

## PREFACE

These "Bibliographies of the World at War" are periodical cumulations of a weekly annotated index of material relating to the war in its various aspects. This material comes into the Library of Congress and into some of the Departmental and specialized libraries in Washington. It represents a selection from several thousand periodicals, books and pamphlets. In making the selection, emphasis is placed upon the economic and social aspects of the war effort, since the current index is prepared as a joint project of the National War Agencies and the Library of Congress. Increasing emphasis is placed on the impact of the war upon political conditions and institutions. Stress has always been laid upon postwar problems. Highly technical engineering, military, and medical articles and books are not covered.

The cumulations as a whole have been brought together under ten subject divisions, noted below. The basic cumulation covered the first year of the project, from April 1, 1941 to May 31, 1942. The first series of supplements covered the nine months from the first of April 1942, to the end of the year. Supplement No. 2, presented herewith, covers the first five months of 1943. The titles of the separate cumulations indicate roughly the coverage of each of the bibliographies.

- I. Political Developments and the War
- II. Agriculture in a War Economy
- III. Natural Resources and Raw Materials
- IV. Industry in Wartime
- V. Labor in Wartime
- VI. Economics of War
- VII. Civilian Defense
- VIII. Social and Cultural Problems in Wartime
- IX. Conduct of the War
- X. Postwar Planning and Reconstruction

## CIVILIAN DEFENSE

### BIBLIOGRAPHIC NOTE

This issue of Bibliographies of the World at War, No. VII, supplements the earlier numbers on the same topic and covers the months of January through May 1943. It includes books, pamphlets and periodical articles published for the most part during the period in question, selected from the daily flow of materials into the Library of Congress and certain other libraries in Washington.

The publications of the U.S. Office of Civilian Defense (Washington) and the British Ministry of Home Security (London), are the official sources of information about national defense. Training manuals, bulletins, guides and charts issued by the various state and local defense councils also contain useful information. Few references to civilian defense in Europe are available, since current publications from Germany and Occupied Europe have failed to arrive, or are arriving slowly.

For the purposes of this bibliography, material on public utilities have been drawn largely from PUBLIC UTILITIES (Washington), GAS AGE (New York), ELECTRICAL ENGINEERING (New York), ELECTRICAL WORLD (London), ENGINEERING NEWS-RECORD (New York), and JOURNAL OF THE AMERICAN WATER WORKS ASSOCIATION (New York). Medical aspects of civilian defense are frequently discussed in current numbers of the JOURNAL OF THE AMERICAN MEDICAL ASSOCIATION (Chicago), HOSPITALS (Chicago), and THE AMERICAN JOURNAL OF NURSING (New York). Engineering and architectural magazines are the standard source of articles about structural defense and the protection of special objects.

The references listed here pertain general to the air raid precautions and other protectional aspects of civilian defense. Material closely related to certain aspects of some of the topics included here will be found in other numbers of the series:

- No. I, Political Developments and the War includes material on the legal aspects of sabotage and espionage.
- No. IV, Industry in Wartime includes material on industrial camouflage and protection of industrial plants against attack from the air and against sabotage.
- No. VIII, Social and Cultural Problems in Wartime includes materials on civilian morale.
- No. IX, Conduct of the War includes material on military defense against sabotage.
