstracts and CAS Registry Numbers
- c. file is made by merging information from secondary sources and special collections into one data base
- d. file is maintained here at NLM but created elsewhere, except for the portion that comes from MEDLINE
- e. the secondary sources are responsible for the content
 - 1. each secondary source indexes published articles
 - 2. consequently duplicates get into the file
- f. search strategy can include all subfiles, access specific subfiles, or exclude specific subfiles

- b. somewhat standard format
- c. variable format of first name/initials
- d. NBR (Neighbor) to find correct form

HAYES M

HAYES MJ

4. Cost

- a. secondary sources hold copyrights on their information, thus we pay royalties; costs can change
 - \$52 prime time
 - \$45 non prime time
 - \$ 0.35 per page offline print

5. Award Type (AW)

MANUAL 12.5.4

- a. only in one subfile - BPROJ
 - A = Intramural
 - C = Contract
 - F = Fellowship
 - G = Grant
- b. searchable

6. Classification Code (CC)

MANUAL 12.5.5

- a. only in one subfile - CBAC
- b. designates Chemical Abstracts Service section/subsection
- c. searchable
- d. example
 - CC - CA/101003

IV. UNIT RECORD EXPLANATION

MANUAL 12.5.6

1. Summary

- a. variable formats
- b. all records do not contain all data elements
- c. search and print status of elements vary
- d. recommend using qualifiers when searching

2. TOXLINE uses only the 5 alphanumeric characters
3. originally from American Society for Testing Materials

d. searchable

2. Abstract (AB)

MANUAL 12.5.1

- a. in all subfiles; not all records have abstracts
- b. format varies:
 - narrative
 - keywords
 - notation (Journal of the American Medical Association)
 - blank - copyright material

5. Corporate Name (CN)

MANUAL 12.5.7

- a. only in one subfile - CBAC
- b. designates corporate name when no personal name available
- c. search status
 1. textword - either use or not use qualifier
 2. stringsearch - when no qualifier is used, default searches abstract field
- d. example

9. Country (CY)

MANUAL 12.5.8

- a. only in two subfiles - RPROJ, CBAC
- b. AB - IPA COPYRIGHT; ASHP TWENTY GERIATRIC PATIENTS WERE PUBLISHED
- c. search
 - GIVEN EITHER CLOMACRAN (I) 25 TO 150 MG/D ORALLY FOR 12 WEEKS OR THIORIDAZINE (II) 25 TO 150 MG/D ORALLY FOR THE TREATMENT OF THEIR ORGANIC BRAIN SYNDROME. PATIENTS WHO

10. Datatags (DTS)

MANUAL 12.5.9

- a. only in one subfile - CBAC
- b. used from November 1976 to July 1980
- c. indicates information is available in the article
- d. search using fulltag nomenclature
 - blood concentrations
 - chronic toxic dose
 - hematology
 - lethal concentrations
 - lethal dosage
 - maximum permissible limit (spell as shown)
 - teratogenic dose
 - threshold limit value
 - urine concentration

3. Address (AD) MANUAL 12.5.2
- a. not in all records
 - b. address of usually one author
 - c. not searchable
 - d. example
AD - MED. CENT., WEST VIRGINIA UNIV., MORGANTOWN
4. Author (AU) MANUAL 12.5.3
- a. in all records
 - b. somewhat standard format
 - c. variable format of first name/initials
 - d. NBR (Neighbor) to find correct form
HAYES W
HAYES WJ
HAYES WJJR
 - e. searchable without qualifier
5. Award Type (AW) MANUAL 12.5.4
- a. only in one subfile - RPROJ
A = Intramural
C = Contract
F = Fellowship
G = Grant
 - b. searchable
6. Classification Code (CC) MANUAL 12.5.5
- a. only in one subfile - CBAC
 - b. designates Chemical Abstracts Service section/subsection
 - c. searchable
 - d. example
CC - CA/101003

7. Coden (CD) MANUAL 12.5.6
- in 7 subfiles
 - designates the journal found in the source field
 - from the INTERNATIONAL CODEN DICTIONARY from Chemical Abstracts Service
 1. 6 digits: 5 alphanumeric characters + 1 check tag
 2. TOXLINE uses only the 5 alphanumeric characters
 3. originally from American Society for Testing Materials
 - searchable
 - look up in SERLINE
 - subfile from MEDLINE uses JTC (Journal Title Code); this is translated, however some cannot be translated.
 - example
CD - JAMAA (Journal of the American Medical Association)
8. Corporate Name (CN) MANUAL 12.5.7
- only in one subfile - CBAC
 - designates corporate name when no personal author name available
 - both directly searchable & Text Word searchable
 - example
CN - United States Environmental Protection Agency
9. Country (CY) MANUAL 12.5.8
- only in two subfiles - RPROJ, CBAC
 - state/country where research is performed or article published
 - searchable
10. Datatags (DTG) MANUAL 12.5.9
- only in one subfile - CBAC
 - used from November 1976 to July 1980
 - indicates information is available in the article
 - search using full tag nomenclature
 - blood concentrations
 - chronic toxic dose
 - hematology
 - lethal concentrations
 - lethal dosage
 - maximum permissible limit (spell as shown)
 - teratogenic dose
 - threshold limit value
 - urine concentration

11. Entry Month (EM) MANUAL 12.5.10
- a. in all records
 - b. 4 digits - format YYYY
 - c. searchable & rangeable
 - d. use for SDI's
12. Identification Number (ID) MANUAL 12.5.11
- a. only in 2 subfiles - RPROJ & TD3
 - b. identification of agency which funds this project
 - c. can contain one or more ID numbers
 - d. searchable only when entire ID is known; otherwise it is STRINGSEARCHed
 - e. example
 - ID - R01 CA 08800-14 (RPROJ)
 - ID - CONTRACT F33615-76-C-5005, PROJ. 6302, TASK 01 (TD3)
13. International Standard Serial Number (IS) MANUAL 12.5.12
- a. only in two subfiles - TOXBIB, CBAC
 - b. 8 digit numeric field xxxx-xxxx
 - c. format is XXXXXX-XX-X, leading zeros suppressed
 - d. use entire RN including hyphens to search
 - e. should 'OR' trade names and other synonyms to get maximum retrieval
 - f. use CHEMLINE to get RN
20. Supporting Agency (SA) MANUAL 12.5.19
- a. in 2 subfiles - RPROJ & TD3
 - b. formal name & address of agency supporting research project
 - c. TD3 subfile may contain several entries
 - d. not searchable, but can be STRINGSEARCHed
 - e. support dollars given if available
 - f. example
 - SA - U.S. Dept. of Health & Human Services; Public Health Service; National Inst. of Health; Division of Research Resources SUPPORT 431.638

14. Keywords (KW)

MANUAL 12.5.13

- a. in 5 subfiles
- b. indexing terms used by secondary source to classify the citations; they are unique to each secondary source
- c. first 39 characters are searchable
- d. must use the qualifier to search this field
- e. multi term field
- f. terms are textextracted into single words which are searchable as Text Words
- g. suggest using truncation to search Keyword field
- h. example

(TOXBIB)	Contraceptives, oral, *ADVERSE EFFECTS
(ASHP)	Contraceptives, oral toxicity
(EMIC)	Contraceptives
(ETIC)	Contraceptives, oral
(TD3)	Oral contraceptives

15. Language (LA)

MANUAL 12.5.14

- a. in 7 subfiles
- b. not a standard format among the subfiles
- c. always NBR (neighbor)
- d. ENG is not on all english citations
- e. example

LA - FRE;ENGLISH & ENG SUMM

16. Order Number (OD)

MANUAL 12.5.15

- a. only in one subfile - TD3
- b. identifies the document order number
- c. not searchable, but printable

23. Title (TI) MANUAL 12.5.22
 a. in all records
 b. not directly searchable, STRINGSEARCH
18. Price (PR) MANUAL 12.5.16
 a. only in one subfile - TD3
 b. gives price of document in coded format - 3 digits
 c. order form contains code translation
 d. example
 PR - NTIS PRICES: PC A06/MF A01
24. Text Words (TW) MANUAL 12.7.1
 a. all records
 b. from ABSTRACT, KEYWORD & TITLE
17. Publication Type (PT) MANUAL 12.5.17
 a. only in one subfile - CBAC
 b. designates standard type of publication string
 1 MONOGRAPH
 2 JOURNAL ARTICLE
 3 PATENT
 4 THESIS
 5 TECHNICAL REPORT
 c. characters converted to blanks
 d. search rule
 e. keyword list
 f. primary to search TOXLINE
 g. not
19. CAS Registry Number (RN) MANUAL 12.5.18
 a. in about 75% of the records
 b. unique number associated with a chemical substance
 c. format is XXXXXX-XX-X, leading zeros suppressed
 d. use entire RN including hyphens to search
 e. should 'OR' trade names and other synonyms to get maximum retrieval
 f. use CHEMLINE to get RN
20. Supporting Agency (SA) MANUAL 12.5.19
 a. in 2 subfiles - RPROJ & TD3
 b. formal name & address of agency supporting research project
 c. TD3 subfile may contain several entries
 d. not searchable, but can be STRINGSEARCHed
 e. support dollars given if available
 f. example
 SA - U.S.Dept. of Health & Human Services; Public Health Service; National Inst. of Health; Division of Research Resources SUPPORT \$31,658

21. Secondary Source (SI)

MANUAL 12.5.20

- a. on all records
- b. used as file accession number
- c. format is HEEP/75/10645
- d. STRINGSEARCH only

subfile	2 or 3	4-7 digits accession
3-6 digits	digits	number in secondary
	yr or vol	source

26. Final Year (Y2)

MANUAL 12.5.24

- a. in one subfile - RPROJ
- b. data project's authorization expires
- c. useful to notify MMS or Toxicology Information Program about a questionable citation; useful to find a specific citation for more detailed print
- d. abbreviations for some subfiles differ from Textword which comes from header in abstract field

SI acronym	TW acronym
------------	------------

27. Year (YR)

MANUAL 12.5.25

- a. in all records
- b. reflects the source
- c. searchable & ranges as follows

CA	CBAC
SSIE	RPROJ
NTIS	TD3
IPA	IPA or ASHP

28. Zip Code (ZP)

MANUAL 12.5.26

- a. in two subfiles - RPROJ, CBAC
- b. searchable

22. Source (SO)

MANUAL 12.5.21

- a. in all records
- b. contains bibliographic citation
- c. not a standard format *controlled by vendors*
- d. not searchable
- e. CODEN and YEAR fields reflect the SOURCE
- f. example

SO - ENVIRON HEALTH PERSPECT: 28:51-57,1979

23. Title (TI) MANUAL 12.5.22

1.
 - a. in all records
 - b. not directly searchable, STRINGSEARCH
 - c. textextracted
 - d. foreign titles are identified

24. Text Words (TW) - *Main* - MANUAL 12.7.1

- a. all records
- b. from ABSTRACT, KEYWORD & TITLE
- c. uniterm
- d. term generation rules & stopword list
 1. alpha or alphanumeric 39 character string
 2. special characters converted to blanks
 3. hyphen exception rule
 4. stopword list
- e. primary means to search TOXLINE
- f. not a data element

2,3,5-T

V. SUBFILE COMPOSITION

- 1. Five major secondary sources
 - Chemical Abstracts Service
 - Environmental Protection Agency
 - American Society of Hospital Pharmacists
 - BioSciences Information Service
- 2. Six special collections
 - Environmental Mutagen Information Center
 - Environmental Teratology Information Center
 - Smithsonian Science Information Exchange
 - National Technical Information Services
 - Hayes File on Pesticides
 - Toxic Materials Information Center

SUBFILES OF TOXLINE, TOXBAC74, AND TOXBAC65

Subfile abbreviation	Subfile Name	Source of Subfile	Years of Coverage		Comment
			TOXLINE	TOX74 TOX65	
TOXBIB	Toxicity Bibliography	NLM MEDLINE	79 →	74-78 65-73	Created by profile run against MEDLINE to retrieve toxicology related records
CBAC	Chemical Biological Activities	Chemical Abstracts	79 →	74-78 65-73	CBAC sections; includes sections 8 Radiochemistry, 59 air pollution 60 sewage and wastes since 1975.
PESTAB (HAPAB)*	Pesticides Abstracts (Health aspects of Pesticides Abstracts Bulletin)*	EPA Environmental Protection Agency	79-81	74-78 68-63	Scope is epidemiological effects of pesticides in humans. Name was changed in 1974.
IPA	International Pharmaceutical Abstracts	American Society for Hospital Pharmacists	79 →	74-78 69-73	Scope includes pharmacology, toxicology of drugs
HEEP	Abstracts in Health Effects of Environmental Pollutants	BioSciences Information Service	79 →	74-78 70-73	Includes both Biological Abstracts and Biological Abstracts/RRM profile.
EMIC	Environmental Mutagen Information Center File	Special file under NTP	50 →		Many secondary sources used to collect mutagen related information.
ETIC	Environmental Teratology Information Center File	Special file under NTP	50 →		Many secondary sources used to collect teratology information.
RPROJ	Toxicology/Epidemiology Research Projects	Smithsonian Science Information Exchange	79 →		Profile used to group reports of research projects in process in toxicology and epidemiology
HAYES	W.J. Hayes, Jr. file on health aspects of pesticides	Special File		40-68	10,000 citations-no abstracts or registry numbers.
TMIC	Toxic Materials Information Center file	Special file		40-73	Closed file--prepared at Oak Ridge National Laboratory

2. CBAC MANUAL 12.6.2
 a. Chemical Abstracts Service: Chemical-Biological
 1. The primary date of publication coverage for the various subfiles for TOXLINE and both backfiles are:

<u>SUBFILE</u>	<u>TOXLINE</u>	<u>TOXBACK74</u>	<u>TOXBACK65</u>
TOXBIB	79-present	74-78	65-73

VI. SUBFILES

1. TOXBIB

- a. National Library of Medicine: Toxicity Bibliography
(printed form until 1977)
- b. Two sections of information:

1. Drugs and Chemicals

Adverse effects -- what happens when a drug or chemical
development & use used under normal conditions gives a
adverse drug re bad reaction
toxicity

Poisoning -- used very discretely; the drug or
drug analysis chemical is a poisoning agent or
drug metabolism causes poisoning

Toxicity -- used with chemicals and drugs to
determine the experimental effects
upon man or animals

Individual MESH terms that imply both toxicity and the
agent (i.e. lead poisoning)

5. HEEP

2. Adverse reactions to drugs and chemicals

- a. Chemically induced -- used with diseases, syndromes,
congenital abnormalities and
symptoms caused by chemical
compounds
- b. Effects of environment other than medicinals

Individual MESH terms that do not carry the subheading
agent (i.e. morphine addiction)

Profile is run against the SDILINE each month

<u>SUBFILE</u>	<u>TOXLINE</u>	<u>TOXBACK74</u>	<u>TOXBACK65</u>

4. IPA

MANUAL 12.6.4

- a. American Society of Hospital Pharmacists:
International Pharmaceutical Abstracts (IPA).
- b. Publication
- c. Review 1000+ journals
- d. Use ASHP to identify complete subfile
- e. Types of information in subfile:
 - development & use of drugs
 - adverse drug reactions
 - toxicity
 - drug stability
 - drug analysis
 - drug metabolism
- f.

<u>SUBFILE</u>	<u>TOXLINE</u>	<u>TOXBACK74</u>	<u>TOXBACK65</u>
IPA	79-present	74-78	69-73

5. HEEP

MANUAL 12.6.5

- a. BioSciences Information Service: Abstracts on Health Effects of Environmental Pollutants (HEEP).
- b. Publication
- c. Effects of environmental chemicals or substances, other than medicinals on human health
- d. Types of information in the subfile:
 - industrial medicine
 - occupational health
 - analytic methods
 - reports on vertebrates & invertebrates as indicators of toxic substances or disease vectors in food chain
- e. Biological Abstracts (Research Reports) and Biological Abstracts/Reports, Reviews, Mgt literature
- f.

<u>SUBFILE</u>	<u>TOXLINE</u>	<u>TOXBACK74</u>	<u>TOXBACK65</u>

10. HAYES

MANUAL 12.6.11

- a. Hayes File on Pesticides
- b. Closed files; compiled by Dr. W.J. Hayes
- c. Provides earlier years of HAPAB 1940-1966;

d. <u>SUBFILE</u>	<u>TOXLINE</u>	<u>TOXBACK74</u>	<u>TOXBACK65</u>
HAYES	---	---	40-68

11. TMIC

MANUAL 12.6.10

- a. Toxic Materials Information Center (TMIC) file, Oak Ridge National Laboratory
- b. File was built from 1971-1975, however references prior to this time period are included
- c. SUBFILE

<u>TOXLINE</u>	<u>TOXBACK74</u>	<u>TOXBACK65</u>
TMIC	---	40-73

2. Ranging

a. Ranging on publication Year (YR) and Entry Month (EM) *qualify*

b. Qualifier required for ranging on E

c. Formats:

FROM -- TO -- inclusive

LESS THAN -- exclusive

GREATER THAN -- exclusive

VII. SUBFILE SUMMARY

1. Total of 11 subfiles; 9 in TOXLINE
 - a. Ascending (0-9, A-Z) is assumed; otherwise include
2. Each subfile has its own acronym
 - a. present in the record as a keyword or as a header in the abstract field from where it is textextracted
 - b. textword searchable
 - c. can 'AND' or 'AND NOT' in search strategy
3. Disadvantages of a merged data base
 - a. variable record format
 - b. variable data elements
 - c. duplicate citations
4. Duplication Problem
 - a. pay each secondary source for information received
 - b. citations get into file at different times
 - c. source field format not standardized
 - d. completeness of record varies
5. Duplicate checking
 - a. general problem of when to do it
 - b. whose citation to keep
 - c. TOXBACK65, TOXBACK74 have had duplicates removed
 - d. TOXLINE thru 1981 have had duplicates removed

CD - Coden
 YR - Year

6. Delineate the parameters of the search such as:
 - a. years covered
 - b. species
 - c. clinical and/or nonclinical
 - d. published articles / research projects

7. Develop chemical concept
 - a. use CHEMLINE for QN, synonyms, locator
 - b. chemical name fragments
 - c. may not need to narrow search further

8. Develop concept
 - a. use NESH to suggest terms
 - b. various spellings
 - c. various synonyms
 - d. special terminology

9. Choose files to be searched
10. Develop print format and/or sort format
11. Application

VIII. SEARCH STRATEGY

1. Comparison of MEDLINE and TOXLINE

	MEDLINE	TOXLINE
STD RECORD FORMAT	YES	NO
DUPLICATES	NO	YES
CONTROLLED VOCABULARY	YES	NO
TREE STRUCTURE	YES	NO
BOOLEAN LOGIC	YES	YES
SENTENCE SEARCH	YES	NO
STRINGSEARCH	YES	YES
EXPLODE	YES	NO
SUBHEADINGS APPLY	YES	NO
CHECKTAGS	YES	NO
SORT	YES	YES
RANGING	YES	YES

2. Ranging

a. Ranging on publication Year (YR) and Entry Month (EM) ^{3 characters} MANUAL 12.7.10 *qualify*

b. Qualifier required for ranging on EM ^{4 characters}

c. Formats:

- FROM -- TO -- inclusive
- LESS THAN -- exclusive
- GREATER THAN -- exclusive

3. Sorting

- a. Functions as a prespecified keyword rather than a command.
- b. Selects data element to be sorted and direction of sort.
 - a. Ascending (0-9, A-Z) is assumed; otherwise include the word in the SORT statement.
 SORT=AUTI, DESCENDING, *D, DESC*
- c. User initiates sort during question & answer portion of an OFFSEARCH or offline PRINT command.

User prompt:

PROG:
SEARCH TITLE, OR NONE-

USER:
SORT=AUTI

- d. System never prompts for SORT; enter in response to REQUESTOR'S NAME, OR SAME-
SEARCH TITLE, OR NONE-
- e. Five data elements may be listed for sorting.
- f. Caution on SORTing in TOXLINE:
Data elements with variable formats
Data elements that occur several times
- g. Useful data elements to sort in toxline

AU - Author
TI - Title
SI - Secondary Source
CD - Coden
YR - Year

*ordinarily w commas
but auto*

4. Delineate the parameters of the search such as:
years covered
species
clinical and/or nonclinical
published articles /research projects
5. Develop chemical concept
 - a. use CHEMLINE for RN, synonyms, locator
 - b. chemical name fragments
 - c. may not need to narrow search further
6. Develop concept
 - a. use MESH to suggest terms
 - b. various spellings
 - c. various synonyms
 - d. special terminology
7. Choose files to be searched
8. Develop print format and/or sort format
9. Application

In CHEMLINE, find the record for the pesticide DIELDRIN.
Print the standard and full formats.

RN _____ ON _____

RN FILE LOCATORS _____

ON FILE LOCATORS _____

2. Find citations in TOXLINE by George D. Ledney.
 - a. Print out a standard and detailed record of Dr. Ledney's paper on "Skin wound-enhanced survival and myelocytopenia in mice after whole-body irradiation".
 - b. Note the difference in the two print formats.
3. Using the data from the Chemical record for the anti-inflammatory drug NAPROSYN, compare the numbers of retrieved citations when you use only the name given (naprosyn), the CAS Registry Number, and other synonyms.

RN _____

In the TOXLINE file:

citations using NAPROSYN _____

citations using RN _____

citations using other synonyms _____

OR together these 3 search statements for total _____

4. A requestor has seen the following name in a journal:

5-(3,3-DIMETHYL-1-TRIAZENYL)-1H-IMIDAZOLE-4-CARBOXAMIDE

Find its CHEMLINE record. RN _____

What synonyms look the most useful for a TOXLINE search?

5. Find information in TOXLINE of the effects of mercury on the central nervous system in children.

RN _____

SY _____

6. There is a government report in TOXLINE entitled "Health Effects of Synfuels Technology: A Review". You wish to order this document from NTIS.

ORDER NUMBER _____

PRICE _____

SUBFILE _____

7. A widely used antineoplastic agent has the following molecular formula:

C6 H12 N3 P S

Find the CHEMLINE record. RN _____

8. Find citations in TOXLINE about the irritation effects of ethyl acetate.

RN _____

SYNONYMS USED _____

9. In the TOXBACK74 file, how many citations are there on TIMOLOL?

a. Is there any information on the use of Timolol in cases of angina AND hypertension? What is the Journal Source?

b. Is there any newer publications on Timolol by the authors you found in response to question 10a.?

c. Is there any newer references in TOXLINE on the use of Timolol for angina OR hypertension?

CANCER DATABASES

Trainees will be able to:

- * 1. describe in general terms the scope and content of each of the three cancer files.
 2. describe the content and write the correct search entry format for the searchable data elements in CANCERLIT.
 3. distinguish between the AU, TI, SO and TA fields for serial and nonserial records in CANCERLIT.
 4. list the data elements processed for Text Words in CANCERLIT.
 5. describe the content and write the correct search entry format for the searchable data elements in CANCERPROJ.
 6. describe the content and format of the HT field in CANCERPROJ (and CLINPROT).
 7. list the data elements processed for Text Words in CANCERPROJ.
 8. describe the content under the correct search entry format for the searchable data elements in CLINPROT.
 9. list the data elements processed for Text Words in CLINPROT.
 - *10. formulate effective search strategies for all three cancer files given a set of sample questions.
 11. explain the difference between tumor, cancer and carcinoma.
 12. list at least ten terms to use in formulating the concept, human.
- * Objective applies to each of the databases, CANCERLIT, CANCERPROJ and CLINPROT.

CANCER FILES (CANCERLIT, CANCERPROJ, CLINPROT)
Initial Class-Lesson Plan

I. Introduction

MANUAL

- A. Brief mention of National Cancer Act of 1971, origin of ICRDB Program and NCI/NLM collaboration.
- B. Brief mention of other cancer information services of ICRDB.
- C. Statement of what lecture covers.
 - 1. Scope and content of 3 data bases
 - 2. Search entry format for searchable data elements
 - 3. Special points to remember and searching hints
 - 4. Group formulation
 - 5. Hands On Session

II. Definition of CANCERLINE

- A. Brief description of each data base; derivation of name, explanation of type of information, emphasis of when appropriate to search each data base.

III. Discussion of CANCERLIT

300,000

- A. Scope and Content (refer to scope chart handout) 16.1
 - 1. Describe scientific scope including years covered
 - 2. Describe journalistic scope including years changed
 - 3. State present number, update frequency, and estimated yearly growth
- B. Unit Record (searchable elements only)
 - 1. Author - same as MEDLINE 16.3.3
TW - AB, TI
 - 2. Title Abbreviation - standard, like TA in MEDLINE 16.3.13
TF - TI only - directly
 - 3. Year of Publication - rangeable 16.3.16
 - 4. Language - standard abbreviations as in MEDLINE 16.3.8

- | | |
|--|------------------|
| 5. Source Identifier - looks like TOXLINE, not same use; unique number | 16.3.11 |
| 6. Publication Type - describe each; mention Meeting Abstract and Letter to Editor also follow title | 16.3.10 |
| 7. ISSN and CODEN | 16.3.6
16.3.4 |
| 8. Entry Month - YYMM; must specify when ranging because default is to YR | 16.3.5 |
| 9. Keyword - indexing enrichment terms, none at moment, will be in future; | 16.3.7 |
| 10. Text Word - TI, AB | 16.4.1 |
| 11. Title, Author, Title Abbreviation and Source fields when nonserial document | |
| 12. Title Word (TF) - single terms textextracted from the title. | 16.4.1 |

C. Points to Remember

1. All records have abstracts
2. TA, LA, EM, AU fields all standard
3. No periods after abbreviations so SENSEARCH works very well
4. Appendix to manual has list of words always abbreviated

IV. Discussion of CANCERPROJ

- | | | |
|---|--------|---------|
| A. Scope and Content (refer to scope chart) | 20,000 | 17.1 |
| 1. Describe type of information, how it originates, how and who prepares it | | |
| 2. State present number, update frequency and estimated yearly growth | | |
| B. Unit Record (searchable elements only) (TW) AB, TI, HT (hierarchical) | | |
| 1. Investigator - same format as Author field | | 17.3.10 |
| 2. Fiscal Year - format; what field contains | | 17.3.6 |

- | | |
|---|-----------------------------|
| 3. Award Type - format; define contracts and grants | 17.3.3 |
| 4. Supporting Agency ID Number - format; use of Research Grant's Index | 17.3.12 |
| 5. Unique Identifier - format; explain continuation of projects; unique number | 17.3.15 |
| 6. Performing Organization - abbreviations, use manual appendix, use "NBR" | 17.3.11 |
| 7. Country (or State) - format | 17.3.4 |
| 8. Subject Captions, Hierarchical Terms, Hierarchical Subject Codes - mention briefly what they are and that they will be discussed in Advanced Class | 17.3.13
17.3.7
17.3.8 |
| 9. Text Word - TI, AB, HT | |
| 10. Funds - recent addition of this field | 17.3.18 |

C. Points to Remember

1. Project descriptions written by investigators themselves; not always well written, not always descriptive
2. Project descriptions enriched by liberal indexing
3. Descriptions usually segmented by Objective, Approach and Progress
4. Use # sign for periods when TSing SA field
5. No search term default - you get a multi-meaning message
6. Not all cancer research projects in CANCERPROJ
7. Often subprojects of large core grant will cause repetition
8. Contains information you will find in no other online database

V. Discussion of CLINPROT *ocols*

3,000

A. Scope and Content (refer to sheet)

Same as Cancerproj

18.1

1. Describe type of information, where it originates, who prepares it and what it can be used for
2. State present number, update frequency and estimated yearly growth

B. Unit Record (searchable elements only)

- | | |
|---|-----------------------------|
| 1. Identification Number - 3 different numbers; for NCI administrative use | 18.3.7 |
| *2. Stratification Points - describe content of field | 18.3.14 |
| *3. Protocol Phase - define 4 phases of study | 18.3.11 |
| 4. Accession Number - unique Identifying number | 18.3.16 |
| 5. Performing Organization - list of groups and abbreviations in appendix to manual | 18.3.12 |
| 6. Country (or State) - same as CANCERPROJ | 18.3.3 |
| 7. Subject Captions, Hierarchical Terms, Hierarchical Subject Codes - mention briefly what they are and that they will be discussed in the Advanced Class | 18.3.13
18.3.5
18.3.6 |
| 8. Text Word - TI, AB, HT | 18.4 |

C. Points to Remember

1. Abstracts are long but broken down into specific segments (protocol details)
2. Titles are very descriptive so little need to browse abstracts online
3. Do not need to input general treatment terms
4. All studies done in humans

VI. Searching Hints for Cancer Files

- A. Free text formulation in one will work for all (note however that general treatment terms and terms for human are not needed in CLINPROT)
- B. Differences between cancer terms tumor, cancer, and carcinoma
- C. Never use word cancer in these three files. Carcinoma and tumor can occasionally be of use
- D. Always enter noun and adjective when searching organ site; e.g., larynx and laryngeal

- E. Never use word human alone. Need patient or patients, man or men, woman or women, male and female (but remember get animals), adult or adults, child or children, adolescent or adolescents, boy or boys, girl or girls, and sometimes clinical helps
- F. Never rely on broad class names to get everything. For example, lymphomas: need adenolymphoma, lymphosarcoma, Burkett's lymphoma, Hodgkin's Disease, Marek's Disease, etc. Applies to chemical compounds also; e.g., hydrazines
- G. Tools
1. Cancer Medicine - ^{James}Holland and ^{Ernil}Frei
 2. MeSH
 3. Chemline

VII. Group Search Formulation - Methotrexate therapy for lymphocytic leukemia

- A. Stepwise search formulation on board
- B. Input into 3 data bases

VIII. Hands on Session

IX. Discussion of Practice Questions

Hand Outs

- A. In Training Class Workbook
 1. CANCERLIT Manual
 2. CANCERLIT Unit Record Description
 3. CANCERLIT Sample Record Printout
 4. CANCERPROJ Manual
 5. CANCERPROJ Unit Record Description
 6. CANCERPROJ Sample Record Printout
 7. CLINPROT Manual

8. CLINPROT Unit Record Description

9. CLINPROT Sample Record Printout

10. Practice Questions

11. ICRDB Flow Chart

B. In ICRDB Folder

1. Cancerline Brochure

2. ICRDB Information Service Pamphlet

3. Scope and Content Sheet

4. Sample Search Request

5. Information Sheets for ICRDB Services and Products

AB - A phosphodiesterase characterized by a generally hisher activity on 2'-5' than on 3'-5' phosphodiester bonds was isolated from mouse L cells treated with interferon. A similar enzyme was purified from mouse reticulocytes. The phosphodiesterase 2'-PDi splits the 2'-phosphate bond of pppA2'p5'A2'p5'A, the olisonucleotide activator of ribonuclease F. The level of phosphodiesterase 2'-PDi is increased by interferon treatment of L cells. The phosphodiesterase was also shown to desrade the cytidyl-cytidyl-adenyl terminus of transfer RNA (tRNA) and to reduce the amino acid acceptance of tRNA in cell free extracts, thereby causing a tRNA reversible inhibition of messenger RNA translation. AD - University of California; San Francisco Campus; School of Medicine; Dept. of Pediatrics; 551 Parnassus Ave.; San Francisco, California 94122

AB - The overall objectives of the project are the elucidation of molecular events occurring during mammalian oogenesis, fertilization, and early pre- and post-implantation development.

AB - Our goals for the current year are: A. The in vitro translation of messenger RNA's obtained from oocytes and very early embryos will be attempted. B. Protein synthesis during various stages of oocyte growth and maturation will be analyzed by two-dimensional electrophoresis. C. The split-embryo technique will be used for the study of development mutations which affect early embryonic development. D. Studies on the comparative protein synthesis of teratocarcinoma cells and of normal early post-implantation embryos will be carried out with two-dimensional electrophoresis to define better the similarities and differences between normal embryonic cells and teratocarcinoma stem cells.

THE CLINPROT DATABASE

On May 9, 1977 a new database, CLINPROT (CLINical Cancer PROTOcols), was made available to all U.S. and foreign users of the NLM online computer system.

This database is sponsored by the International Cancer Research Data Bank (ICRDB) Program of the National Cancer Institute and should be considered an experimental database. The present format of the file as well as its continued availability depends on the feedback received by the ICRDB Program during this experimental period.

CLINPROT contains approximately 2,500 summaries of clinical investigations of new anticancer agents and treatment modalities. Most of the protocols were supplied by the Division of Cancer Treatment (DCT) of the National Cancer Institute. Several hundred have also been supplied by major U.S. cancer centers and by sources outside the United States.

The file contains detailed descriptions of all phases of clinical trials; Phase I studies which attempt to define an agent's limiting toxicities, time courses, dose-response relationships, etc; Phase II studies primarily designed to specify unambiguously the types of tumors which do or do not respond; Phase III which must establish the efficacy of a drug as a meaningful treatment and Phase IV which develops the use of this drug in combination with other therapies. The bulk of the file will be Phase II and Phase III studies.

The protocol descriptions will also define the entry criteria for the patient (e.g. acute leukemia with no prior therapy and no more than 30% blasts in the bone marrow), give the details of the therapy, and provide the dose schedule, special study parameters and the various medical data collected and followed.

CLINPROT is a small highly specialized file which should be most useful to a narrow segment of the total NLM user base. It is primarily designed for clinical oncologists who are actively engaged in the development and testing of new clinical protocols. However, it may also be useful to other clinicians who may wish to be aware of new cancer treatment methods currently being evaluated in controlled clinical trials.

The experimental nature of these protocols is emphasized by a paragraph in each record which states: "Warning; Many of these agents are hazardous and have FDA approval for only clinical investigations by specialists in clinical oncology. In many cases, the protocols are not yet known to be more effective than existing treatment methods."

The unit record is listed below with a description of the data elements.

UNIT RECORD DESCRIPTION*

Category Names	Category Qualifier	Search	Print	Print Full
Investigator	IR	X	X	X
ID Number	ID	X	X	X
Title	TI		X	X
Address	AD		X	X
Stratification Points	SP	X		X

Final Year	Y2			
Unique Identifier	UI	X		
Performing Organization	PO	X		
Country (or State)	CY	X		
Entry Month	EM	X		
Subject Captions	SC	X		
Hierarchical Subject Codes	HC	X		
Hierarchical Terms	HT			
Major Revision Date	MR	X		
Text Words	TW	X		

*All data elements will be displayed with the "PRT DETAILED command.

UNIT RECORD EXPLANATION

1. Investigator - the name of the principal investigator or the cooperative group chairman.
2. ID Number - the supporting agency's identification number and/or the protocol number.
3. Title - the title of the protocol.
4. Address - the name and address of the group conducting the studies.
5. Stratification Points - the entry criteria (parameters) by which patients are chosen.
6. Protocol Phase - the phase of the drug studies.
7. Abstract - a summary of the protocol which includes the protocol entry criteria and the protocol outline.
8. Protocol Details - this field includes the objectives, stratification points, special study parameters, end points, current status, dosage schedule, dosage forms and protocol chairman's telephone number.

9. Initial Year - the date of first patient entry.
10. Final Year - the date the last patient enters the study.
11. Unique Identifier - a sequential number input by SSIE as they process the protocols.
12. Performing organization - the name of the group conducting the studies.
13. Country (or State) - the name of the country where the studies are taking place. For U.S., the name of the state and/or USA can be used as a search term.
14. Entry Month - the date the protocol was entered into the NLM computer system.
15. Subject Caption - the specific SSIE indexing terms added.
16. Hierarchical Subject Codes - the numeric codes for each of the specific index terms added.
17. Major Revision Date - the date when a major change was made to the record.
18. Text Words - all the significant words which appear in the Title field, the Abstract field and the Hierarchical Terms field.

Free text searching is the primary searching mechanism but each record is also indexed, as is CANCERPROJ, with controlled terms from the SSIE thesaurus. These controlled terms (Subject Captions) can also be used in searching the data base. The feasibility of enriching the protocol summaries with MeSH terms is being explored.

CLINPROT

- ID - MSKCC-7588
- IR - Golbey RE
- TI - COMBINATION CHEMOTHERAPY WITH MeCCNU, 5-FU AND VINCRISTINE FOR PREVIOUSLY UNTREATED LARGE BOWEL CANCER
- AD - Memorial Sloan Kettering Cancer Center; 1275 York Ave.; New York, New York 10021
- AB - OBJECTIVES:
- AB - I. Evaluate the relative effectiveness of two schedules of MOF combination chemotherapy in patients with recurrent metastatic carcinoma of the large bowel.
- AB - PROTOCOL ENTRY CRITERIA: Patients with colon or rectal carcinoma with measurable non-resectable or residual disease, who have had no previous adequate chemotherapy nor been rendered free of disease by radiotherapy.
- PD - Protocol chairman's telephone number is: 212-774-7093
- PD - WARNING: Many of these agents are hazardous and have FDA approval ONLY for clinical investigations by specialists in Clinical Oncology. In many cases the protocols are not yet known to be more effective than existing treatment methods.
- PD - PROTOCOL OUTLINE: Randomized study.
- PD - Arm I: 3-Drug Combination Chemotherapy. MOF - Methyl CCNU, MeCCNU, NSC-95441; 5-Fluorouracil, 5-FU, NSC-19893; Vincristine, VCR -NSC-67574.
- PD - Arm II: 3-Drug Combination Chemotherapy. MOF, different MeCCNU dosage.
- PD - STRATIFICATION BY: Performance status, time interval from diagnosis to metastasis, lung involvement.
- PD - SPECIAL STUDY PARAMETERS: CEA, 5-nucleotidase, bone and liver scans.
- PD - END POINTS: Response/remission rate; duration of response; toxicity/morbidity of treatment; objective tumor response; survival rate; length of survival.
- PD - CURRENT STATUS: Protocol closed and terminated 02/78.
- PD - DOSAGE SCHEDULE:
- PD - Arm I: MOF: MeCCNU - 150 mg/sqm po on day 1; 5-FU - 300 mg/sqm iv on days 1 through 5 and 36 through 39; VCR - 1.0 mg/sqm iv on days 1 and 36. Repeat course q 71 days. Remove from study patients who evidence a 25% increase in objective parameters.
- PD - Arm II: MOF: MeCCNU - 30 mg/sqm po on days 1 through 5; 5-FU - 300 mg/sqm iv on days 1 through 5 and 36 through 40; VCR - as in Arm I. Repeat q 71 days. Treat failures as with Arm I.
- PD - Dosage modifications for toxicity are given.
- PD - DOSAGE FORMS: Not given.

CANCERLINE Files (CANCERLIT, CANCERPROJ, CLINPROT) Practice Questions

Initial Training Class

1. Find information discussing chemotherapy of bronchogenic and mediastinal tumors.
 2. Find information about bladder or kidney cancer following exposure to hydrazine compounds. When searching published literature, limit retrieval to the 1970's.
 3. Locate information discussing the epidemiology of lung cancer in women. When searching published literature, limit retrieval to articles added to the database September through October, 1976.
 4. Find information on therapy of synovial sarcoma. When searching published literature, limit to journal articles.
 5. Locate any information discussing the use of ICRF-159 in the chemotherapy of cancer in humans.
- * Try the above questions in every appropriate cancer file.

FINAL SEARCH SESSION

Directions:

Review the question stated below and develop an appropriate search strategy for MEDLINE and at least one free text data base (TOXLINE, CANCERLIT).

Question:

Find articles on the relationship between artificial sweeteners and bladder cancer.

Requester: Physician Purpose: Patient care

Conditions: interested in publications 1976 forward
include abstracts
English language articles only
would like author addresses if possible

ADMINISTRATIVE INFORMATION

Trainees will be able to:

1. describe the role and function of MEDLARS Management Section (MMS) in relation to network participants
2. list several of the services provided by MMS
3. explain the correct use of the toll-free telephone number
4. describe the NLM billing procedures and policies
5. describe policies regarding availability and use of demonstration and training codes
6. understand the use of the PROFILE command for changing passwords, pagelength and for entering stored addresses

MAJOR MMS ACTIVITIES

- USER SUPPORT:
 - SERVICE DESK
 - INDEXING/SEARCHING/DATA BASE ASSISTANCE
 - NEWS/LETTERS/COMMENTS

- ONLINE CENTER APPLICATIONS

- TRAINING/DEMONSTRATIONS/EXHIBITS

- DISTRIBUTION OF OFF-LINE PRINTS AND OFFSEARCHES

- AUTOMATIC SDIs

- STATISTICS AND MANAGEMENT INFORMATION

- BILLING AND CODE ASSIGNMENT

- PUBLICATIONS:
 - INDEX MEDICUS
 - RECURRING BIBLIOGRAPHIES
 - TECHNICAL BULLETIN
 - ONLINE REFERENCE MANUAL
 - USER GUIDES

- OTHER:
 - COMPUTER REQUIREMENTS
 - TAPES FOR NON U.S. CENTERS

NLM AUTOMATIC SDI SERVICE REQUEST FORM

MEDLARS USERID CODE UNDER WHICH SEARCHES WILL BE STORED

M	E	D				
---	---	---	--	--	--	--

Name and address to which results should be sent: (no more than 50 characters per line)

_____ name

_____ address

_____ city, state, zip

Name and telephone number of the person who coordinates SDI service at your organization >

_____ name
_____ telephone number

This form is being submitted in order to:

- BEGIN SERVICE ON THE _____ DATABASE (ONLY ONE PER FORM)
- CHANGE A PREVIOUSLY SUBMITTED FORM

Please note that NLM automatic SDI searches must be named beginning with a four-character code (one letter, three numerical digits) that indicates which database the search is to be run against and the print format in which the retrieval should be printed. A table on the back of this form shows the available numerical ranges.

You may specify below any changes in the PRINT or SORT specification(s) you would like made to any numerical range. If you do not specify otherwise, the default SORT and PRINT values (see the back of this form) will be used.

NUMERICAL RANGE	PRINT ELEMENTS	SORT ELEMENTS*
_____	_____	_____
_____	_____	_____
_____	_____	_____
_____	_____	_____

*Users are encouraged to choose a precoded SORT format (such as AUTI) rather than a tailored format.

NOTE -- Use a separate form for each database for which automatic SDI searches will be stored. Submit only one form for each database; thereafter, submit a form only to change information on a previously submitted form, or to begin service on a different database, or to discontinue service.

RETURN THIS COMPLETED FORM TO:

EXAMPLE - a stored search named S645 PARVOVIRUS will be processed each month against SDILINE, and the citations will be printed in the AU, TI, SO, AB format, in order by journal and date of publication.

AUTOMATIC SDI SERVICE: NEW FEATURES FOR 1982

Joseph Leiter, Ph.D., Associate Director, Library Operations, NLM

Automatic SDI service has been available through the National Library of Medicine online system since mid-1976. At present, approximately 15,000 searches are processed automatically each month. In response to requests from search analysts, three enhancements to the NLM Automatic SDI Service will become available in January 1982:

- 1) The Health Planning & Administration database will be available for Automatic SDI service
- 2) All citations retrieved by Automatic SDI searches will be sorted, either by journal and publication date or by elements and directions specified by the searcher
- 3) Greater flexibility for print formats will be offered

Health Planning & Administration Automatic SDI Service

Searchers may now store searches that are to be performed against the HEALTH file each month after it is updated. These searches must be stored on the NLM computer and use the letter H as the first character of the name. To facilitate the storing of these searches while connected to the HEALTH file, searchers who can usually only access the HEALTH file at SUNY will be able to access this database at NLM between 12 noon and 1:00 pm ET daily (Monday-Friday) and every Saturday between 8:30 am and 5:00 pm ET during the month of January. After January, searchers ordinarily having access to the HEALTH file only at SUNY will be able to access HEALTH at NLM between 12 noon and 1:00 pm ET every Tuesday and every Saturday between 8:30 and 5 ET. Alternatively, any user may store searches for HEALTH file Automatic SDI service while connected to the SDILINE file, at any time. Any searcher who wishes to begin Automatic SDI service on the HEALTH file should complete and return an Automatic SDI Service Request Form, enclosed with this issue of the Technical Bulletin, to the MEDLARS Management Section, NLM. This form may be freely reproduced for your use. The first Automatic SDI processing for the HEALTH file will occur with the February update on January 11.

SORT for Automatic SDI Citations

Each of the databases available through the NLM Automatic SDI service has a default SORT for Automatic SDI searches assigned to it; printouts from these databases will be sorted according to journal and then by date of publication as specified by the precoded SORT, 'JNL,' for that database. The 'JNL' SORT format for NLM databases is described in detail in the June 1981 Technical Bulletin, page 10. The data elements used for the 'JNL' SORT for each database are:

- | | |
|--|----------------|
| SDILINE - TA A, DP D, VI D, IP D, PG A | A = Ascending |
| TOXLINE - SO A | D = Descending |
| CANCERLIT - TA A, YR A, TI A | |
| HEALTH - TA A, DP D, VI D, IP D, PG A | |

As shown on the enclosed Automatic SDI Service Request Form, the searcher may specify a different SORT for any number range in any database. However, it is suggested that searchers use a precoded format, such as AUTI, rather than a tailored one. Alternatively, the searcher may specify NO SORT for any number range for any database; in that case, the citations will be printed out as they were previously: the last citation entered will be the first citation printed.

Tailored PRINT Formats For All Number Ranges

Previously, stored searches named within a particular number range (for example, S011 VIRAL SEQUENCE is in the 001-200 range) could produce printouts only in the one print format available for that range. Now, however, the searcher may request any print format for any number range. A search named S011 VIRAL SEQUENCE (processed automatically on SDILINE) will have any citations retrieved printed out in the Standard format (AU, TI, SO) unless the searcher has submitted an Automatic SDI Service Request Form indicating that the S001-S200 number range should produce some other print format. If the searcher has requested that the S001-200 range print out AU, TI, SO, AB, LA, then these data elements will be printed instead for S011 VIRAL SEQUENCE.

Note

Remember to send in an Automatic SDI Service Request Form whenever you wish to change one of the following: database(s) on which you want to have Automatic SDI service, print specifications for a number range, SORT specifications for a number range, or mailing address. Please do not send in a form for each search stored; only one form is needed to begin service. HEALTH Automatic SDI processing of searches will begin with the February update on January 11. Searches will be processed against HEALTH during the week of January 11-15. The sorting of printouts and the ability to specify print elements on all ranges will be utilized beginning in January for all files for which Automatic SDI service is provided.

The Automatic SDI Service Request Form is enclosed with this issue.

NATIONAL LIBRARY of MEDICINE FACT SHEET

Bethesda, Maryland 20209

April 1980

NLM Online Services Program Policy Statement

I. Network Objectives

Consistent with its legislative mandate and recommendations of the Board of Regents, the National Library of Medicine (NLM) is committed to the development and operation of an online services network. The objectives of the network are to provide:

- Rapid and efficient delivery of bibliographic and other literature-based information.
- Cost effective online services complemented by efficient document delivery through participating members.
- Equal network access, to the extent possible, while serving the basic purpose of support to health care delivery, education, and research.

II. Service Policies

A. General

The NLM approves new users, maintains overall systems management and provides supporting services such as training and assistance to users. The Regional Medical Libraries (RML) provide applications to potential online users, assist new users, and otherwise support network services in their regions.

B. User Admittance and Classification

In order to effectively and efficiently utilize the limited computer resources of NLM, a priority access system is established. As capacity permits, new users will be admitted to the system. Preference will be given to high priority health institutions and, where possible, Priority II institutions will be admitted. At any time, Priority II users might be restricted from use of the system, particularly when computer capacity is strained. Institutional users are classified as follows:

Priority I

- Direct Patient Care Facilities
- Health Professional Educational Institutions
- Organizations Primarily Engaged in Health Protection Activities
- Federal and State Health Agencies

Priority II

- Other Educational Institutions with Health or Information Science Programs
- Other Federal, State and Local Agencies not in Priority I
- Societies, Foundations, and Other Organizations with Secondary Health Responsibilities

Individuals are encouraged to use NLM online systems through established institutional centers, but may apply for access codes in unusual cases.

C. Responsibilities of Members

1) Online centers agree to send at least one individual for NLM sponsored training in the use of NLM's online system. NLM reserves the right to waive training for qualified individuals who demonstrate significant online experience or on-the-job training.

2) Online centers agree to provide access to all users commensurate with available resources.

3) Service costs may be passed on to the individual requester. Where charges are imposed, they must clearly distinguish that portion which represents NLM charges, such as connect-hour and page costs, from the charges levied by the network participants.

III. Prices

Consistent with the National Library of Medicine Act (Section 383), the NLM Board of Regents has established a domestic pricing policy permitting NLM to recover costs associated with the direct provision of services. Such costs include communications, back-up computer services, and user fees for data bases from other organizations. The Board of Regents has delegated to the Director of the National Library of Medicine the authority to set prices at the level required to ensure effective and efficient management of the system and the authority to establish priorities for users. To the extent practicable, such costs recovered from member institutions will be independent of their geographic location.

NATIONAL LIBRARY OF MEDICINE INTERLIBRARY LOAN REQUEST STANDARDS
Jim Cain, Circulation and Control Section, NLM

While NLM staff has filled more than 147,800 interlibrary loan requests so far this fiscal year (October 1980 - July 1981), more than 20,000 requests have been rejected by NLM's Circulation and Control Section during this period. "Rejects" are requests that are returned with no or limited searching because the form was incorrectly filled out, the material requested was out of scope, the request did not follow the Regional Medical Library Network procedures, etc. Rejection and subsequent resubmission of a request adds an estimated two weeks to processing time. Librarians can avoid such delays by rechecking their requests, before they are sent, against the standards that follow. NLM in turn will make every effort to provide quality service for document delivery as expeditiously as possible.

Standards:

1. Requests must be submitted on either standard ALA Interlibrary Loan Request Forms in triplicate, or by TWX. Examples of both, with guidelines for use, follow after the standards.
2. Requests must be signed (ALA form) by the individual responsible for interlibrary loans. On TWX requests the name of the responsible individual must be entered.
3. Requests for photocopy service must carry a statement of U. S. Copyright Compliance. Either conformance to the copyright law (CCL) or the copyright guidelines (CCG) must be indicated, but not both. NLM prefers that requests for original loans also carry the statement in order to facilitate the initial sorting process.
4. Citations should contain the required bibliographic elements. NLM prefers that requests be verified, though this is not required. Those requests that are not verified will receive limited searching while verified requests will be searched more thoroughly. If there are insufficient bibliographic elements to attempt a search, the request will be rejected immediately.

If the verification gives an NLM database as the source of the citation, state the specific name of the file from which the citation has been taken. MEDLINE is only one of our 19 databases. Do not put "MEDLINE" if the citation was found, for example, in TOXLINE or CATLINE.

If a citation is from an NLM database, and the NLM Call Number is present, this must be included on the request, or the request may be returned.
5. Requests must include a complete address with zip code. TWX users please take note of this point.
6. Requests must be submitted one per ALA form or TWX message. Our system of locating and processing items requires that each item must be requested on a separate form.
7. Requests must be typed.

8. Requests must be submitted through a library. Materials are available only as interlibrary loans, and not directly to individuals.
9. Requests must follow the RML Network procedures. Only certain libraries may submit requests directly to NLM; all others must send their requests to a Resource or Regional Library. (Foreign libraries may submit directly if the material requested is not available locally.)
10. The subject content of requests must be within the scope of the NLM collection. (The Scope and Coverage Manual of the National Library of Medicine is available from the National Technical Information Service, PB-271-252, \$5.25.)

USE OF TELETYPEWRITER EXCHANGE SERVICES
FOR INTERLIBRARY LOAN REQUESTS
(Revised June, 1981)

The National Library of Medicine can access requests through two teletypewriter exchange services as part of its program to speed interlibrary loan service. Through the Western Union service the numbers are 710-824-9615 and 710-824-9616. Through the Bell System service the number is 301-492-1817.

The format to be used for teletypewriter requests is based on the standard ALA interlibrary loan form. To facilitate teletype use, examples of requests are shown on the next page.

Message identification. Every request must contain, as the second line of information, the date of transmission, immediately preceded by the serial number of the message. When several requests are included in a single message transmission, each separate request must bear its own date, identification number, and return address, since copies of articles are forwarded in a specially designed mailer which uses a copy of the loan request for the address. The mailing address must include the ZIP CODE.

Standard abbreviations (followed by the sequential serial number and date) will be used to identify the type of message, and will be considered as part of the serial number:

ILLRQ - Interlibrary Loan Requests.
ILLRP - Interlibrary Loan Reports.

Each message should be numbered sequentially to permit rapid referral in replies. Message date should read as follows: 22/JUN/81.

Please insert 5 or 6 spaces between messages to allow speedier separation of messages.

Message fees. The borrowing library will pay all teletypewriter message fees involving ILL communication with NLM.

NON-NLM TITLES IN NLM ONLINE FILES:
 INTERLIBRARY LOAN LIBRARIANS TAKE NOTE!
 Jim Cain, Circulation and Control Section, NLM

Please note that in POPLINE, HEALTH and several "Special List" indexes (e.g., Dental and Nursing) some serials are included that are not in the NLM collection. These titles are indicated in SERLINE by: 1. a note stating they are not in the NLM collection, and 2. the indexing source instead of a call number in the Call Number (CA) field. This is illustrated in the following SERLINE record:

TI - ACADEMY OF MANAGEMENT REVIEW
 TA - ACAD MANAGE REV
 FL - 1,1958--
 PL - MISSISSIPPI STATE MS
 PU - MISSISSIPPI STATE UNIVERSITY
 GN - THIS TITLE IS NOT IN THE NLM COLLECTION — GENERAL NOTES FIELD
 IS - 0001-4273
 AI - PA
 AI - HLI
 AI - MAP
 FR - G
 OC - OPEN
 LA - ENG
 CY - UNITED STATES
 CA - AHA — INDEXING SOURCE: AHA
 UI - A02730000

To avoid delays and confusion, do not send requests for these non-NLM titles directly to NLM. NLM does not refer loans to these "Special List" indexing sources. Such requests are returned to the requesting library. If the item is not available through the RML Network, you may wish to contact these sources directly for their loan and photocopy policies. A list of possible values for the Call Number (CA) field with addresses of the organizations to contact follows:

- ADA - Bureau of Library Services
 American Dental Association
 211 East Chicago Avenue
 Chicago, Illinois 60611

- AHA - Library of the American Hospital Association

NEW SORT CAPABILITY

Lou S. Knecht, MEDLARS Management Section, NLM

OVERVIEW

The following article describes NLM's new capability for sorting offprints alphabetically. It will be implemented at NLM in June 1981 and shortly thereafter at SUNY. There will be no extra charge for sorted printouts, and the capability will be available on all databases except TDB and RTECS.

SORT functions as a prespecified keyword rather than a command. The user initiates the sort during the question-and-answer portion of an OFFSEARCH or offline PRINT command. The simplest of the three possible ways to use the sort is to enter one of the Precoded Sort format names (a list of these is included as Table A with this article) after a user prompt as follows:

```
PROG:  
SEARCH TITLE, OR NONE-
```

```
USER:  
SORT = AUTI
```

This example would result in the printout being sorted first on author, then on title, A through Z, then 0 through 9.

There are two other ways of sorting: Tailored Sort and Print Order Sort. All three are described in detail below. Citations also can be sorted in descending order (9 through 0, then Z through A). Sort instructions can be cancelled easily while still in the question-and-answer phase.

The offprint cover sheet will have a special message telling the user what (if any) sort format was used for that search.

Additional details on how the sort actually "works" are contained in the last section of the article, including punctuation rules, special delimiters in CATLINE/AVLINE, and sort restrictions for large retrievals.

INTRODUCTION

In June 1981, NLM expects to implement new software, to be known as ELHILL 3.2A, that supports the offline sorting of citation retrieval. ELHILL 3.2A is an enhancement of ELHILL 3.2 which was introduced in March 1980 and featured SAVESEARCH, SAVE, and PROFILE of the Unified User Specification File (UUSF). The present software architecture of ELHILL does not lend itself to sorting online. It is hoped that a future generation of this system will allow it. ELHILL 3.2A is the first step in that direction and is the result of a further collaborative effort between NLM and the British Library.*

*The ELHILL 3.2A software was developed by David L. Kenton, Office of Computer and Communications Systems, NLM, and Fred Bone, BLAISE, British Library.

It allows a user to request that records being printed offline (offline prints and OFFSEARCHes) be sorted by particular fields, for example, Author (AU) and Title (TI). This capability will be available for all the ELHILL databases except RTECS and TDB. The structure of these two databases precludes sorting.

WHAT IS SORT

Sorting is simply the alphabetizing of output. The user selects both the data element(s) to be sorted upon and the direction of the sort(s).

Data Element Options

The three ways to select data elements for a sort are categorized as follows:

1. **Precoded Sort** - NLM has stored a series of standardized sort formats with names (known across databases) that are similar to the PRINT format names of FULL, DETAILED, etc. See Table A;
2. **Tailored Sort** - A user may specify a list of up to five (5) element mnemonics, and a direction for each;
3. **Print Order Sort** - The system will sort on the elements in the order that they appear on the offline print as dictated by the PRINT OFFLINE command or PRINTSPECS? answer in OFFSEARCH.

Direction -- ASCENDING or DESCENDING

The direction of a sort can be either ASCENDING, which is A-Z followed by 0-9, or DESCENDING, which is 9-0 followed by Z-A. The direction is always assumed to be ASCENDING, and therefore, the word ASCENDING need not be specified. However, if you want the direction to be DESCENDING, you must include that word in the sort statement. This will be illustrated in the following sections. Legal abbreviations for these directions are DESC or D for DESCENDING, and ASC or A for ASCENDING.

Sorting will override the default (or standard) order of citation printing which is reverse chronological order by entry into the system, or "last citation entered is the first citation printed."

HOW TO REQUEST A SORT

You will never be prompted to enter a sort; rather, you must initiate the sort instruction by entering the 'SORT =' keyword at any point in the question-and-answer phase of an OFFSEARCH or an offline PRINT command. NLM recommends entering the 'SORT =' keyword in response to either the REQUESTER'S NAME, OR SAME- prompt or the SEARCH TITLE, OR NONE- prompt. The system will never give a confirmation that the SORT instruction was received; it will only re-prompt for an answer to the question that you did not yet answer. The system may give you an error message in certain cases, e.g., if a Precoded Sort name was used that is not defined for the database selected for the search. The 'SORT =' keyword works like any other prespecification keyword you may have used in the past, e.g., 'LIMIT ='; 'NAME ='; 'CITSTAZIP ='. The following is a generalized summary of the 'SORT =' keyword:

1. Precoded Sorts:

SORT = format name

SORT = AUTI

Citations are to be sorted on the data elements included under the sort format name. Here, AUTI is a Precoded Sort which ELHILL 3.2A knows to be equivalent to 'SORT = AU, TI' for MEDLINE.

SORT = format name, DESCENDING

SORT = AUTI, DESCENDING

The word DESCENDING means that the sort is to be in reverse direction for each data element in the format. Here, AU would sort from 9-0 and then from Z-A, and TI would also.

Notes

See Table A for a list of NLM Precoded Sorts.

Precoded Sort formats are good to use when searching dissimilar files. They have been standardized to account for differences in database structures. For example, if you search both CANCERLIT and CANCERPROJ in OFFSEARCH and specify 'SORT = AUTI', the system interprets that sort format name to mean Author (AU), Title (TI) for CANCERLIT but Investigator (IR), Title (TI) for CANCERPROJ since the latter does not have an Author (AU) field. In other words, a Precoded Sort format name represents a concept across all databases for which it is defined and not necessarily the same data elements that compose the sort format name.

Direction for a Precoded Sort applies to each element in the sort format.

2. Tailored Sorts:

SORT = elem1, elem2,...elem5

SORT = LA, AU, TI

Citations are to be sorted on the named elements in the exact order as listed. Here the first sort is on language and if many citations have the same LA, then the second sort is on author; if several citations have the same LA and the same AU occurrences, then the third sort is on title of the article.

**SORT = elem1, DESCENDING, elem2,
elem3, DESCENDING,...elem5**

**SORT = LA, DESCENDING,
AU, TI, DESCENDING**

The word DESCENDING means that the sort is to be in reverse order for the immediately preceding element. Here LA and TI would sort from 9-0 and then from Z-A, but AU would sort from A-Z and then from 0-9.

Notes

Up to 5 data elements may be listed in a Tailored Sort.

Each element may have a direction specified but each direction applies only to the immediately preceding data element.

Commas are mandatory between data elements but optional between an element and its direction, e.g.: 'SORT = LA DESCENDING, AU, TI DESCENDING'.

3. Print Order Sorts:

`SORT = PRINT`

Citations are to be sorted on the elements implied in the PRINT OFFLINE command or those listed in an OFFSEARCH PRINTSPECS. If you use the name of a PRINT format for PRINTSPECS (STANDARD, FULL, etc.), the elements used would be taken from the PRINT format in the order that they print out for each database. If you specify 'PRT OFFLINE AR' for MEDLINE, then the sort would be on AU, TI, and AB in that order. SO would not be considered because it is not stored in the unit record as a data element but made up of 5 other elements. Additional data elements not stored in the MEDLINE record and therefore not sortable include YR (Year) and MN (MeSH Tree Number).

`SORT = PRINT, DESCENDING`

Citations are to be sorted on the PRINT OFFLINE command elements or the PRINTSPECS fields in the order that they print out, but in reverse direction. If you specify 'PRT OFFLINE AR' for MEDLINE, then the sort would be on AU, TI, and AB but in DESCENDING order on each. Again, since SO is a data element conglomerate made up of 5 other data elements, it is not used in the sort.

Notes

`SORT = PRINT` is good to use for an OFFSEARCH sort if you have responded with a PRINT format name (STANDARD, FULL, etc.) to PRINTSPECS and you are searching dissimilar files.

PRINT may be abbreviated as PRT.

If a PRINT format contains more than 5 elements, only the first 5 are used.

Direction in a Print Order Sort applies to all data elements used by the system for the sort.

HOW TO CANCEL A SORT

There are three ways to cancel a sort instruction without cancelling the offline print as long as you are still in the question-and-answer phase. You may enter a second 'SORT =' instruction that will override the first. You may enter 'SORT = NONE', or 'SORT = CANCEL'. The latter two negate a previously entered sort instruction. Not entering any sort keyword will, of course, result in your retrieval being printed in the default order of "last citation in is the first citation out."

OFFPRINT COVER SHEET

Your offline prints will have a new look with the implementation of ELHILL 3.2A. The cover sheet will have a special sort message appearing under the standard database message 'THIS SEARCH WAS PERFORMED ON THE XXXX FILE'. There are four possible variations of this sort message:

- 1) 'SORT = SORT FORMAT ('AUTI'), (ASCENDING) WAS SPECIFIED' for the Precoded Sort name AUTI.
- 2) 'SORT = (ELEMENTS/DIRECTIONS GIVEN BY USER) WAS SPECIFIED' for a Tailored Sort requested by the user. Note that the message will not say what the elements were. For this reason, NLM recommends that you include the sort information in your search title if you need to know it, e.g.: HOLISTIC HEALTH SORTED BY LA, AU, TI. Warning: Do not use 'SORT =' in your title; the computer will interpret it as another sort instruction.
- 3) 'SORT = PRINT ('FULL'), (ASCENDING) WAS SPECIFIED' for the Print Order format sort of PRT FU OFFLINE or FU in response to OFFSEARCH PRINTSPECS.
- 4) 'SORT WAS NOT REQUESTED' for no sort or a cancelled sort.

OTHER ITEMS OF INTEREST

Other tidbits about SORT that may interest you are the following:

- 1) All lowercase letters are converted to uppercase before sorting.
- 2) All punctuation is converted to spaces. A space is an actual character and files before nothing. Punctuation that begins a field is converted to a space and then the field is left-justified so that it sorts correctly. This permits foreign titles with brackets in MEDLINE to file correctly with English titles.
- 3) If a data element specified for a SORT is not contained in a record, then the SORT program sets the value for that missing element to be a space. That space causes all records without the data element to file before records with the data element. For example, 'SORT = AUTI' will result in all anonymous article records (i.e., those with no AU field) to file in alphabetical order by TI (Title) before the alphabetical sort by author on those records with an AU field(s). If the sort is DESCENDING, then records missing the element will file last.
- 4) The sort key used by the system consists of up to 100 characters of data taken from the specified data elements. If one of the data elements has multiple occurrences (e.g., multiple authors), all occurrences are considered for the sort before moving on to the next data element, or until the 100 characters of data allowed are used up. Therefore, if you specify five data elements for a sort but the first three take up the allowed 100 characters, then the last two data elements will not function in the sort.
- 5) If a data element stored in the unit record consists of several sub-elements, only the first subelement is used for the sort. For example, Initial Year (Y1) in CATLINE consists of two subelements - a code for type of date and the actual date. Since the format is Y1 - S:1976, a sort on Y1 would file alphabetically by the code for type of date (in this case S for single year), since it is the first subelement, and not on the actual date.

- 6) In databases that use filing delimiters (i.e., CATLINE and AVLINE), the sort obeys the delimiter. For example, in the title THE!HEART, the ! is a filing delimiter causing the sort to be performed on Heart, not The.
- 7) You cannot merge a Tailored Sort with a Precoded one. In other words, you cannot say: 'SORT = AUTI, LA D'. You must say: 'SORT = AU, TI, LA, D'. (Reminder: The D refers to LA only in this example.)
- 8) The implicit last data element in any sort is the date of entry into the system or "last in, first out" rule. This is an "extra" sort and is not counted as one of the allowable five data elements. For example, SORT = LA would result in many citations having the same sort key, e.g., ENG. All citations with ENG as the language would then be sorted by the "last in, first out" rule.
- 9) If an OFFSEARCH retrieves more records in a particular database than will be printed (i.e., more than 500 or more than the number you specify for 'LIMIT ='), no sorting will be performed for that database only. For example, suppose you specify 'LIMIT = 200' for an OFFSEARCH against TOX74 and also specify 'SORT = AUTI'. If the postings retrieved for TOX74 are 201 (or more), ELHILL 3.2A will not sort the citations, but it will print the first 200 in "last in, first out" order. However, the SORT message on the offprint will not indicate that the sort was not performed. Your only clue (besides the fact that the printout is noticeably not sorted) is the truncation message "PRINT TRUNCATED AT 500", or the LIMIT message "PRINT LIMITED BY USER TO XXX".
- 10) A citation can file in only one spot, e.g.: AU - Albee AJ; Jones C will sort only in the A's for Albee and not also in the J's for Jones.
- 11) The SORT capability supplied by ELHILL 3.2A should not be thought of as the all-encompassing sort of a publication such as Index Medicus or British National Bibliography. It could not have all the logic of a publication sort system, such as the generation of common sort versions for names like McArthur and Macarthur. However, CATLINE and AVLINE do include some sort versions stored as subelements in certain data elements like the Title (TI). If a Sort Version subelement is present in a field, then ELHILL 3.2A uses that Sort Version in its own sort. For example, the field 'TI - Abstracts, 12th International Cancer Congress' in CATLINE has a stored Sort Version so that '12th' is seen by the computer as 'twelfth' and the alphabetization will be "Abstracts t...", not "Abstracts 1..." Also, ELHILL 3.2A is a character-by-character sort, and not a decimal sort. For example, the number 11 (eleven) would file before the number 9 (nine) because the first character of eleven is a 1 and that will file before a 9.
- 12) Although it is not required, you may wish to print the data elements on which you are sorting so that the alphabetical order of the printout is easier to see at a glance.

FUTURE ANNOUNCEMENTS

NLM is pleased and proud to bring you this new capability. Watch for a broadcast and online NEWS note for the announcement of the exact date that you can

begin to sort your printouts at NLM, and later at SUNY. You will be able to use 'EXPLAIN SORT' as an online aid for a description of sorting on ELHILL 3.2A. Manual pages will be mailed at a later date. A sample of SORT and the list of Precoded Sort names follow this article.

NLM will be making its new SORT capability available for the Automatic SDI Program (SDILINE, TOXLINE, AND CANCERLIT) in the near future. Information about this capability will be in a later issue of the NLM Technical Bulletin.

Your comments and suggestions on SORT are welcomed.

MONTHLY HINT: HOW TO SORT ON JOURNAL TITLES
 Lou S. Knecht, MEDLARS Management Section, MLM

The new SORT capability can alphabetize offprints by journal title in those databases that cite journal literature. There are two basic ways to request a journal title sort:

1. use the Precoded Sort name JNL, which will always include the journal title as the first item to be sorted;
2. use a Tailored Sort on the data element that includes the journal title information (this will vary among the databases - TA vs. TJ vs. SO).

Precoded Journal Sort

The format for using the Precoded Sort name JNL is shown in the following example:

```
PROG:
SEARCH TITLE, OR NONE-
USER:
SORT = JNL
```

The chart below summarizes how the SORT program will interpret the 'SORT = JNL' instruction in the named databases:

<u>DATABASE</u>	<u>MEANING OF JNL</u>
BIOETHICS.....	SO A, MI A, IM A
CANCERLIT.....	TA A, YR A, TI A*
EPILEPSY.....	SO A, YR D
HEALTH.....	TA A, DP D, VI D, IP D, PG A
HISTLINE.....	TA A, VI A, TI A
MEDLINE.....	} TA A, DP D, VI D, IP D, PG A
MED77.....	
MED75.....	
MED72.....	
MED69.....	
MED66.....	

*Currently being evaluated. Note that this is the only database using a separate data element for the date where the direction is ascending rather than descending.

DATABASE

MEANING OF JNL

POPLINE.....	TJ A, MI A, DP D, IM A, VI D
SDILINE.....	TA A, DP D, VI D, IP D, PG A
SERLINE.....	TA A
TOXLINE.....	} SO A
TOX74.....	
TOX65.....	

A = Ascending direction (A-Z, 0-9)
 D = Descending direction (9-0, Z-A)

The JNL sort format name:

1. is known across appropriate databases regardless of (a) the data elements that actually contain the journal/source information, and (b) the publication types found in a database; and
2. is recommended for OFFSEARCHes that will be searching dissimilar files.

Tailored Journal Sort

The format for using a Tailored Sort for journal titles in MEDLINE is shown below:

```

PROG:
SEARCH TITLE, OR NONE-
USER:
SORT = TA
    
```

Remember that you cannot say 'SORT = SO' in MEDLINE because the MEDLINE Source field is a composite field (i.e., made up of five other data elements). However, for TOXLINE, the instruction would have to be 'SORT = SO' because TOXLINE does not have a TA (Title Abbreviation) field, and its Source field is not a composite field.

A Tailored Sort for journal titles:

1. must be custom-made for each database, and may not be used across all databases indiscriminately;
2. is useful for an OFFLINE print or OFFSEARCH on similar files where a single data element sort is sufficient for your needs.

Remember that any sort is dependent on the data that is to be alphabetized. For example, the TOXLINE database, which is derived from eleven different secondary sources, does not have a standardized format for its SO (Source) field. A journal title from one subfile may be abbreviated with periods while another subfile may omit the periods, e.g.:

SS 3/C?
USER:
1 and 2
PROG:
SS (3) PSTG (17)

SS 4/C?
USER:
prt ti

NOTE: The relationship of the mammography causing the breast neoplasms is indicated by the use of the subheadings ADVERSE EFFECTS and ETIOLOGY. This is an example of a good use of subheadings to require a certain relationship between the disease and the diagnostic technique. Since mammography is frequently used in the diagnosis of breast neoplasms, searching without subheadings in this case would retrieve numerous citations to articles on the use of mammography in the diagnosis of breast neoplasms; these would be false drops in this search. Use of the subheading ETIOLOGY on the disease and the subheading ADVERSE EFFECTS on the test, expresses the relationship this search requires.

4. Retrieve citations on the occurrence of corneal cancer in young women.

SS 1/C?

USER:
exp corneal diseases
PROG:
SS (1) PSTG (808)

There is no MeSH heading corneal neoplasms, therefore you must coordinate as the indexer did.*

SS 2/C?

USER:

TIME OVFLW: CONT? (Y/N)

USER:
Y

(Searcher may receive more than one time overflow; continue answering "yes.")

PROG:
SS (4) PSTG (9)

SS 5/C?

USER:
prt ti

NOTE: The word "young" is not precise. The searcher would need to get a specific age group or age range from the patron. Also, remember that searching for a specific age might eliminate all retrieval. Perhaps the patron would be satisfied with this search. The subheading OCCURRENCE may be used, but may eliminate all retrieval because this is generally used to express a statistical concept within an article.

* If a specific neoplasm term is not available, e.g. CORNEAL NEOPLASMS is not a MeSH heading, the coordination here is between the disease term for the site and the most specific neoplasm term. If there were no term CORNEAL DISEASES, the searcher and indexer would have to use the site name, in this case CORNEA, and coordinate with the neoplasm term, EYE NEOPLASMS. This procedure is followed for all cancer terms for which there is no pre-coordinated MeSH heading.

PROG:
SUBHEADINGS CANCELLED.

SS 2/C?
USER:
1 and exp great britain
PROG:
SS (2) PSTG (7)

SS 3/C?
USER:
prt ti

NOTE: The subheading MANPOWER is not allowed by category with PHARMACISTS; SUPPLY AND DISTRIBUTION and UTILIZATION are not allowed with RADIOLOGY. This SUBS APPLY command can be used because the subheadings are automatically applied to the appropriate headings. Remember the "," in a SUBS APPLY command implies an "ORing" of terms. If one of the subheadings is not applicable to a search term, postings will be retrieved because an "OR" will give postings even if only one of the terms, e.g. PHARMACISTS/SD, retrieves postings. Be careful when using this type of SUBS APPLY command: know which subheadings are allowable with each term to be certain of what is searched and what is retrieved.

MeSH and Related Tools
ANNOTATED MESH
Exercise Answers

1. What do the following abbreviations mean?

- GEN - indicates that the heading is meant to be used for the general concept only. More specific headings exist and are preferred.
- IM - indicates that the heading is usually given a * by the indexers--so it will usually appear in Index Medicus with citations indexed to the term.
- NIM coord - means that heading should be used for coordination, but not for printing in Index Medicus.
- 65 - show that heading came into the system in 1965 as a major descriptor.
- 70(65) - shows that the heading came into the system in 1965 as a minor descriptor and was raised to major descriptor status in 1970.
- No qualif - means that no subheadings are allowed with this descriptor.
- SPEC: SPEC qualif - indicates that the heading is to be used for the concept of the specialty, the field or the practitioner and only the subheadings in the SPEC qualif list on p. LXII are allowed.
- A 11 qualif - means that only the subheadings in the A 11 qualif list on p. LXII are allowed with the heading.
- TN - indicates that there is a Technical Note with indexing instructions. The number of the specific Technical Note will accompany this designation.

2. When did "habitual abortion" come into the system?

listed in MeSH as an inverted heading, ABORTION, HABITUAL, has no date with it so it has been in the system as a major descriptor since the beginning.

3. Missed abortion is permitted with animals. Is eugenic abortion? Is legal abortion?

"Eugenic abortion," listed in MeSH as the inverted heading, ABORTION, EUGENIC, is a heading that may be used to index articles on animals. Although the annotation for this term does not indicate specifically, /vet permitted, this is indicated in the annotation for the term, ABORTION, INDUCED, the major descriptor to which the minor descriptor, ABORTION, EUGENIC "maps." Therefore, /veterinary, may be used in indexing to both terms and in searching both terms in the online system. (NOTE: remember terms indexed to the minor descriptor will appear in Index Medicus under the major descriptor ABORTION, INDUCED/vet. However, online, the minor descriptor, a more specific term, may be directly searched. This is true of any term that has the designation in the annotation "SEE UNDER _____".)

"Legal abortion," listed in MeSH as the inverted heading, ABORTION, LEGAL, may not be used to index articles on animals. The annotation states, "do not use.../vet."

4. How do I index "blood physiology?"

"blood physiology" is a non-MeSH term--BLOOD PHYSIOLOGY (NON MESH) available for "exploding" purposes only in searching the online system but not for indexing or searching by itself. This concept would be indexed, BLOOD/ph or specific element of the blood/ph.

5. What is a synonym for "blister?"

A synonym for "blister" is 'bulla' or 'vesication.' This is indicated by the backwards cross references in the annotation for the MeSH term, BLISTER, BLISTER, (X BULLA: X VESICATION).

6. Where is "blood picture" indexed?

"Blood picture" is probably indexed as BLOOD CELLS, or BLOOD CELL COUNT according to the annotation at the term, BLOOD.

7. May I search for an article using EXPEDITIONS/manpower?

An article should not be searched with main heading/subheading combination, EXPEDITIONS/manpower. The annotation indicates that /history is the only subheading allowed with this main heading.

8. How is "exercise" searched?

"Exercise" is searched in Index Medicus using EXERTION. The "see reference" or entry term EXERCISE, PHYSICAL refers you to the term used in Index Medicus. For searching online you may use EXERTION or the entry term, EXERCISE, PHYSICAL (but since EXERTION is shorter, it makes more sense to use this). Either term retrieves the same citations online. The annotation for EXERTION should be checked to determine allowable subheadings, date, etc., however.

9. May I search SNOW/adverse effects for frostbite from walking in the snow?

One may not search for SNOW/adverse effects. The annotation for SNOW indicates "no qualif," meaning no subheadings are allowed with SNOW.

10. When did WATER MOVEMENTS come into the system?

The heading, WATER MOVEMENTS, came into the system in 1972 as a minor descriptor, and was changed to a major descriptor in 1974. This is indicated in the heading's annotation by the date designation 74(72).

11. Where is "chemical water pollution" searched?

The concept "chemical water pollution" is searched as the inverted term, WATER POLLUTION, CHEMICAL (you might also want to consider WATER POLLUTANTS, CHEMICAL.)

12. May a cataloger catalog a book entitled "Chemical Water Pollution in the United States" under WATER POLLUTION, CHEMICAL/UNITED STATES?

A book entitled "Chemical Water Pollution in the United States" may be cataloged under WATER POLLUTION, CHEMICAL/U.S. Cataloging subheadings allowed are indicated in the annotation.

13. Where was "water-electrolyte imbalance" indexed before 1976?

The annotation indicates that before 1976 WATER-ELECTROLYTE IMBALANCE was a Non-MeSH term. Therefore, it could not be used as a term by itself for indexing, searching Index Medicus, or searching online (it could be "exploded" in an online search only, however).

14. Is WATER/poisoning permitted?

Use in indexing or searching of the main heading/subheading combination, WATER/poisoning, is not permitted. In the annotation for the term, WATER, (about half way through), it says "/pois & /tox = WATER INTOXICATION." This is the term that should be used to index and search this concept.

15. How do I search micro-organisms in water?

The concept of "micro-organisms in water" is searched using the term, WATER MICROBIOLOGY. The annotation under that term advises that this term be coordinated with the term for the specific microorganism.

16. An article on calcium absorption would be indexed under CALCIUM and ABSORPTION. Is CALCIUM printed in Index Medicus? Is ABSORPTION printed in Index Medicus?

Citations indexed to the heading, CALCIUM, a major descriptor, may be printed in Index Medicus.

Citations indexed to the heading, ABSORPTION, a major descriptor, would not print in Index Medicus under that term. The annotation indicates "almost never IM;" therefore an indexer would rarely asterisk (*) the term.

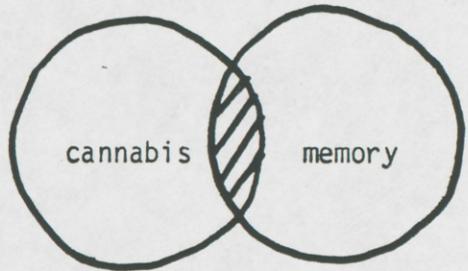

17. Why is BIOMETRY wrong for articles on a comparison of the size of men's and women's hands?

BIOMETRY is the wrong term for indexing and searching for articles on a comparison of the size of men's and women's hands because the annotation says "for human use probably ANTHROPOMETRY." Also according to TN 10--'on the basis of the Greek source meaning man,' restrict ANTHROPOMETRY to humans. If you need a term for the measurement of animals, BIOMETRY is the better term.

SEARCH STRATEGY

DEVELOP THE CHEMICAL CONCEPT:

1. Use CHEMLINE to obtain the Registry Number, synonyms and locators.
NBR the name (enter the name as is with multiple terms, hyphens, etc.)
3. If the name is present as SY or N1, search CHEMLINE with the appropriate qualifier.
4. If you can't locate the chemical, or the name has more than 39 characters use the name fragment (NF) field. Connect each name fragment with AND. Always remember to post qualify single numbers with (NF) or it may refer to a search statement.
5. Obtain the posting for the chemical. Print detail (DL) or full (FU). Check the ON field to determine if any of these registry numbers should also be used. Pick out several common synonyms (short words, easy to type names, name without numbers attached, possible names that authors might use). If an exhaustive search is required all the synonyms may be used as search terms.

DEVELOP THE BIOLOGICAL CONCEPT

1. Identify terms that express the biological concept using MeSH, textwords in abstracts and other known biological synonyms. Continue to add terms by scanning the retrieved citations for important terms.

For example some terms for developing tissues would be:
embryogenesis, fetus, fetal, development, cell differentiation,
angiogenesis, neurogenesis....

2. TOXLINE does not have checktags (except the portion from MEDLINE) for the easy retrieval of human or specific animal terms. A hedge must be developed if these terms are routinely needed.
3. To determine how to search for the biological concept, NBR some of the terms selected to determine if truncation is needed. If a term has several suffixes (ex: carcinogen...) then truncation would be used.
4. Use of words that are general terms in the file such as adverse effects, poisoning, toxicity, & mammals will retrieve many postings and may give a STORE POSTINGS OVERFLOW.

SEARCHING CHEMICAL/BIOLOGICAL CONCEPTS

1. Search for the chemical concept using the information obtained in CHEMLINE. Always use some synonyms OR'd with registry numbers because the TOXLINE file is not completely indexed with RN's.
2. Search for the biological concept using the TW qualifier.
3. Combine the chemical & biological concept together. The search can be narrowed further by scanning several citations for additional biological concepts.

When there is a small number of citations (not over 400) STRINGSEARCH can be used to narrow the retrieval to more specific references. STRINGSEARCH both the title and the abstract field. Example:
TS :VINYL#CHLORIDE: OR :VINYL#CHLORIDE: (TI)

STRINGSEARCH/SENTENCESEARCH
EXERCISE

1. Using retrieval from a text word search on Paget's disease, stringsearch for articles in English or German.

Create a stringsearch of the Language (LA) data element for the abbreviations ENG and GER-

```
SS 1 /C?  
USER:  
(TW) PAGET  
PROG:  
SS (1) PSTG (177)
```

```
SS 2 /C?  
USER:  
TS (LA) ENG OR GER
```

Note that in this case, the colons may be placed next to the first and last letters (:ENG:), one space away (: ENG :), or may be omitted entirely; the retrieval in all three will be the same. This is because each occurrence of the language element exist only as a three letter abbreviation. Also, remember that stringsearching directly searchable data elements such as language is only efficient if the retrieval set being stringsearched is less than 200.

2. Using the original retrieval on Paget's disease, stringsearch for articles that were published in 1981.

Three data elements contain year of publication information: the Source (SO), Year (YR), and the Date of Publication (DP) elements. However, because the Source and Year are generated from the citation (i.e., they are not "real" items of data attached to the citation), neither can be stringsearched. That leaves the Date of Publication. Note that the search statement number must be specified-

```
TS 1 (DP) :1981:           (remember not to add SS)
```

3. Articles on PL 93-641.

Begin by performing a preliminary Text Word search -

(TW) PL OR PUBLIC AND LAW

Use the NEIGHBOR command to decide whether or not to include PL93 and PL93641 as Text Words. Next stringsearch for the number, bearing in mind that the form could be 93641, 93-641, or 93 641-

TS (TI) :93641 : OR :93#641 : OR :93641 : (AB) OR :93#641 : (AB)

The colon is placed next to the 9 to allow for PL93...; the colon is placed one space away from the 1 to avoid numbers such as 6415.

4. Hepatic infusion. Limit to human and females.

The preliminary Text Word search (TW) HEPATIC AND INFUSION retrieves about 100 citations. Upon browsing, the searcher finds such phrases as "hepatic arterial infusion," "infusion hepatic angiography," and "hepatic arterial redistribution for intraarterial infusion." Noting that the words are not always immediately adjacent in a sentence, and wishing to retrieve citations in which the important words are in the same sentence but not necessarily adjacent, create a sentencesearch instruction.

9. In the TOXBACK74 file, how many citations are there on TIMOLOL?

- a. Is there any information on the use of Timolol in cases of angina AND hypertension? What is the Journal Source?
- b. Is there any newer publications on Timolol by the authors you found in response to question 10a?
- c. Is there any newer references in TOXLINE on the use of Timolol for angina OR hypertension?

PURPOSE: To search the TOXBACK74 and TOXLINE for a chemical/ biological concept.

SEARCH STRATEGY:

FILE CHEM

SS 1/C? TIMOLOL (SY)
SS 2/C? PRT FU

FILE TOX74

SS 1/C? 26839-75-8 OR TIMOLOL
SS 2/C? 1 AND ANGINA AND HYPERTENSION
SS 3/C? PRT

Note: 2 citations retrieved; they are duplicate records but the TOXBIB record has no abstract.

FILE TOX

SS 1/C? 26839-75-8 OR TIMOLOL
SS 2/C? 1 AND ANGINA OR 1 AND HYPERTENSION
SS 3/C? 1 AND BROGDEN RN:

Note: A SAVE search could be used here between TOX74 & TOX

CLINPROT INDEX TERMS

APRIL 1982

The frequencies appearing on the attached list are included to assist you in formulating searches before going online.

All terms preceded by an asterisk (*) are broad category terms, which are not used to index records. The frequency number following these terms represents the total number of projects indexed to specific terms indexed under the broad category. You will receive a No Postings message should you enter an asterisk term in CLINPROT.

To retrieve protocols using Subject Captions, (SC), the most specific terms must be used. When all protocols within a broad category are desired, one must enter the Hierarchical Subject Code in truncated form.

* - broader

<p>COVERAGE</p>	<p>1963 TO PRESENT</p>	<p>MOST RECENT 2-3 YEARS</p>	<p>PROTOCOLS ACTIVATED SINCE 1976: ACTIVE, CLOSED, TERMINATED</p>
<p>DATE FREQUENCY</p>	<p>EVERY MONTH</p>	<p>EVERY 3 MONTHS</p>	<p>EVERY 3 MONTHS</p>
<p>PRESENT NUMBER</p>	<p>303,808</p>	<p>21,117</p>	<p>3,088</p>

BASIC COMMANDS/PROGRAM MESSAGES

1. Which authors are filed alphabetically around your name?

Type the NEIGHBOR command (can be abbreviated NBR), a space, your last name, another space, and one or two initials. For example:

```
SS 1 /C?  
USER:  
NBR HILL L
```

To limit to authors' names, type (AU) after the name: NBR HILL L (AU)

2. Using the NBR or FIND command, find the number of postings for the term BRAIN CHEMISTRY.

Type the command or its abbreviation preceding the term. For example:

```
SS 1 /C?  
USER:  
FIND BRAIN CHEMISTRY           (also NBR BRAIN CHEMISTRY)
```

3. Cause a *NONE message to appear by using two terms with the AND logical operator.

Use the AND logical operator to combine two terms. For example:

```
SS 2 /C?  
USER:  
HILL L AND BRAIN CHEMISTRY
```

4. Cause a NP--NO POSTINGS message to appear.

Misspell any word. For example:

```
SS 3 /C?  
USER:  
MALPRACTISS
```

5. Type OBESITY AND HEART DISEASES. Now combine those terms using 2 search statements, then 3.

In one search statement - OBESITY AND HEART DISEASES

In two search statements - SS 4 /C?
USER:
OBESITY
PROG:
SS (4) PSTG (#)

```
SS 5 /C?  
USER:  
4 AND HEART DISEASES  
SS (5) PSTG (#)
```

5. (cont'd)

In three search statements - SS 6 /C?

USER:
OBESITY
PROG:
SS (6) PSTG (#)

SS 7 /C?

USER:
HEART DISEASES
PROG:
SS (7) PSTG (#)

SS 8 /C?

USER:
~~5 AND 6~~ *and 7*
SS (8) PSTG (#)

6. From the posting received in #5 (above):

- a. Print 2 citations (author, title, source)
PRINT 2
- b. Print 3 titles
PRINT 3 TI
- c. Print the 2nd citation in full
PRINT 1 FULL SKIP 1
- d. Print the source and journal title code of 1 citation
PRINT SO, JC 1
- e. Print indented the 2nd and 3rd citations
PRINT 2 INDENTED SKIP 1
- f. Print 1 detailed
PRINT 1 DETAILED
- g. Print offline, using the following information:
Your name (ONLINE TRAINING CLASS)
MMS
NLM
Be sure to cancel the offline printout
PRINT OFFLINE
- h. Print 3 titles from search statement 2
PRINT 3 TI SS 2

7. DISPLAY your search.
DISPLAY
8. Using RESTACK, save your first and last search statements.
RESTACK 1,8
9. Use ERASEALL.
ERASEALL
10. List the first two items in the NEWS.
NEWS
reply "yes" when asked: MORE NEWS? (YES/NO)
11. Send a COMMENT to MEDLARS Management Section.
COMMENT
PROG:
CONT- OR FINISHED-
Begin typing your message
12. Which files are available to your code?
FILES
13. Type EXPLAIN CHEMLINE to print out an explanation of the database.
EXPLAIN CHEMLINE
14. Neighbor WATER without a qualifier, with a qualifier.
NBR WATER
NBR WATER (TW)
15. Log off the system.
STOP
DONE? (YES/NO) (This question may be pre-answered by typing STOP Y.)
YES
